BOOK VI

OF UNDER-SHRUBS.

Of the classification of under-shrubs the wild kinds: the chief distinction that between spinous and spineless.

I. We have spoken already of trees and shrubs, and next we must speak of under-shrubs and herbaceous plants and of any other natural classes which are included with these, for instance, cereals come under herbaceous plants.

But first let us tell of under-shrubs, for this class comes near those mentioned above because of its woody character. Now it may be said that with all plants the wild kinds are more abundant than the cultivated, and this is certainly true of the undershrubs. For the cultivated kinds of this class are not numerous, and consist almost entirely of coronary plants, as rose gilliflower carnation sweet marjoram martagon lily, to which may be added tufted thyme bergamot-mint calamint southernwood. For all these are woody and have small leaves; wherefore they are classed as under-shrubs. This class covers

given in 1, 3 1, nor do some of the plants here mentioned come under the description. St considers the text defective.

όμοίως, οίον ράφανος πήγανον καὶ ὅσα παραπλήσια τούτοις ἐστίν. ὑπὲρ ὧν οὐχ ἦττον ἴσως
ἄρμόττει κατὰ τὴν οἰκείαν προσηγορίαν εἰπεῖν,
ὅταν περὶ στεφανωμάτων καὶ λαχάνων ποιώμεθα
μνείαν. νῦν δὲ πρῶτον περὶ τῶν ἀγρίων λέγωμεν.
ἔστιν αὐτῶν εἴδη καὶ μέρη πλείω, ἃ δεῖ διαιρεῖν
καὶ τοῖς καθ' ἔκαστον γένος καὶ τοῖς ὅλοις εἴδεσι.

Μεγίστην δ' ἄν τις λάβοι διαφοράν τῶν ὅλων γενῶν, ὅτι τὰ μὲν ἀνάκανθα τὰ δὲ ἀκανθώδη τυγχάνει. πάλιν δ' ἐν ἑκατέρω τούτων πολλαὶ διαφοραὶ γενῶν καὶ εἰδῶν, ὑπὲρ ὧν καθ' ἑκάτερα

πειρατέον είπειν.

Των ακανθικών δη τὰ μεν άπλως είσιν ἄκανθαι, ωσπερ ἀσφάραγος καὶ σκορπίος οὐ γὰρ ἔχουσι φύλλον οὐδὲν παρὰ τὴν ἄκανθαν. τὰ δὲ φυλλάκανθα, καθάπερ ἄκανος ήρύγγιον κνήκος ταθτα γὰρ καὶ τὰ τοιαῦτα ἐπὶ τῶν φύλλων ἔχει τὴν άκανθαν, δι' δ καὶ φυλλάκανθα καλείται. τὰ δὲ καὶ παρὰ τὴν ἄκανθαν ἔτερον ἔχει φύλλον, ὥσπερ ή ονωνίς και ο τρίβολος και ο φέως, ον δή τινες καλοῦσι στοιβήν. ὁ δὲ τρίβολος καὶ περικαρπιάκανθός ἐστιν ἔχει γὰρ ἀκάνθας ἐν τῷ περικαρπίω, δι' δ καὶ τοῦτο ίδιον πρὸς ἄπαντα ώς εἰπεῖν ἐπεὶ πτορθάκανθά γε πολλά καὶ τῶν δένδρων καὶ τῶν θαμνωδῶν ἐστιν, οἶον ἀχρὰς ῥόα παλίουρος βάτος ροδωνία κάππαρις. Εν μεν οθν τοίς ακανθικοίς ταύτας αν τις ως είπειν τύπω λάβοι τὰς διαφοράς.

¹ ἔστιν... εἴδεσι: text needlessly altered by Sch. and W. Sch. himself shews that T. uses εἶδος and γένος almost indiscriminately. Here τῶν ὅλων γενῶν means the same as τοῖς

ENQUIRY INTO PLANTS, VI. 1. 2-3

also pot-herbs, such as cabbage rue and others like them. Of these it is perhaps more appropriate to speak under their proper designation, that is, when we come to make mention of coronary plants and pot-herbs. Now let us first speak of the wild kinds. Of these are several classes and subdivisions, which we must distinguish by the characteristics of each sub-division as well as by those of each class taken as a whole.¹

The most important difference distinguishing class from class which one could find is that between the spineless and the spinous kinds. Again under each of these two heads there are many differences distinguishing kinds and forms, of which we must

endeavour to speak severally.

² Of spinous kinds some just consist of spines, as asparagus and skorpios; for these have no leaves except their spines. Then there are the spinous-leaved plants, as thistle eryngo safflower; these and the like have their spines on the leaves, whence their name. Others again have leaves as well as their spines, as rest-harrow caltrop and pheos, which some call stoibe. Caltrop is also 4 spinous-fruited, having spines on the fruit-vessel. Wherefore this peculiarity marks it off from almost all other plants; though many trees and shrubs have spines on the shoots, as wild pear pomegranate Christ's thorn bramble rose caper. Such 5 are the general distinctions which may be made among spinous plants.

δλοις είδεσι, and below γενών and είδων both refer to the smaller divisions called μέρη above 2 Plin 21 91.

ENQUIRY INTO PLANTS, VI. 1. 4-II. 2

With spineless plants it is not possible to make such 'generic' distinctions; for the variation of the leaves in size and shape is endless, and the differences are not clearly marked 1; but we must try to distinguish on another principle. There are many classes of such plants and they differ widely, as rock-rose 2 bryony madder privet 3 kneoron marjoram savory sphakos 4 (sage) elelisphakos 5 (salvia) horehound konuza balm, and others like these; and in addition to these we have the plants with a ferulalike stem 6 or with a stem composed of fibre, as fennel horse-fennel narthelia (ferula) narthex (ferula) and the plant called by some wolf's bane,8 and others like these. All these, as well as any other ferulalike plants, may be placed in the class of undershrubs.

Of spineless under-shrubs and their differences.

II The various forms and the differences between the above mentioned plants are in some cases more, in some less easy to distinguish. Of rock-rose 9 they distinguish two kinds, 'male' and 'female,' in that the one is 10 larger, tougher, more glossy, 11 and has a crimson flower; both however are like the wild rose, 12 save that the flower is smaller and scentless.

There are also two kinds of kneoron, one white, the other black The white has a leathery oblong

examples given here the two classes are taken together, ναρθηκία being ναρθηκάδης, the others ἐννευρόκανλα, hence the article is not repeated 7 cf. 6 2 7

² Apparently an afterthought, suggested by the mention of the woodness of the branches

ENQUIRY INTO PLANTS, VI. II. 2-4

leaf, somewhat like that of the olive; the leaf of the black is like that of the tamarısk 1 and fleshy; the white grows more on the ground and is scented, while the black is scentless. In both the root, which runs deep, is large (and the branches which divide at the ground level are numerous thick and woody), and the root is also very woody. 2 It is also very tough, wherefore it is used for binding and to put 3 round things, like the withy. It grows and flowers after the autumnal equinox, and remains in flower a long time.

⁴ Of marjoram the black form is barren, the white bears fruit ⁵ There is a black and a white thyme, and it flowers very freely: it is in bloom about the summer solstice. It is from this flower that the bee gets the honey, and by it ⁶ beekeepers say that it is made known whether they have a good yield of honey or not; for, if the thyme flowers abundantly, ⁷ they have a good yield, but the bloom is injured or

even destroyed if it is rained upon.

Savory, and still more marjoram, has a conspicuous fruitful seed, but in thyme it is not easy to find, being somehow mixed up with the flower; for men sow the flower and plants come up from it. ⁸ This plant is sought and obtained by those in Athens who wish to export such herbs—But it has a peculiarity as compared both with similar plants and with most others, namely the kind of region which it affects ⁹; they say that it can not be grown or become

ENQUIRY INTO PLANTS, VI. 11. 4-6

established where a breeze from the sea does not reach. This is why it does not grow in Arcadia, while savory marjoram and such plants are common in many parts. (A similar peculiarity is found in the olive; for it appears that it likewise will not grow more than three hundred furlongs from the sea.)

The difference between sphalos 2 (sage) and elelisphakos (salvia) is like that between cultivated and wild; for the leaf of sphalos 3 is smoother smaller and less succulent, 4 while that of elelisphakos is

rougher 5

There are also two kinds of horehound: one has a narrow leaf with a more jagged edge, and the notches are very conspicuous and deep, and this is the plant used by druggists for certain purposes, the other has a rounder 6 leaf, which, like that of sphahos, is not at all succulent; the notches are less conspicuous and

the edge less jagged.

Of konyza, there is a 'male' and a 'female' kind, the differences between them being such as are usual between forms so distinguished, the 'female' has slenderer leaves, is more compact, and a smaller plant, the 'male' is larger, has thicker stalks, is more branched, has larger glossier leaves, and moreover the flower is more conspicuous. Both bear fruit; the plant as a whole is late in growing and in blooming, it blooms about the rising of

⁴ The form of expression in the repeated ὑπὲρ seems loose,

ENQUIRY INTO PLANTS, VI. 11. 6-8

Arcturus and is full grown 1 after his setting. The smell of the 'male' plant is strong, but that of the 'female' more pungent; wherefore both of them are of use against wild beasts.²

These plants then and others like them have, as it were, different forms. Again there are some which have but one form both among those already mentioned and others as well, for there are numerous

plants of this class.

3 The class of ferula-like plants (for this too belongs to the under-shrubs) comprises many kinds: here we must first speak of the characteristic which is common to all, including ferula itself 4 (narthex) and narthekia, whether they both belong to the same kind and differ only in size, or whether, as some say, they are distinct. The obvious character of both is alike, except as to size; for narthex grows very tall, while narthekia is a small plant. Each of them has a single stalk, which is jointed; from this spring the leaves and some small stalks; the leaves come alternately-by which I mean that they do not spring from the same part of the joint, but in alternating rows. For a considerable distance they embrace the stalk, like the leaves of the reed, but they turn back from it more owing to their softness and their size; for the leaf is large soft and much divided, so that it is almost hair-like; the largest leaves are the lowest ones next the ground, and so on in proportion. The flower is quince-yellow 5 and inconspicuous, the fruit 6 like dill, but larger.7 The

and above ϵ_{ν} of s is hardly satisfactory. Sch. suspects corruption.

plant divides at the top and has some small branches, on which grow the flower and the fruit. It also bears flowers and fruit on the side-stalks all the way up, like dill. The stalk only lasts a year, and the growth takes place in spring, the leaves growing first and then the stem, as with other plants. It roots deep and has but a single root. Such is the ferrila.

Of the others some to a certain extent resemble ferula, that is, in having a hollow stem 1; for instance deadly nightshade hemlock hellebore asphodel 2; while some have a stem more or less, as it were, consisting of fibre, 3 as fennel aconite and others like these. The fruit of deadly nightshade 4 is peculiar in being black and like a grape and like wine in taste.

Of certain specially important spineless under-shrubs—silphium and magydaiis—belonging to ferula like plants.

III Most important and peculiar in their characters are the silphium and papyrus of Egypt. These too come under the class of ferula-like plants; of these we have spoken 5 of the papyrus already under the head of plants living in water; of the other we have now to speak

⁶ The silphium has a great deal of thick root; its stalk is like ferula in size, and is nearly as thick; the leaf, which they call maspeton, is like celery: it has a broad fruit, which is leaf-like,

of $\mu a \nu \delta \rho a \gamma \delta \rho a s$ are described there being only two known species of mandragora, the third may be atropa Belladonna, and to this plant may also refer an interpolated sentence in Diosc 4 73 ($\alpha \nu \delta \sigma s$) $\sigma \tau a \phi \nu \lambda \dot{\eta} \nu$)

⁵ 4 8 3 and 4 Papyrus is loosely classed with ferula-like plants, as it has not a hollow stem ⁶ Plm 19. 42-45.

ENQUIRY INTO PLANTS, VI. m. 1-3

as it were, and is called the phyllon. The stalk lasts only a year, like that of ferula Now in spring it sends up this maspeton, which purges sheep and greatly fattens them, and makes their flesh wonderfully delicious; after that it sends up a stalk, which 2 is eaten, it is said, in all ways, boiled and roast, and this too, they say, purges the body in forty days. It has two kinds of juice, one from the stalk and one from the root; wherefore the one is called 'stalk-juice,' the other 'root-juice.' root has a black bark, which is stripped off. have regulations, like those in use in mines,8 for cutting the root, in accordance with which they fix carefully the proper amount to be cut, having regard to previous cuttings and the supply of the plant. For it is not allowed to cut it wrong nor to cut more than the appointed amount; for, if the juice is kept and not used, it goes bad and decays When they are conveying it to Peiraeus, they deal with it thus 4:having put it in vessels and mixed meal with it, they shake it for a considerable time, and from this process it gets its colour, and this treatment 5 makes it thenceforward keep without decaying. are the facts in regard to the cutting and treatment.

The plant is found over a wide tract of Libya, for a distance, they say, of more than four thousand furlongs, but it is most abundant near the Syrtis, starting from the Euesperides islands. It is a peculiarity of it that it avoids cultivated ground, and, as the land is brought under cultivation and tamed,

it retires, plainly shewing that it needs no tendance but is a wild thing. The people of Cyrene say that the silphium appeared is seven years before they founded their city; now they had lived there for about three hundred years before the archorship at Athens of Simonides is

Such is their account. Others however say that the root of the silphium grows to the length of a cubit or a little longer, and in the middle of this is a head,³ which is the highest part and almost comes above ground, and is called the 'milk',⁴ from this then presently grows the stalk, and from that the magydaris,⁵ which is also called the phyllon⁶; but it⁷ is really the seed, and, when a strong south wind blows after the setting of the dog-star, it is scattered ⁸ abroad and the silphium grows from it. The root and the stalk grow in the same year; nor is this a singular feature—unless they mean that it grows immediately after the dispersal ⁹ of the seed—since the same thing occurs with other ¹⁰ plants also.

There is this singular statement, which is inconsistent with what was said above, that, it is said, it is necessary to dig the ground every year, and that, if it be left alone, it bears 11 the seed and the stalk, but these are inferior and so is the root; on the other hand, that with digging they are improved because the soil is changed. (This is inconsistent with the statement that silphium avoids cultivated land.) They add that the roots are cut up into vinegar and eaten fresh, and that the leaf is of a golden

ENQUIRY INTO PLANTS, VI. III. 5-IV. I

colour. We have also the inconsistent statement that sheep are not purged by eating the leaves; for they say that in spring and in winter they are driven into the hill-country, where I they feed on this and on another plant which is like southernwood; both these plants appear to be heating and not to cause purging, but, on the contrary, to have a drying effect and promote digestion. It is also said that, if a sheep which is sick or in bad condition comes to that district, it is quickly cured or else dies, but usually it recovers. Which of these accounts is true is matter for enquiry.

The plant called magydans is distinct from silphium, being of later growth and less pungent, and it does not produce the characteristic juice; experts can also easily distinguish it by its appearance. It grows in Syria and not in Cyrene, and they say that it is also abundant on Mount Parnassus, and some call it silphium. Whether however, like silphium, it avoids cultivated ground is matter for enquiry, as also whether it has any resemblance or likeness in leaf and stalk, and, in general, whether it produces a juice. In these examples we may consider the class of ferula-like plants [and, in general, that of spinous plants.⁴]

Of spinous under-shrubs and their differences.

IV. Taking next the class of spinous plants (for we must next speak of them), we have already distinguished 5 those which are altogether spinous and those which have spinous leaves, and now we must

speak of each of these classes separately, and also, in the third place, of those which have leaves as well as their spines, such as pheos 1 and caltrop Moreover caper has the peculiarity of possessing not only spines on its stems but also a spinous leaf. Of the classes thus distinguished that with spinous leaves is the largest, while that which is altogether spinous is about the smallest. It is indeed, as was said, a very small class, and it would not be easy to find examples of such plants besides asparagus and

skorpios.2

³ Both of these flower after the autumnal equinox. Shorpios produces its flower in the fleshy swelling 4 below the top 5 of the spinous twig; at first it is white, but afterwards it becomes purplish Asparagus produces alongside of the spines a small knob, and from this grows the flower, which is of small size has a single root which runs deep; asparagus roots very deep and its roots are numerous and matted, the upper part of them being in one piece,8 and from this the actual shoots spring The stalk comes up from the plant in spring and is edible; afterwards, as the season advances, it acquires its rough and spinous character 7; the bloom appears not only on this stalk, but on those of previous years, for the Such is the character of stalk is not annual plants which are altogether spinous

⁸Of those which have spinous leaves the largest class, one may say, consists of those plants which

are thistle-like. 1 by which 2 I mean that the swollen part, that part which contains the flower, or, it may be, the fruit, is in all cases a thistle-head,3 or has that appearance. However there are differences in the 'head' itself, in size shape colour number of spines and in other respects. For, apart from quite a few plants, such as soap-wort sow-thistle and possibly some others, nearly all the rest have this character (even sow-thistle 4 has a spinous character, but its seed-process is different). The list includes all the following: ahorna 5 milk-thistle khalkeios safflower polyakanthos distaff-thistle onopyros wine chamaeleon (the last-named, however, has not spinous leaves, though golden thistle, which is also called 'meadow-thistle,' 6 has 7), and so on, for there are many more. These differ from one another not only in the aforesaid ways, but in that some of them have many stalks and side-growths, like the pinethistle, while some have a single stalk and no sidegrowths, like the safflower, and some again have out-growths above from the top of the plant, like the globe-thistle 8 Again some grow directly the first rains come, others at a later time, some again in summer, as the plant which some call yellow starthistle, and ixine 9 So too 10 the flowering-time differs: golden thistle blooms late 11 and is in bloom for a long time

ENQUIRY INTO PLANTS, VI. 1v. 5-6

Pine-thistle 1 has but one kind, but there are different kinds of safflower, the wild and the cultivated. Again of the wild kind there are two forms, one very like the cultivated except that the stalk is straighter; wherefore in ancient times women sometimes used it to make distaffs? It has a fruit which is black large and bitter. The other is leafy, and its stalks are like those of the sow-thistle,3 so that to some extent it comes to have a prostrate stem; for on account of the softness of the stalks 4 it bends down towards the ground, and it has a small 5 fruit, which is beaided. All the forms produce abundant seed,6 but it is larger 7 and more crowded in the wild forms. This kind has also a peculiarity as compared with other wild plants; these are usually coarser and more spinous than the cultivated forms, but in this plant the wild form is softer and smoother

The alorna resembles in a general way in appearance the cultivated safflower, but has a yellowish colour and a sticky juice § There is also a plant called distaff-thistle, which is whiter than these. A peculiarity of the leaf of this is that, if it is stripped off and applied to the flesh, the contact makes the juice blood-coloured," wherefore some call this kind of spinous plant 'blood-wort'; also it has an abominable smell, like that of blood, it matures its fruit late,

towards autumn. Indeed, generally speaking, all plants like the thistle-tribe ¹ are late fruiting. All these plants grow both from seed and from the root, so that there is but a short period between the beginning of growth and the maturing of the seed.

Golden thistle has not only this peculiarity, that it has a root which is edible, whether boiled or raw, but the root is best when the plant is in flower, and, as it becomes hard, it produces a juice. The flowering

time 2 is also peculiar, about the solstice.

The root of the sow-thistle is also fleshy and edible; but the swollen part is elongated and not thistle-like; and, alone of the spinous-leaved plants, it has this peculiarity, in which it is the reverse of the chamaeleon, for that plant, though it has not spinous leaves, has a thistle-like flower-head). The flower of the sow-thistle, as it ages, turns into down, as do that of the dandelion the tamarisk and other plants like these. In its growth there is a succession up to the summer, part forming flowers, part flowering, and part producing seed this that little moisture in it and has a sharp point. The leaf, as it dries, becomes flaccid and no longer pricks

Ixine does not grow in many places, and it has leaves on the root. From the middle of the root grows the seed-bearing thistle-head, which is like

both of the plants which he calls χαμαιλέων (see Index) have spinous leaves

an apple and well hidden by 1 the leaves; this on its head produces its gum, 2 which is pleasant to the taste, and this is the 'thorn-mastich.' 3 These plants and others like them are found almost everywhere

⁴ But the plant called *haktos* (cardoon) grows only in Sicily, and not in Hellas. It is a plant quite different from any other; for it sends up straight from the root stems which creep on the ground, and its leaf is broad ⁵ and spinous: these stems are called *kaktoi*; they are edible, if peeled, and are slightly

bitter, and men preserve them in brine.

There is another kind which sends up an erect stem, called the *pternix*. This too is edible, but cannot be preserved. The fruit-vessel, which contains the seed, is in shape like a thistle-head ⁶. and when the downy seeds are taken off, this too is edible and resembles the 'biain' ⁷ of the palm; and it is called *skahas* ⁸ Such are the different characteristics in the light of which we may observe the spinous-leaved plants.

V. Examples of plants which have leaves as well as spines are *pheos* 9 rest-hairow star-thistle caltrop 'horse-*pheos*' 10 (spurge) butcher's broom 11 . . , 12 and it has a fleshy leaf it is much divided and has

ENQUIRY INTO PLANTS, VI. v. 1-3

many roots, but is not deep-rooting. It grows at the rising of the Pleiad, the first seed-time, and then puts forth its leaf, for it is not annual, but lives

longer than one year

³ Caper, as was said, is quite distinct from these; it has a spinous leaf and a spinous stem, whereas pheos ⁴ and 'horse-pheos' have no spines on their leaves ⁵; it has a single ⁶ root, is low-growing, ⁷ and has a creeping stem; it grows and flowers in summer, and the leaf remains green till the rising of the Pleiad. It rejoices in sandy light soils, and it is said that it is unwilling to grow on cultivated land, and that though it grows near towns and in good soil, and not, like sliphium, in mountain country. This account however ⁸ is not altogether accurate.

⁹A peculiarity of caltrop is that it is spinous-fruited ¹⁰ There are two kinds; one has a leaf like that of chick-pea, the other has spinous leaves Both are low-growing and much divided, but the spinous-leaved form grows later and is found near enclosures. The seed of the early kind is like that of sesame, that of the late kind is round and blackish and enclosed in a pod. These may serve as examples of plants which have spines as well as leaves ¹¹

12 Rest-harrow has spines on the shoots, the leaf,

which is annual, 18 is like that of rue, and grows right along the stem, so that the general appearance is

that of a garland. I the leaves being set at intervals alternately along it 2; the flower is irregular,3 and the fruit contained in a pod.4 which is not divided into compartments 5 It grows in sticky rich soil and especially in sown and cultivated land; wherefore it is an enemy to husbandmen, and it is hard to kill: for, when it gets hold of a piece of ground, it immediately pushes its roots down deep,6 and every year it sends up new growths at the sides and the next year 7 it roots these again Wherefore it has to be dragged up entire 8, this is done when the ground has been moistened, and then it is easier to destroy. But, if but a small piece is left, it shoots again from this. It begins to grow in summer and completes its growth in autumn Let these examples serve for a survey of the wild forms of under-shrubs.

Of cultivated under-shrubs (coronary plants), with which are included those coronary plants which are herbaceous.

VI The cultivated kinds need but a brief survey; these 9 come under the class of coronary plants.

Of coronary plants we must endeavour to give a general account, so that the whole class may be included. This group has a somewhat peculiar position, since it overlaps partly the under-shrubs, partly the herbaceous plants; wherefore the latter must also be included and we must mention them as occasion serves, taking first the under-shrubs.

¹ These may be divided into two groups according to their uses. Of some only the flower is serviceable; and of these some are sweet-scented, as gulliflower, some scentless, as carnation 2 and wallflower. Of others again the branches leaves and in fact the whole growth are sweet-scented, as with tufted thyme calamint bergamot-mint and the rest. Both groups however belong to the under-shrubs. And of the first-mentioned, those valued for their flowers, the growth is in most 3 cases that of undershrubs, (in some annual merely, in others of longer duration) except in the violet; for this is altogether without branches, its leaves grow close to the root, and it is always in leaf, while, as some say, it is able to bear flowers continuously, if it is tended in a certain way This may be considered a peculiar characteristic of this plant.

Of the others, or rather of all the group, the general appearance is in each case plain to all, any peculiarities that they may exhibit we must mention, for instance, if 4 some appear to have but a single form, while others have various forms.

Thus 5 those of woody character, as tufted thyme bergamot-mint calamint, have but one form, unless one counts wild and cultivated, scented and scentless plants, as belonging to distinct forms; and again there are with these plants differences of culture of position and of climate Some also 6 of the group valued for their flowers 7 have each but one form, for instance, the black 2011 (violet); for this does not appear to have different forms

like the white ion (gilliflower) in which the colour evidently varies; as does still more that of the liles, if it be true, as some say, that there is a crimson kind.¹

² Among roses there are many differences, in the number of petals, in roughness,3 in beauty of colour, and in sweetness of scent Most have five petals, but some have twelve or twenty, and some a great many more than these, for there are some, they say, which are even called 'hundredpetalled' Most of such roses grow near Philippi; for the people of that place get them on Mount Pangaeus, where they are abundant, and plant them. However the inner petals 4 are very small, (the way in which they are produced being such that some are outside, some inside) Some kinds are not fragrant nor of large size Among those which have large flowers those in which the part 5 below the flower is rough are the more fragrant. In general, as has been said, good colour and scent depend upon locality; for even bushes which are growing in the same 6 soil shew some variation in the presence or absence of a sweet scent. Sweetestscented of all are the roses of Cyrene, wherefore the perfume made from these is the sweetest. (Indeed it may be said generally that the scents 7 of the gilliflowers 8 also and of the other flowers of that place are the purest, and especially the

ENQUIRY INTO PLANTS, VI. vi. 5-8

scent of the saffron-crocus, a plant which seems to vary in this respect more than any other) Roses can be grown from seed, which is to be found below the flower in the 'apple,' and is like that of safflower or pme-thistle, but it has a sort of fluff, so that it is not unlike the seeds which have a pappus. As however the plant comes slowly from seed, they make cuttings of the stem, as has been said, and plant them If the bush is burnt or cut over, it bears better flowers; for, if left to itself, it grows luxuriantly and makes too much wood. Also it has to be often transplanted; for then, they say, the roses are improved. The wild kinds are lougher both in stem and in leaf, and have also smaller flowers of a duller colour.

⁴ The black *ion* (violet) differs from the white *ion* (gilliflower) not only in other respects but in the plant itself, in that in the former the leaves are broad, he close to the ground, and are fleshy, and there is much root.

⁵ Kiina (lilies) shew the variation in colour which has been already mentioned ⁶ The plant has in general a single stem, but occasionally divides into two, which may be due to differences ⁷ in position and climate. On each stem grows sometimes one flower, but sometimes more; (for it is the top of the stem which produces the flower ⁸) but this sort is less common. There is an ample root, which is fleshy and round. If the fruit is taken off, it

ENQUIRY INTO PLANTS, VI. vi. 8-10

germinates and produces a fresh plant, but of smaller size; the plant also produces a sort of tear-like exudation, which men also plant, as we have said ¹

The narcissus ² or *leirnon* (for some call it by the one name, some by the other) has its ground-leaves like those of the asphodel, ³ but much broader, like those of the *krinon* (hly), its stem is leafless and grass-green ⁴ and bears the flower at the top; the fruit ⁵ is in a kind of membrane-like vessel, and is very large, black in colour, and oblong in shape. This as it falls germinates of its own accord; however men collect and set ⁶ the seed, and also plant the root, which is fleshy round and large. The plant blooms very late, ⁷ after the setting of Aicturus about the equinox.

⁸ The saffron-crocus is herbaceous in charactei, like the above-mentioned plants, ⁹ but has a narrow leaf; indeed the leaves are, as it were, hair-like; it blooms very late, and grows either late or early, according as one looks at the season ¹⁰; for it blooms after ¹¹ the rising of the Pleiad and only for a few days. It pushes up the flower at once with the leaf, or even seems to do so earlier. The root ¹² is large and fleshy, and the whole plant vigorous; it loves even to be tiodden on and grows fairer when the root is crushed into the ground by the

ENQUIRY INTO PLANTS, VI. vi. 10-VII. 2

foot!: wherefore it is fairest along the roads and in well-worn places ² It is propagated from the root.

These are the ways then in which the above plants are grown. All the above-mentioned flowers are grown from seed, as gilliflower carnation spike-lavender wall-flower martagon-lily; these plants themselves, as well as then roots, are woody. Drop-wort is also grown from seed; for that too is a plant grown for its flower. These and other plants like them may serve as examples of plants grown for their flowers.³

VII. All the others flower and bear seed, though they do not all appear to do so, since in some cases the fruit is not obvious. Indeed in some the flower too is inconspicuous, but, because 4 these grow slowly and with some difficulty, men propagate them rather by off-shoots, as was said at the beginning However some contend that they have no fruit: and there are men who have actually tried with the following plants 5; they have, they say, themselves often dried and jubbed out and sown the apparent fruit of thyme calamint bergamot-mint and green mint (for even that they have tried) and there was no germination from such sowing. However, the account given above is the tiuer, and the character of the wild forms testifies to this; for there is also a wild thyme (Attic thyme 6), which they bring from the mountains and plant at Sicyon, or from Hymettus and plant at Athens; and in other districts the mountains and hills 7 are quite covered with it, for instance in Thrace There is also a

wild bergamot-mint, and wild forms of the other plants mentioned, having a more pungent smell. Thyme is sometimes ¹ quite like cultivated thyme.² Now it is plain that these wild forms possess this

means of reproducing themselves.3

Southernwood actually grows more readily from seed than from a root or a piece torn off (though it grows even from seed with difficulty); however it can be propagated by layering in pots in summertime, like the 'gardens of Adonis'; it is indeed very sensitive to cold and generally delicate even where the sun shines brightly; but, when it is established and has grown, it becomes tall and strong and tree-like, like rue, except that the latter is much more woody drier and less succulent

⁷ Sweet marjoram grows in either way, from pieces torn off or from seed; it produces a quantity of seed, which is fragrant with a delicate scent; it can also be transplanted ⁸ Southernwood also produces much seed, which has some scent. This plant has straight roots which run deep; it has, as it were, its single stout root, from which the others spring; ⁹ while sweet marjoram thyme bergamot-mint and calamint have surface ¹⁰ roots which are much divided and matted; in all these plants the roots are woody, but especially in southernwood, because of its size and because it is so dry

ENQUIRY INTO PLANTS, VI. vii. 5-viii. 1

¹The growth of the shoots of thyme is peculiar. If it has a stake, or is planted against a wall, it can send them out to any length, so also if it is let grow downwards; indeed it is most vigorous when grown into a pit.² It is not possible to distinguish different forms of the cultivated kind, as has been said, but they say that of the wild kind (Attic thyme) there is more than one form, for that of the kind which grows on the mountains one form is like savory and very pungent, while the other is fragrant and more delicate.

³ The season for planting most of these is autumn, and then men hasten to plant them as early as possible; however some are planted also in spring. All of them love shade, water, and especially dung; however thyme is patient of drought and, in general, needs moisture less than the others. These plants especially delight in the dung of beasts of burden, and it is said that they should often be transplanted, for that it improves them, while bergamot-mint, as has been said, actually degenerates ⁵ if it is not transplanted.

Of the seasons at which coronary plants flower, and of the length of their life

VIII. ⁶ Of the flowers the ⁷ first to appear is the gilliflower; where the air is mild, it appears as soon as winter comes, but, where it is more severe, later, sometimes in spring. Along with the gilliflower, or a little later, appears the flower called the wild wall-

flower. These, of all the flowers that the garlandmakers use, far outrun the others. After these come pheasant's eye1 and polyanthus1 narcissus (and, among wild plants, the kind of anemone which is called the 'mountain anemone')2 and the 'head'3 of pursetassels, for this too some interweave in their garlands After these come dropwort violet, and of wild plants, gold-flower,4 the meadow kind of anemone corn-flag hyakinthos (squill), and pretty well all the mountain flowers that are used. The rose comes last of these, and is the first of the spring flowers to come to an end, as it is the first to appear, for its time of blooming is short. So too is that of the rest of the wild plants mentioned, except hyakınthos,5 the wild kind (squill), and also the cultivated (larkspur); this lasts on, and so does the gilliflower, and for a still longer time the wallflower. while the violet, as has been said, blooms throughout the year, if it receives tendance. So too dropwort? (for that too is one of the plants valued for their flowers, though it is herbaceous 8 in character) if one pinches off and removes the flower instead of letting it go to seed, and if, further,9 it has a sunny position. The flower is clustering and white, like that of the wild These then are, we may say, the plants of spring.

the Phrygian sweet marjoram¹; also the plant called 'regret,' ² of which there are two kinds, one with a flower like that of larkspur, the other not coloured but white, ⁸ which is used at funerals; and this one lasts longer. The iris also blooms in summer, and the plant called soap-wort, which has a beautiful flower but is scentless. In autumn bloom the other kind of naicissus, ⁴ the crocus, both the scentless mountain form and the cultivated one (saffroncrocus); for these bloom directly the first rains come. The fruit ⁵ of the cotoneaster and the flower of the smilax, both of them wild plants, are also used in garlands

Such are the seasons at which each appears; and, to speak generally, there is no interval of time nor flowerless period, but even winter produces flowers, for all that it seems to be unproductive by reason of the cold, since the autumn flowers continue into winter, and to a much greater extent if the season be mild. For all things, one may say, or at least most of them, extend beyond their proper season, and all the more if the place be sunny; so that there is a continuous succession. These then are the periods and seasons at which the various flowers are produced

⁷The life of the gilliflower is at most three years; as it ages it degenerates and produces paler flowers.⁸ A rose-bush lives five years, after which its prime ⁹ is past, unless it is pruned by burning ¹⁰; with this plant too the flowers become inferior as it ages. Position and a suitable climate contribute most to

the fragrance of roses gilliflowers 1 and other flowers. Thus in Egypt.2 while all other flowers3 and sweet herbs are scentless, the myrtles 4 are marvellously fragrant. In that country it is said that the roses gilliflowers and other flowers are as much as two months ahead of those in our country, and also that they 5 last a longer, or at least not a shorter, time than those of our country.

And, as has been said, the particular season according to its character, makes a great difference to the fragrance, not only by reason of rains and droughts, but also according as rain, wind, and in general, the changes of climate occur or do not occur at the fitting moment. Also it appears that in general roses gilliflowers and the rest bloom well on the mountains, but many of them have there an Concerning coronary plants and inferior scent. under-shrubs in general these examples and others like them suffice for our enquiry.

BOOK VII

OF HERBACEOUS PLANTS, OTHER THAN CORONARY PLANTS:
POT-HERBS AND SIMILAR WILD HERES

Of the times of sowing and of germination of pot-herbs

I. Next we have to tell of herbaceous plants: for this class remains of those which we distinguished at the outset, and it includes to some extent the classes of pot-herbs and of cereals. And first we must speak of the class of pot-herbs, beginning with the cultivated kinds, since it happens that these are better known than the wild kinds

¹There are three seed-times for all things grown in gardens, at which men sow the various herbs, distinguishing by the season. One is the 'winter' seed-time, another the 'summer,' and the third is that which falls between these, coming after the winter solstice. These terms however are given in regard not to the sowing, but to the growth and use of each kind; for the actual sowing takes place, one might almost say, at the opposite seasons. Thus, the 'winter' period begins after the summer² solstice in the month Metageitnion,³ in which they sow cabbage radish turnip, and what are called 'secondary crops,' that is to say, beet lettuce rocket monk's rhubarb mustard coriander dill cress, and

ENQUIRY INTO PLANTS, VII. 1. 2-3

this is also called the 'first' period of cultivation. The second period begins after the winter solstice in the month Gamelion, in which they scatter or plant the seed of leeks celery long onion orach. The third period, which is called the 'summer' period, begins in the month Munychion : in this are sown cucumber gourd blite basil purslane savory. Moreover they make several sowings of the same herb at each season, as of radish basil and the others. And at all the periods are sown the

'secondary crops.'

³ Not all herbs germinate within the same time, but some are quicker, others slower, namely those which germinate with difficulty. The speediest are basil blite rocket, and of those sown for winter 4 use, ladish; for these germinate in about three days. Lettuce takes four or five, cucumber and gourd about five or six, or, as some say, seven; however, cucumber is earlier and quicker than the others. Purslane takes a longer time, dill four days, cress and mustard five. Beet in summer takes six days, in winter ten, orach takes eight, and turnip ten. and long onion do not take the same time, but the former nineteen to twenty days, the latter ten to twelve Collander germinates with difficulty; indeed fresh seed will not come up at all unless it is moistened.⁶ Savory⁷ and marjoram take more than thirty days, but celery germinates with the greatest difficulty of all; for those who make the time comparatively short say forty days, and others fifty, and

leek long onion cucumber gourd; (some even soak the seed of cucumber first in milk or water, to make it germinate quicker) Some come up quicker from old seed, as celery beet cress savory coriander marjoram (unless indeed they are raised ¹ from fresh seed in the manner ² which we have mentioned). There is, they say, a singular feature about beet ³; the seed does not all germinate at once, but some of it not for some time, some even in the next or in the third year; wherefore it is said that little comes up from much seed.

Any of the seeds, if they are mpe when they fall, last till their own proper season and do not sprout till then. And in this they are consistent; for we note that the same thing happens with the seed of wild plants, unless it is destroyed. However all mature their fruits in the summer, though sooner and quicker, generally speaking, when they are sown earlier. The season also 4 makes a difference; things sown in the hot season push up their shoots and go to seed sooner, as radish and turnip. Some however bear their fruit not in the same year but in the next, as celery 5 leek long onion, which plants also last a longer time, and are not annual; for most herbs wither with the ripening of their seed.

Generally speaking, all those that push up shoots and mature their fruit leach their perfection of form in having side-shoots bianching from the main stem—except those which have but a single stem, as leek long onion onion garlic

All these herbs are lovers of water and of dung,

and especially the weaker ones, which require more attention or in some cases more feeding.

Of the propagation of pot-herbs, and of differences in their roots.

II. All these herbs are propagated from seed, and some also by a piece torn off, a shoot, or a piece of root. Cabbage is propagated by a piece torn off,2 since it is essential 3 in this case to take a piece which has root attached to it. From cuttings 4 are grown rue marjoram basil; for slips of this too men plant when it has grown to the height of a span or more, cutting off half the plant 5 By root6 are planted garlic onion purse-tassels cuckoo-pint and in general such bulbous plants. Such propagation is also possible in cases where the roots persist for more than a year, though the shoots last but for a year. And it is plain that all these herbs can be grown from seed; for even rue can (which some deny), though the process is slow, and so cuttings are also taken.

Of those which are propagated by a piece of root the root is long-lived, though the plant itself may be annual; wherefore the roots of such plants make offsets and so increase; and this is true not only of plants cultivated in the garden, but also of wild plants, as we have said, for instance of purse-tassels long onion 7 squill and so forth. Some plants even which are not bulbous 8 but longer-lived make offsets, as celery and beet; for these send out roots from which grow leaves and stems. Long onion and

leek 1 also make offsets, sending out a 'head' below, like the bulb of purse-tassels, from which the leaves spring; but this only takes place when the stem has withered and the seed has been removed. But. as 2 the 'heads' 8 of such plants are not useful, they do not collect them 4 for storing dry; wherefore also they do not plant these.5 It may be that somehow these are akin and closely allied to onion, wherefore what has been said is not surprising. However in all those plants, both wild and cultivated alike.6 which have an annual stem,7 but yet live longer than a year, there is an outgrowth of the roots, just as there is in under-shrubs and shrubby plants: while in onions garlic and purse-tassels even a number,8 as it were, of such roots is formed. In fact,9 they are reproduced in three ways, as has been said; from seed in all cases and from the stem 10 and root in those specified

11 Almost all shoot again if the stem is broken (except those which are stemless), but most obviously basil lettuce cabbage, which are, as it were, broken for a practical leason. Indeed they say that the stems of lettuce which thus grow again are sweeter,12 for that the original stem has a taste like fig-juice and is bitter, as being not properly ripened. Some however say that the later stems have the taste of fig-juice more than the original one, but that, so long as they are tender, they appear sweeter. Be that as

ENQUIRY INTO PLANTS, VII. 11. 4-6

it may, it is admitted that in the case of cabbage the stem is sweeter if it should have grown 1 again after being broken, provided that the leaves are stripped off before the plant runs to stalk.

In most cases the roots persist, but they do not in all cases produce fresh growth. Thus radish and turnip persist till summer, if earth is thrown on them, and they increase in size; and some gardeners do this deliberately, but they do not make fresh growth nor send out leaves, even if one 2 removes the earth heaped over them. And this may also be observed in other plants. However, most pot-herbs have the single stout root which runs deep; for even in those which produce these side-roots of equal stoutness, as celery and beet, the side-growth comes, as it were, from the middle root and it is not separate to start with; but to this single 100t are

attached the small out-growths, both in radish and in turnip These instances are familiar to all because

of the use 4 which is made of these plants.

The beet has a single long stout straight root like that of the radish, and has stout out-growths, sometimes two, sometimes three, sometimes only one, and the small ones are attached to these. The root is fleshy and sweet and pleasant to the taste, wherefore some even eat it raw. The 'bark' is not thick and cannot be detached, like that of the radish, but rather resembles that of alexanders. In like manner the root of orach is single and runs deep, and other roots are attached to it.

ENQUIRY INTO PLANTS, VII. 11. 7-8

Monk's rhubarb 1 however has a single root in a truer sense than any of the others, for it has no stout out-growths of root, but only the 2 slender ones; its root also runs deeper than that of the others, being more than a foot and a half long. The wild sort 3 however has a shorter root, and has several stems and branches, and its shape, as a whole, when fully grown resembles that of beet. Cultivated monk's rhubarb moreover is longer lived than the wild form, 4 and, in general, we may say, than any other pot-herb, for, they say, it may live any time. It has a fleshy root, 5 full of moisture, wherefore, if pulled-up, it will live some time.

Basil has the single stout root, the one which runs deep, and the others at the sides are slender and

fairly long

Some herbs, as blite, have not the single straight root, but a number of roots which start directly from the top and are of a good stoutness⁶ and longer than those of orach

The roots of basil are woodier than those of any of the other herbs, as also is its stem, for those of blite orach and the like are less woody. In general we may say that the roots of any of these herbs are either woody or fleshy. Examples of fleshy roots are beet celery alexanders monk's rhubarb radish tuning, and especially all heavy-headed had kinds, for the roots of these do not wither up altogether even when they are dried. Examples of those with woody roots

are basil blite orach rocket dill 1 comander, and in general, those with fibrous stems; for in dill and coriander, which have a single root, the root is woody and not long, and the slender side-roots2 from it are not numerous; but both plants have several stems and branches; wherefore in neither of these plants does the part above ground correspond to the

part which is below.

The following 3 have short roots: lettuce and purslane, in which both the straight main root and the side ones are short 4 Lettuce may be said to have no such side-roots, but only the slender ones, and may be called in the strictest sense a plant of a single root. In general all summer herbs have short roots we may include cucumber gourd and bottlegourd, both because of the season to which they belong and perhaps still more because of their character, which corresponds to the season ever the transplanted lettuce has a shorter root than one that is raised from seed, since it is more apt to send out side-growths; also the wild kind has a shorter 5 100t than the cultivated, and the part above ground has more stems 6

Of the flowers and fruits of pot-herbs

III. 7All, except one, of these herbs produce all their bloom at once, but basil has a succession of flowers. the lower part of the plant flowering first, and then, when that bloom is over, the upper part. Wherefore its season of bloom is a long one, like that of the

bean, and among herbaceous plants ¹ that of the plant called *heliotropion*, and also other wild plants. Cucumber also has a long period ² of bloom, for this plant has a second growth. The flowers are in some cases whitish, in others quince-yellow, ³ in others somewhat reddish ⁴; but the flower is never of a

bright colour.

⁵The seeds too differ in shape, most are round, but some are oblong; some again are broad and leaf-like, as those of orach, for the seed of this is like that of silphium; others again are nariow or marked in lines, as those of cummin. They also vary in colour, some being black, some the colour of wood, some paler. The seeds of all are either in pods or naked, or have an integument or have a pappus. Radish mustard and turnip have their seeds in pods, conander fennel dill and cummin have naked seeds; those of blite beet orach and basil are enclosed in an integument; those of lettuce have a pappus on them

All have numerous fruits and numerous shoots, but cummin has the most s finits of all. And there is another peculiarity told of this plant: they say that one must curse and abuse it, while sowing, if

the crop is to be fair and abundant

Nearly all of these, except cummin, are hard to dry for keeping,—unlike corn 10; for this, when once

it is ripened, quickly dries and is shed, and the herbs whose seed have an integument are harder still to dry, especially basil. All however, when dried, produce more fruit: wherefore 1 it is the custom to gather the seed early and dry it. All of them are prolific and produce many seeds, but basil produces most of all

Examples of those which produce their fruit at the top of the stem are basil leek onion: of those which produce it rather at the sides, radish turnip and the like; of those which produce it in both ways, blite and orach; both of these produce it at the side as well as at the top; in fact blite 2 has its seed in clusters, closely attached to each branch. Some push up their shoots 8 fairly soon from old seed, but seed from plants in their prime is the most rapid; for these plants too have a time when they are at their best The beauty of the plant also corresponds 4 in proportion, provided that equal care in 5 other respects is shewn in cultivation

⁶ It likewise appears that, if a quantity of seed is sown in the same place, the resulting crop comes up and germinates better; thus they tie up seed of leek and celery in a piece of cloth, before sowing, and then there is a large 8 crop

The position also contributes to growth, at least, when celery is transplanted, they suggest that one should hammer 9 in a peg of whatever size one wishes to make the celery, and also that one should sow the seed in a piece of cloth 10 after hammering in a peg and filling the hole with dung and soil

Some things again come to resemble in their shape even the position 1 in which they grow: thus the bottle-gourd becomes like in shape to the vessel 2 in which it has been placed.

Moreover differences in taste are acquired in some cases when the seed has been treated specially beforehand; for instance, the seed of the cucumber produces a fruit with different taste if it is soaked 3 in milk before sowing. But such matters belong perhaps more properly to the subject of cultivation.

Of the various forms of some pot-herbs

IV. Of some herbs there are several kinds, but of others only one, as basil monk's rhubarb blite cress rocket orach comander dill rue; of each of these they say that there is 4 but one kind. But of others there is more than one, as radish cabbage beet cucumber gourd cummin garlic lettuce. Differences are marked in the leaves, the root, the colour, the taste, and so forth

Thus of radish they recognise these various kinds⁵—the Corinthian, that of Cleonae, the Leiothasian, amorea, the Boeotian The Corinthian is said to be the strongest in growth, and it has an exposed root, for it pushes upwards, and not downwards like the others. The Leiothasian is called by some the

¹ Diosc 2 112 mentions a kind called by the Romans αρμοράκιον. Plin 19. 82 has armoracia and says that this was called armon in Pontus; Sch. suggests that the latter name may have given rise to both armoracia and ἀμωρέα.

Plin. 18. 129, cf. 19 75, Athen 9 7
 πηγνύναι. The verb is used of planting seeds singly; cf. 6 6 9; 7 1, 2, 7 5, 3

ENQUIRY INTO PLANTS, VII. IV. 2-3

Thracian radish, and it stands the winter best. The Boeotian is said to be the sweetest and to be round in shape, not of a long shape like that of Cleonae. Those kinds whose leaves are smooth are sweeter and pleasanter to the taste, those whose leaves are rough have a somewhat sharp taste. Besides the above-mentioned kinds ¹ there is yet another, whose leaves resemble those of rocket. These then are the different kinds of radish

Of the turnip 2 all do not agree that there are several kinds, but some say that the only difference is between the 'male' and the 'female,' and that both forms come from the same seed. In order to produce 'female' plants it is said that the seed should be sown 3 thinly, for that, if it is sown thick, the result is all 'male' plants; and that the same result follows if the seed is sown in poor soil. Wherefore, when they are shifting plants for seeding,4 they plant the seedlings 5 wide apart 6, Good and inferior seed can be easily distinguished by their appearance; the seed of a good plant is fine, that of a poor one coarse. Both this plant and radish like exposure to winter; for it is supposed that this makes them sweeter and that they are thus made to grow roots rather than leaves a south wind and warm weather they run up quickly. It needs explanation that both plants should thus adapt 7 themselves in special ways.

7 της δμοιώσεως probably corrupt. no correction suggests

itself.

⁶ καὶ πλατείας corrupt διεστηκυίας (W.) gives the required sense; but there may be a loss of some words, πλατείας indicating that the object is to produce broader plants of. C.P. 5 6.9 and Sch 's note

ENQUIRY INTO PLANTS, VII. iv. 4-6

¹ Of cabbage three kinds are distinguished, the curly-leaved, the smooth-leaved, and thirdly, the wild form.² The wild form ³ has a small round leaf, it has many branches and many leaves, and further a sharp medicinal taste; wherefore physicians use it for the stomach. Between the other two kinds ⁴ there seem also to be differences, inasmuch as one of them bears no seed or only inferior seed. In general the curly-leaved kind has a better flavour than the smooth and it has larger leaves

⁵So too with beet, the white kind has a better flavour than the black and produces fewer seeds;

some call it 'Sicilian' beet.

So too with lettuce, the white kind is sweeter and tenderer. Of this plant there are three other kinds, the flat-stalked, the round-stalked, and the Laconian; the last-named has a leaf like the golden thistle, but is elect and strong-growing and has no side-shoots from the main stem. Of the flat kinds some have such flat stalks that some, they say, use them to make a garden trellis. The third kind, which has much milky juice and small leaves and a whiter stem, is like a wild plant.

10 In celery the differences between the various kinds lie in the leaves and stem, one kind is close and curly and has rough leaves, the other is more open in growth and flatter, but has a larger stalk. Again there are kinds with stems white, red or particoloured; and in general all such forms resemble

ENQUIRY INTO PLANTS, VII. IV. 6-8

As to cucumber and gourd, it is said that there are various forms of the former, but of the latter, just as in radish and turnip, the differences are only between better and inferior individuals ¹ Of the cucumber there are three forms, the Lacoman the cudgel-shaped and the Boeotian. Of these the Lacoman is better with moisture, the others without it.

² There are also various kinds of onion and of garlic; those of the onion are the more numerous. for instance, those called after their localities Sardian.3 Chidian, Samothracian; and again the 'annual' the 'divided'4 (shallot) and that of Ascalon.⁵ Of these the annual kind is small but very sweet, while the divided and the Ascalonian differ plainly as to their character as well as in respect of their cultivation For the 'divided' 6 kind they leave untended in winter with its foliage,7 but in spring they strip off8 the outside leaves and tend the plant in other ways; when the leaves are stripped off, others grow, and at the same time division takes place under ground, which is the reason of the name 'divided.' Some indeed say that all kinds should be thus treated, in order that the force of the plant may be directed downwards and it may not go to seed. Ascalonian kind has a somewhat peculiar character, it is the only kind which does not 10 divide and which does not, as it were, reproduce itself from the root; moreover in the plant 11 itself there is no power of increasing and multiplying; wherefore

ENQUIRY INTO PLANTS, VII. IV. 8-10

many do not plant these, but raise them from seed; and the sowing is made late, towards the spring; and then, when the seed has germinated, they transplant. And the plant arrives at maturity so fast that it is taken up with the others or even earlier, whereas, if it is left a longer time in the ground, it rots. If planted on the other hand, it sends up a stem and merely produces seed, and then shrivels up and withers. Such then is the character of these

Some also shew differences in colour; thus at Issus 5 are found plants which in other respects resemble the others,6 but which are extremely white in colour; and they bear, it is said, onions like those of Sardis. Most distinct however is the character of the Cretan kind, which resembles to some extent that of Ascalon, if indeed it be not the same. For in Crete there is a kind which when sown produces a root, but when planted produces a stem and seed but has no 'head'; 7 and it is sweet in flavour. This kind in fact has just the contrary character to the others; for they all grow better and faster when they are planted. All are planted 8 after the rising of Arcturus while the earth is still warm, so that the rains may come upon them after planting. They are planted 9 cither entire or else in sections made by cutting at the 'head.' The growth which results is not uniform; from the lower part comes an onion,

from the upper only foliage; while, if the plant is divided vertically, no growth at all takes place The kind called horn-onion has no 'head,' 1 but has as it were a long neck, at the top of which comes the new growth, it is often cut, like the leek; wherefore it is raised from seed and not planted 2 then, one may say, are the forms of the onion.

³ Garlic is planted a little before or after the solstice. when it divides into cloves 4 There are different kinds distinguished as late or early, for there is one kind which matures in 5 sixty days. There are also differences as to size. There is one kind which excels in size, especially that variety which is called Cyprian, which is not cooked but used for salads. and, when it is pounded up, it increases wondrously in bulk, making a foaming dressing. There is a further difference, in that some kinds cannot be divided into cloves. The sweetness of taste and smell and the vigour depend on the position 6 and on cultivation, as with other herbs Garlie reaches maturity from seed. but slowly, for in the first year it acquires a 'head' which is only as large as that of the leek, but in the next year it divides into cloves, and in the third is fully grown, and is not inferior, indeed some say it is superior, to the garlic which has been planted.7 The growth of the root in garlic and onion is not the same, in garlic, when the clove has swollen, the whole of it becomes convex⁸; then it increases and divides again into the cloves, and becomes several plants instead of one by the maturing of the 'head,'

while the onion puts out another and another growth straight from the root, as do purse-tassels ¹ and squill and all such plants For both onions and garlic multiply if they are not removed but left alone. They say also that garlic produces garlic heads on the stalk, ² and that the onion in like manner produces onions ³ Let this suffice for an account of their ways of growth.

Of the cultivation of pot-herbs, manue and water.

V 4 All the pot-herbs are lovers of water and of dung, except rue, which does not at all like dung: this is true of the winter no less than of the summer herbs, and of the tender no less than of the strong ones. The dung which is most commended is that which is mixed with litter, while that of beasts of burden is held to be bad, because it is most apt to lose its moisture. Dung which is mixed with the seed is most in request, but some cast the manure on while they are sowing, and they also use fresh human dung as a liquid manure.5 The winter crops like moisture more than the summer ones, and the weak more than the strong, as well as those which specially need feeding Onion and long onion also love moisture, though some say that they do not require it. if at the outset it has been applied twice or thrice 6 Fresh cold water is the best, and the worst is that which is brackish and thick:7 wherefore the water from irrigation ditches is not good, for it brings with it seeds of weeds. Rain

ENQUIRY INTO PLANTS, VII. v. 2-4

water is good, for it also appears to destroy the pests which devour the young plants. Some however say that rain-water is not good for melons nor for onions. Most heibs are watered in early morning or at evening, so that they may not be dried up 2; but basil is watered even at noon, for it is said that it glows more quickly if it is watered at first with warm water. In general water seems to be extremely beneficial, especially if it is mixed with dung 3; for, they say, pot-herbs often are hungry, and experienced gardeners can recognise when this is so

⁴ All herbs grow finer and larger if transplanted; for even the size of leeks and radishes depends on transplantation. Transplanting is done especially in view of collecting seed ⁵: and, while most herbs bear it well, as long onion leek cabbage cucumber celery turnip lettuce, others bear it less well ⁶ All however make better growth and are larger if the

seed is planted 7 rather than scattered.

Of the pests which infest pot-herbs

⁸ As for pests,—radish is attacked by spiders, ⁹ cabbage by caterpillars and grubs, while in lettuce, leek, and many other herbs occur 'leek-cutters.' ¹⁰ These are destroyed by collecting green fodder, ¹¹ or when they have been caught somewhere in a mass

of dung, the pest being fond of dung emerges, and, having entered the heap, remains dormant there is wherefore it is then easy to catch, which otherwise it is not. To protect among the crop; to prevent the spiders from being engendered they say that there is no specific. Basil turns pale about the rising of the dog-star, and coriander becomes mildewed. In these instances we may observe the accidents which occur to pot-herbs.

Of the time for which seed of pot-herbs can be kept.

SOf seeds some have more vitality than others as to keeping; among the more vigorous ones are coriander beet leek cress mustard rocket savory, and in general those of pungent taste; among the less vigorous are long onion—which will not keep—orach basil gourd cucumber; and in general the summer herbs keep less well than the winter ones. No seed will keep more than four years so as still to be of use for sowing; though it is better in the second year, 10 in some cases it does not deteriorate in three years, 11 but after that time 12 deterioration begins

However for cooking purposes seed will keep a

longer time, except that such seed must necessarily become less vigorous by reason of 'evaporation' and destruction by worms The chief cause of loss is vermin; for vermin occur in all the seeds, even those which are pungent, though least in the gourd tribe; such seeds however, as they lose their moisture, become bitter in taste and inferior for use. Let this suffice for an account of the seeds and in general of herbs cultivated in gardens

Of uncultivated herbs the unld forms of pot-herbs.

VI. 4 We must now endeavour to speak in the same way of the wild kinds and of those which are called uncultivated herbs Some of these have the same names as the cultivated 5 kinds; for all these kinds exist also in a wild form, and most of them resemble the cultivated kinds in appearance, except that in the wild forms the leaves and also the stalks are smaller and rougher, and in particular these forms are more pungent and stronger in taste, for instance, savory 6 marjoram cabbage and rue; the wild monk's rhubarb (dock) indeed, though it has a pleasanter taste than the cultivated, yet has 7 a sharper flavour: and this is the chief difference Moreover all the wild kinds are less juicy than the cultivated, and perhaps this is the very reason why most s of them are more pungent and stronger.

A peculiarity of 'wild cabbage' as compared with the others is that its stems are rounder and smoother

everywhere. There is also a sort 1 of gum which exudes from the plant, like myrrh, and some say that

ıt is 2 myrrh.

'Mountain-celery' (parsley) exhibits even greater differences; its leaf is like that of hemlock, the root is slender, and the fruit like that of dill, but smaller; it is given in dry wine for diseases of women.

In some cases however the wild kinds are not in the least like the cultivated ⁵ in taste and properties; thus the wild and the cultivated cucumber ⁶ are quite different, and their resemblance ⁷ is due only to their general look, as, among coronary plants, there is resemblance between the wild and the cultivated kinds of gilliflower; for the leaves are alike. We have then described the differences which these plants present.

Of other uncultivated herbs, which may be classed with pot-herbs.

VII Next we must speak of the differences found in the herbs called 'uncultivated,' and in general in any herbaceous plants ⁸ which are not edible. For we give the name of 'pot-herbs' to those which are cultivated for our own use, but in a wider sense the term includes these also; wherefore we must speak of them too ⁹ Under the name 'pot-herbs' are included also ¹⁰ such plants as chicory dandelion ¹¹ khondrylla ¹² cat's ear groundsel, and in general all

those that are called 1 'chicory-like' because of the resemblance in the leaves; for to a certain extent the leaves of all these are like those of chicory; and we may add kaukalis chervil 2 green mint. Some include under the name countless others, as wild chervil and all plants that resemble it, and goat's beard, 3 which some call kome ('hair'), which has a long sweet root and leaves like those of the crocus, but longer, and a short stem, on which is set the sheath 4; this is laige, and on the top is the large mass of grey pappus, 5 from which it gets its name of 'goat's beard'

In like manner all those may be included which have a similar ⁶ appearance, but juices suitable for food whether raw or cooked; for some need the action of fire, as malakhe (cheese-flower) beet monk's rhubarb nettle and bachelor's buttons; while garden nightshade ⁷ is also eaten raw, and some in former times ⁸ considered it worth glowing in gardens. There are also many more, including the plant which has become proverbial ⁹ for its bitterness, blue pimpernel, which has a leaf like basil. All these are either annual or have annual stems; for some of them wither away altogether in one season, while of others the roots persist for a longer time, and to this class belong the majority.

Some of these plants grow from roots and also from seed—unless in some cases they come up

ENQUIRY INTO PLANTS, VII. vii. 3-viii. 1

spontaneously. The growth alike of these 1 and of others takes place in some cases with the first rains after the equinox, for instance, dandelion 2 ribgrass and the plant which some call buprestis; in other cases after the rising of the Pleiad, for instance, chicory and most of the plants of that class. Some produce their flower immediately at the time of making growth, as lesser celandine, some not long after, as anemone, while some as soon as spring comes send up both their stems and flower, as chicory and the plants which resemble it, and those spinous plants which come under the head of pot-herbs.

There is much difference in the flowers, of which we have spoken already; for such difference is a thing common to all; and some are altogether flowerless, as stonecrop.³ Those which produce their flower with the stem ⁴ quickly shed the flower, except that dandelion,⁵ when the first flower is past its prime, produces another and yet another, and continues to do so right through the winter and spring up to the summer. Groundsel ⁶ also blooms for a long time; the others however do not do this; for instance the crocus does not, neither the scented (saffron crocus) not the white nor the spinous kind,⁷—which last are scentless.

Of the differences in stem and leaf found in all herbaceous plants.

VIII. A distinction which is found in all herbaceous plants alike is the following —some have straight

καυλα, τὰ δὲ ἐπιγειόκαυλα, καθάπερ μαλάχη σκάνδιξ σίκυος ἄγριος· τὸ δὲ ἡλιοτρόπιον ἔτι μᾶλλον ὡς εἰπεῖν τοιοῦτον, ὅσπερ καὶ ἐν τοῖς ἀκανθώδεσιν οῦσιν τρίβολος καὶ ἡ κάππαρις καὶ ἄλλα πλείω· καὶ γὰρ ἐκείνων ἡ διαφορὰ πλείων. ἔνια δὲ περιαλλόκαυλα, μὴ ἔχοντα δὲ ποῦ προσπέσωσιν ἐπιγειόκαυλα, καθάπερ ἐπετίνη καὶ ἀπαρίνη καὶ ἀπλῶς ὧν ὁ καυλὸς λεπτὸς καὶ μαλακὸς καὶ μακρός, δι' ὁ καὶ φύονται ταῦτα ὡς ἐπὶ τὸ πᾶν ἐν ἄλλοις· κοινὴ δὴ καὶ αὕτη ἡ διαφορὰ πάντων οὐ μόνον τῶν ποιωδῶν καὶ φρυγανικῶν ἀλλὰ καὶ τῶν θαμνωδῶν· καὶ γὰρ ἡ ἔλιξ καὶ ἔτι μᾶλλον ἡ σμῖλαξ περιαλλόκαυλον.

Έτι δὲ καὶ τῶν ποιωδῶν τὰ μὲν πολύκαυλα τὰ δὲ μονόκαυλα· καὶ τῶν μονοκαύλων τὰ μὲν ἀπαράβλαστα κατὰ τὸν καυλὸν τὰ δὲ παραβλαστικά, καθάπερ καὶ ἐν τοῖς ἡμέροις ἡ τε ῥαφανὶς καὶ ἄλλὶ ἄττα. πολύκαυλα δὲ ὡς ἀπλῶς εἰπεῖν τὰ ἐπιγειόκαυλα, μονόκαυλα δὲ καὶ ὀλιγόκαυλα τὰ ὀρθόκαυλα. τούτων δὲ ἀπαράβλαστα τὰ λειόκαυλα κρόμυον πράσον σκόροδον, ὥσπερ καὶ ἐν τοῖς ἡμέροις καὶ τὰ μὲν εὐθύκαυλα τὰ δὲ σκολιόκαυλα καὶ τούτων [τοῖς ἡμέροις] ὑπάρχει.

διαφορὰ δέ τις καὶ τοιάδε τῶν ποιωδῶν ἐστι· τὰ μὲν γὰρ ἐπιγειόφυλλα τὰ δ' ἐπικαυλόφυλλα τυγγάνει τὰ δ' ἀμφοτέρως. ἐπιγειόφυλλα μὲν

ENQUIRY INTO PLANTS, VII. viii. 1-3

and fibrous stems, some prostrate stems, as malakhe (cheese-flower) wild chervil 'wild encumber' (squirting cucumber); while heliotropion has this character to an even greater extent, and so, among spinous plants, have caltrop caper and several others; for in these too the above-mentioned distinction is even more marked. Some again have clasping stems, but if they have nothing on which to throw themselves, then stems become prostrate, as epetine bedstraw and in general those which have a slender soft long stem; wherefore these in general grow in the midst of tother plants. This point of difference too is common not only to all herbaceous plants and under-shrubs, but also to shrubby ones; for helix (ivy) has a clasping stem, and, still more, smilax

Again of herbaceous plants too some have several stems, some only one; and of the latter some have no side-shoots along the stem, while others have side-shoots, for instance, among cultivated plants radish and some others. Those with prostrate stems have generally more than one, while those with erect stems have but one or a few. Of these those with smooth stems have no side-shoots, as onion leek garlic—the wild, as well as the cultivated forms; and of these ⁵ again some have straight, some crooked stems.

There is also the following point of difference in herbaceous plants:—some have their leaves on the ground, some on the stem, some have both characters. The following have ground leaves—crowsfoot ⁶ the

anthemon whose flowers have no petals 1 (wild camomile) alkanet grass anemone hawk's beard plantain dandelion 2; the following have leaves on the stemox-tongue the anthemon which has petalled flowers 3 trefoil gilliflower, while chicory has both kinds of leaves; for this plant produces,4 as well as leaves, a certain number of flowers on the stems at the points where the side-shoots are attached. Similar too are some of the plants with spinous leaves, but not those that are altogether spinous, as sow-thistle

Of other differences seen in herbaceous plants in general, as compared with one another and with trees

IX. Again some are barren, while others bear fruit, and, speaking generally, of herbaceous plants some get as far as producing leaves only, others have a stem and flower, but no fruit; some again have fruit as the completion of their development, while some bear fruit even though they have no flower, as is the case with some trees

⁵The leaves of herbaceous plants again differ in hardly fewer, nay, even in more, ways than those of trees, and further, they present differences as compared with these, the chief being perhaps that some are attached by a leaf-stalk, some are attached directly, some attached with cauline appendages.6 And in some herbaceous plants the stalk 7 is the first part to grow, but in most the leaves, which almost at the outset grow to their largest and are best for eating; whereas the leaves of trees always push out first a sort of stalk

ENQUIRY INTO PLANTS, VII. 1X. 2-4

There is also much difference as to the flowers between herbaceous plants and trees; for in trees¹ most of the flowers are white, while some are slightly reddish, others are greenish or greenish-yellow, but none of them² have distinct gay colours; while in herbaceous plants the flowers shew many and various colours, both simple and in combination, and further, some of them are scented, others not Again³ trees produce all their bloom at once, while some herbaceous plants have a succession of flowers, as we said⁴ of basil; wherefore it is in flower for a long period, as are many other herbs, such as heliotropion and chicory

There are also many differences in the roots, and, in a way, the differences in these are more obvious; some are woody, some fleshy and fibrous, just as in the cultivated kinds, as are those of corn and most kinds of grass. Again the roots themselves exhibit in each case very many differences in colour smell taste and size; some are white, some black, some red, as those of alkanet and madder; some are yellowish, or the colour of wood. Again there are roots which are sweet, bitter, pungent, fragrant, evil-smelling; and some are medicinal, as has been said elsewhere.

There are also differences between those with fleshy roots; the roots of some are round, of some oblong and acorn-shaped, as those of asphodel and crocus; 7 some consist of several layers, as those of purse-tassels squill and others which belong to that class, onion long onion and others like

these. Some are smooth loose and soft throughout, and, as it were, without 'bark,' as those of cuckoo-pint, while some have a 'bark' attached to the fleshy part, as those of cyclamen and turnip. And not all those that are fragrant or sweet or pleasant to the taste are also 1 edible, any more than all those that are bitter are uneatable; any (whether sweet or bitter) that are harmless to the body after being eaten are edible; for some that are sweet are deadly and dangerous to health, while some are beneficial even if they are bitter or have an evil smell. The same may be said of the leaves and stalks, as in the case of wormwood and centaury. There are also differences in the time of growth and of flowering, the season being variously the beginning or middle of winter, or again spring, summer, or autumn. So too is there in like manner a difference in the fruits, which 2 in some of these plants are edible and juicy, as well as 3 the leaves seeds and roots. And in these cases there are further differences in the taste (of those which are edible and juicy), which may be sharp, pungent, sweet, dry, or exhibit other similar differences, either altogether These are examples of the differor in degree. ences which we find.

its proper season and is not 1 affected even by rain. For some are plants which belong properly to summer as to their growth and their flowering, as golden thistle and squirting cucumber, as was said of shrubby plants and of konyza caper and the lest. for of these too none blooms or grows before its proper season. Wherefore in this respect too these plants would seem to differ from trees. For trees make their growth all at once or nearly so, or at all events we may say that they do so all at one season; but the plants of which we are now speaking have their times of growing and still more of flowering at many or rather at all seasons, so that, if one will consider it, both the growing and the flowering are almost continuous throughout the year; for one continually succeeds to another, so that all seasons are covered; thus after the dandelion 8 will come the crocus 4 anemone groundsel and the other plants of winter, and after these those of spring summer 5 and autumn. Some again, as was said, because they do not produce all their bloom at once,6 cover a longer season; for there are some that thus bloom, for instance dandelion 7 bugloss 8 chicory plantain, and others; but because of this continuity and overlapping it does not seem easy in some cases to define which first make growth and which are late in growing,unless 9 one were to lay down that the 'year'

² αὐτοῦ τούτου ⁹ the plant itself. αὐτοῦ τοῦ ἔτους conj. Sch. ³ ι e according as the seed ripened last year or this year. In this rather obscure section I follow W.'s explanations.

ENQUIRY INTO PLANTS, VII. x. 3-XI. I

begins when a certain season begins. Further in these plants it is not easy to define 1 in each case the time of first growth and the season when, the fruits being matured, it makes a fresh start in reproduction. This seems chiefly to occur after the autumnal equinox; for by that time most of the seeds are matured, like most of the fruits of trees: moreover a change then takes place in the seed 2 itself as well as in the season. But in the case of any seeds which are still immature and unripe and so are overtaken by winter, the period of first growth, the flowering of the new plant, and the period of maturity are proportionally later. Wherefore it comes to pass that some bloom at the solstice, some at the rising of the dog-star, and some after the rising of Arcturus and the autumnal equinox.3

But these matters seem to require a wider investigation in order to determine when the process begins. However it is clear from what has been said that these plants present at least as many differences as trees. ⁴For some again of this class are evergreen, as hulwort heliotropion and maidenhair

Of the classes into which herbaceous plants may be divided, as those having a spike and chicory-like plants

XI. Having then made these explanations we must now give a separate account of each plant, discussing the differences (in those plants in which they occur) and saying how they arise 5 except those peculiarities which belong to the

² σκανδικώδη ι e umbellate One would expect κιχοριώδη. to correspond with § 3; but the three classes mentioned seem to be merely 'samples' of classification. of the three only one (τὰ σταχυώδη) is described below, and other classes are added

³ μονοφυή I conj ι e those which have a scape: cf. 2. 6. 9; C P. 1. 1. 3 μυόφαα U, μυοφῶα MAld , om. G.

ENQUIRY INTO PLANTS, VII. xi. 1-3

character of individual kinds. I mean for instance the plants which have a spike, those which may be classed with wild chervil, and those which have a single stem, . . . or any other such class in which one can find some such general characteristics obvious to the senses either in leaves flowers roots or fruits; (for the classification is to be made

by the visible parts, as well as by the roots).4

⁵ An example of the plants which have a spike is the plant which some call 'dog's eye 6' (11b-grass), which comprises several forms; we have also 'foxbrush,' stelephuros (plantam), which some call 'lamb's tongue' and some 'quail-plant'; and somewhat similar to this is thryallis These are simple plants and uniform in character, having a spike which is not pointed nor bearded; while in 'fox-brush' it is soft and somewhat downy, in that it actually resembles the brush of a fox, whence also it has obtained its name. Similar to this is stelephuros (plantain), except that it does not, like that plant, flower here and there, but all up the spike like wheat. The bloom of both is downy like that of corn, and the plants in their general appearance resemble wheat, but have broader leaves Of the other plants which have a spike a similar account may be given

⁷The chicory-like plants all have annual leaves and have 100t-leaves, and they begin to grow after the Pleiad, except dandelion⁸; but in their stems

and roots they exhibit great differences; for in some these are simpler and fewer, but the stem of chicory is large and has many side-shoots; also it is tough and hard to break, wherefore it is used for withes it makes side-growths from the root, and also has long roots, wherefore it is hard to kill; for, when the top is taken off to use as a vegetable, what remains starts growing again. Moreover different parts of it flower at different times, and the flowering goes on till autumn, since the stem appears to be hard Also it bears a pod, which contains the seed, at the top of the stem.

Cat's ear 5 is smoother and has a more cultivated appearance, and is also sweeter and not like 6 khondrylla 7; for the latter is altogether uneatable and 8 unfit for food, and its 100t contains a quantity of

pungent juice.

Dandelion o is also unfit for food and bitter: it flowers early and quickly waxes old and the flower turns to pappus, but then another flower forms, and yet another, and this goes on right through the winter and spring up to the summer, and the flower is vellow.

10 The like may be said of pikris: for this plant too blooms in spring, and like dandelion it flowers throughout the winter, and it flowers also to some extent in summer; in taste it is bitter, whence its name. These are the special points of difference

about these plants; now we must endeavour, as was said,¹ to set forth the special points of the other classes in like manner.

Of herbs which have fleshy or bulbous roots.

XII. ² There is a large class of these which have fleshy or bulbous roots: these exhibit differences both as compared with other plants and with one another both in roots leaves stems and their other prominent features ³ Of the roots, as has been said ⁴ already, some are in layers, some fleshy, some have a 'bark,' some not; and again some are round, some oblong, some edible and some not fit for food. Among edible roots are not only purse-tassels and others which resemble them, but also the roots of asphodel and squill, though not of all kinds of the latter, but only of the kind called 'Epimenides' squill (French sparrow-grass) which gets its name from its use ⁵; this kind has narrower leaves and is smoother than the others

⁶ The root of cuckoo-pint is also edible, and so are the leaves, if they are first boiled down in vinegar; they are sweet, and are good for fractures. To increase the root, having first stripped ⁷ off the leaves (and the leaf is very large), they dig ⁸ it up and invert ⁹ it in order that it may not shoot, ¹⁰ but may draw all the nourishment into itself. This some

do also with purse-tassels, when they lay them by ¹
² However the root of edder-wort (for a kind of cuckoo-pint is so called because of its variegated stem) is not good for food, but is used for drugs

But the root of the plant called corn-flag is sweet, and, if cooked and pounded up and mixed with the flour, makes the bread sweet and wholesome. It is round and without 'bark,' and has small offsets like the long onion Many of them are found in moles' runs 3; for this animal likes them and collects them.

⁴ The root of theseion is bitter to the taste, but when pounded purges the bowels. There are also certain others of these roots which have medicinal properties, but of many the roots are neither medicinal nor edible. Such are the differences in the roots.

XIII. ⁵ In the leaves the differences are in size and shape. Asphodel has a long leaf, which is somewhat narrow and tough, while that of squill is broad and tears easily; corn-flag, which is called by some xiphos ('sword'), has a sword-like leaf, whence its name, and iris one more like a reed. That of cuckoopint, in addition to being broad, is concave and like that of cucumber, that of the narcissus is narrow substantial and glossy, those of purse-tassels and plants of that character are quite narrow, and that of crocus narrower still

⁶ Some have not a stem at all, nor a flower, as the edible cuckoo-pint; some have only the flower-stem, as narcissus and crocus; some however have a stem, as squill purse-tassels iris and corn-flag; but asphodel

has the tallest of all-for the antherikos (asphodelstalk) is very tall: that of iris is smaller, but tougher, though in general it is like the asphodel-stalk. Asphodel also produces much fruit, and its fruit is woody: in shape it is triangular and in colour black; it is found in the round vessel which is below the flower, and it falls out 1 in summer when this splits open. It does not produce all its flowers 2 at once: in which respect it resembles squill, but the flowering begins at the bottom. In the stalk of asphodel forms a grub which changes into another creature like a hornet, and then, when the stem withers, eats its way out and flies away. A peculiarity of the plant as compared with others which have a smooth stem appears to be that, though it is slender, it has outgrowths at the top. It provides many things useful for food: the stalk is edible when fried, the seed when roasted, and above all the root 3 when cut up with figs; in fact, as Hesiod says,4 the plant is extremely profitable

Now all bulbous plants are tenacious of life, but especially squill; for this even lives when hung up and continues to do so for a very long time; it is even able to keep other things that are stored, for instance the pomegranate, if the stalk of the fruit is set in it; and some cuttings 5 strike more quickly if set in it; and it is said that, if planted before the entrance door of a house, it wards off mischief 6 which threatens it. All these bulbs grow in masses, as do onions and garlic; for they make offsets from the root, and some

plamly are also increased by seed, as the asphodel polyanthus narcissus corn-flag and purse-tassels.

However it is said to be a peculiarity of pursetassels that all the seeds do not germinate at once, but some in the same year, some the next year; a like account is given of angilops 1 and trefoil. If then this is true, it is not peculiar to this plant. Nor perhaps is the following characteristic, which is not found in many plants and is marvellous wherever it does occur—and it is found in squill and narcissus: namely that, whereas in most plants, whether those originally planted or those which are produced from them in season, the leaf comes up first and then presently the stem, in these plants the stem comes up first.

In the case of narcissus it is only the flower-stem which comes up, and it immediately pushes up ² the flower. But in squill it is the stem ³ proper which thus appears, and presently the flower appears emerging ⁴ from and sitting on it. And it makes three flowerings, ⁵ of which the first appears to mark the first seed-time, the second the middle one, and the third the last one; for, according as these flowerings have occurred, ⁶ so the crops usually turn out. But, when the flower-stem ⁷ has waved old, then the growth of the leaves follows many days later. So also is it with narcissus, except that it has no second stem besides the flower-stem, as we said, nor any visible fruit; but the flower itself

perishes with the stem, and when it has withered, then the plant puts up its leaves

These two plants then, as compared with the other bulbous plants are peculia; and, as compared with those which bloom before the leaves and stems appear (as the autumn squill 1 seems to do, and other plants with conspicuous flowers, as well as, among trees, the almond especially, if not alone), there is the distinction that, while these two put forth their leaves along with the flowers or 2 immediately afterwards (so that about some the matter is uncertain) in 3 the case of these two the flower appears, as it were, from a different starting-point, there being a considerable number of days in between, and the growth of the leaves not beginning till,4 in the case of one of them, the flower, and in the case of the other, the whole stem has withered. Squill produces its leaves before the flower, narcissus afterwards; but the latter produces much more abundant foliage. and the individual 5 root is small 6 rather than large. resembling purse-tassels in shape, except that it is not formed of scales.7 About these matters then there is doubt

Of purse-tassels it is plain that there are several kinds; for they differ in size colour shape and taste. ⁸ In some places they are so sweet as to be eaten raw, as in the Tauric Chersonese. But the greatest and most distinct difference is shown by the 'wool-bearing' purse-tassels; for there is such a kind, and it grows on ¹⁰ the sea-shore, and has the wool beneath the outer tunic, so that it is between

the edible inside and the outside: of it are woven felt shoes and other articles of apparel. Wherefore ¹ this kind is woolly and distinct from the Indian kind, which is harry.

² There are also several kinds of plants of the same class as purse-tassels ³ such as snowdrop star-flower opition ⁴ lyix, and to a certain extent Barbary nut. These belong to this class only in having round roots; for in colour ⁵ they are white, and the bulbs are not formed of scales. A peculiarity of Barbary nut is that the lower end of the root grows first, and this is called; it grows ⁶ during winter, but, when spring appears, it decreases, while the upper part, which is edible, grows. Such are the differences in these plants.

Of certain properties and habits peculsar to certain herbaceous plants.

XIV. There are also the following peculiarities in herbaceous plants, for instance that 7 which we find in 'wet-proof' (maidenhair); 8 the leaf does not even get wet when it is watered, nor does it catch the dew, 9 because the dew does not 10 rest on it; whence its name 11 There are two kinds, the white 'wet-proof' (English maidenhair), and the black (maidenhair); and both are useful to prevent the falling off of the hair of the head, for which purpose they are pounded up and mixed with olive-oil They grow

ENQUIRY INTO PLANTS, VII. AIV. 1-XV. 1

especially in damp places. Some think that trikhomanes 1 (English maidenhair) is also useful in cases of strangury. Its stem is like that of the black kind, but it has small leaves, which are close set and grow in opposite pairs; there is no root below, and the plant loves shady places.

Of those plants which do not flower all at once anthemon has the peculiarity that, while in all others 2 the lower part flowers first, in this plant it is the upper part which does so; the outer circle of the flower is white, 3 and the centre green 4; and the fruit falls off, as in spinous plants, leaving the attach-

ment bare There are several forms of it.

⁵ Bedstraw has the peculiarity that it sticks to clothes owing to its roughness, and it is hard to pull away; indeed it is in this rough part that the flower is contained: it does not project nor show, but matures within itself and produces seed; so that its habit is like that of weasels and sharks; for, as these animals ⁶ likewise produce eggs in themselves and then bear their young alive, so this plant keeps its flower within itself, matures it and produces fruit.

XV. ⁷ As to these plants whose flowering time is dependent on the heavenly bodies, ⁸ as the plant called *heliotropion*, golden thistle (for this also blooms at the solstice), and also 'swallow-plant' (greater celandine)—for this blooms when the ⁹ Swallow-wind blows—the reason in these cases would seem to be partly in their nature and partly accidental.

BOOK VIII

OF HERBACEOUS PLANTS CEREALS, PULSES, AND 'SUMMER CROPS.'

Of the three classes and the times of sowing and of germination.

I. Let the above suffice for an account of the other herbaceous 1 plants; let us now discuss corn and corn-like plants in the same manner as those already treated; for this class of herbaceous plants we reserved.

² There are two principal classes; there are the corn-like plants such as wheat barley one-seeded wheat rice-wheat and the others which resemble either of the first two; and again there are the leguminous plants, as bean chick-pea pea, and in general those to which the name of pulses is given. Besides these there is a third class, which includes millet ³ Italian millet, sesame and in general the plants which belong to the summer seed-time, ⁴ which lack any common designation

There is only one single way of propagating these; they grow from seed, except that some may grow rarely and scantily from a root. There are two seasons for sowing most of them; the first and most important is about the setting of the Pleiad 5; this rule we find even Hesiod 6 following with

6 Hes Op. 383

most authorities; wherefore some call it simply 'the seed-time.' Another time is at the beginning of spring after the winter equinox. However different crops are sown at the two seasons. For some of them love to be sown early, some late because they cannot bear the winters, while some will do not amiss at either season, both towards winter and towards spring.

Crops sown early are wheat and barley, and of these the latter is sown the earlier; also rice-wheat one-seeded wheat olyra, and others which resemble wheat. For all of these the time of sowing is about the same. Of legininous plants bean and okhros, it may be said, are specially sown at this time; for these on account of their weakness like to be well rooted before the winter. Lupin is also sown early; in fact they say it should be sown straight from the threshing-floor.

Those which are sown late are certain special varieties; of these very kinds, as a certain kind of wheat, and of barley the kind which is called 'three months barley' because it takes that time to mature; and among leguminous plants lentil tare pea. However some of these plants are sown at both seasons, as vetch and chick-pea; some also sow beans late, if they have missed the first seed-time. To speak generally, some crops are sown early because of their robustness, since they can stand the winters, some because of their weakness, so that their growth may be secured in the fine weather. These then are the two seasons; the third is that of the summer crops of which we

spoke, in which are sown millet Italian millet sesame, and also erystmon and hormmon. Such then are the times for each.

Some are quicker in coming up, some slower. Barley and wheat generally come up on the seventh day, but barley is the earlier. Pulses take four or five days, except beans; for they, like some kinds of corn, require a longer time; in some places they take as much as fifteen days, or even twenty. This crop indeed is the slowest to start of all, and if after the sowing there is a long spell of wet weather, it is extremely slow. Whether the sprouting of crops sown at the spring seed-time is quicker because of the season is matter for enquiry.

These times of sprouting or germination must be taken generally; for at some times and places germination takes fewer days, as with barley in Egypt, where it is said to come up on the third or fourth day; while elsewhere it takes longer than the period mentioned, which is not surprising when both soil and climate are different, when one makes the sowing earlier or later, and when the crop is subjected to different influences afterwards. For open light soil with a favourable climate produces quick and easy growth, while soil that is sticky and heavy tends to slow growth, and that of a specially dry district to slower growth still.

Moreover the time of growth is affected, according as storms supervene, or droughts, or fine weather or again rain; for these conditions make wide differences. So too it makes a difference if the

ground has been well tilled ¹ and given dung, or if neither of these things has been done: for the soil makes a difference even as to the early or late germination of each crop. In Hellas some are used to sow everything earlier because of the coldness of the soil, for instance the Phocians; ² the object being that the winter may not overtake the crop while it is still tender.

Of differences in the mode of germination and of subsequent development.

II. In germinating some of these plants produce their root and their leaves from the same point, some separately, from either end of the seed. Wheat barley one-seeded wheat, and in general all the cereals produce them from either end, in a manner corresponding to 3 the position of the seed in the ear, the root growing from the stout lower part, the shoot from the upper part; but the part corresponding to the root and that corresponding to the stem form a single continuous whole. Beans and other leguminous plants do not grow in the same manner, but they produce the root and the stem from the same point. namely the point at which the seed is attached to the pod, which, it is plain, is a sort of starting point of fresh growth. In some cases there is also a formation resembling the penis, as in beans chick-peas and especially in lupins; from this 4 the root grows downwards, the leaf and the stem upwards.

There are then these different ways of germinating; but a point 5 in which all these plants agree is that they all send out their roots at the place where

The passage looks as if it had been deliberately tampered with by someone who misunderstood it

ENQUIRY INTO PLANTS, VIII. 11. 2-3

the seed is attached to the pod or ear, whereas the contrary is the case with the seeds of certain trees, as almond hazel acorn 1 and the like. And in all these plants the root begins to grow a little before the stem; whereas in certain trees 2 the bud first begins to grow within the seed itself, and, as it increases in size, the seeds split—for all such seeds are in a manner in two halves, and those of leguminous plants again all plainly have two valves and are double—and then the root is immediately thrust out; but in cereals,3 since the seeds are in one piece,4 this does not 5 occur, but the root grows a little before the bud.

Barley and wheat come up with a single leaf, but peas beans and chick-peas with several ⁶ All the leguminous plants have a single woody root, and also slender ⁷ side-roots springing from this. The chick-pea is about the deepest rooting of these, and sometimes it has side-roots; but wheat barley and the other cereals have a number of fine roots, wherefore they are matted together. ⁸ Again all such plants have many branches and many stems. And there is a sort of contrast between these two classes; the leguminous plants, which have a single root, have many side-growths above from the stem—all except beans; while the cereals, which have many roots, send up many shoots, ⁹ but these have

ENQUIRY INTO PLANTS, VIII, 11. 3-5

no side-shoots-except such sorts of wheat as are called sitanias and krithamas ('barley-wheat').

During winter cereals remain in the blade, but, as the season begins to smile, they send up a stem from the midst and it becomes jointed. 2 And it comes to pass that the ear also at once appears in the third, or in some cases in the fourth joint, though it is not distinctly seen in the mass of growth (the whole stem contains more joints than three or four), so that it must be formed at the same time that the straw grows or but a little later; though it does not become conspicuous till it has first swollen and formed in the sheath,3 and by that time its size makes its development visible.

Four or five days after being set free 4 wheat and barley flower and remain in bloom for a like number of days; those who put the period at the longest say that the bloom is shed in seven days other hand the flowering period of leguminous plants lasts a long time; that of vetch and chick-pea is longer than that of most, but that of the bean is far longer than that of any of them; they say that it is in bloom for forty days; some however give this period absolutely, others say that at different times different parts are in flower,6 since the whole plant does not flower at once For plants with an ear bloom all at once, but plants with pods and all leguminous plants bloom part at a time; the lower part blooms first, and, when this bloom has fallen, the part next above it, and so on up to the top.

Wherefore, at the time when some of the vetches are gathered, the lower seeds have already fallen,

while the upper ones are still quite green.

After the flowering is over wheat and barley develop and mature in about forty days; one-seeded wheat and other such plants take about the same time. So too, they say, does the bean, which blooms and matures in a like number of days: but the others take fewer, and fewest of all the chick-pea, since, as some say, it takes only forty days from the time when it is sown to that when it is mature; and in any case it is clear that the plant as a whole develops very rapidly. Millet sesame Italian millet and the summer crops in general, it is fairly well agreed, take the same number of days, that is, forty; though some say that they take less

Of differences in development due to soil or climate.

² Again as to the development of the plant there are differences according to soil and climate. Some soils seem to produce the crop in fewer days; for instance, Egypt may be given as a specially conspicuous example; in that country barley is reaped in six months and wheat in seven; while in Hellas the barley ³ harvest is in the seventh month, or in most parts in the eighth, and wheat requires an even longer time. However even in Egypt the whole harvest is not gathered at such an early date, but only what is required for the first-fruits; for they gather new grain for the meal required in certain sacrifices in the sixth month, and that too in the regions high up the Nile, above Memphis.

It is said also that in the Messenian district in

ENQUIRY INTO PLANTS, VIII. 11. 8-9

Sicily at the place called Mylae the late sown crops mature rapidly; thus the sowing of pulses goes on for six months, but he that made the last sowing gathers his crop at the same time as the first: also that the soil is exceedingly good, so that it yields thirty-fold 1; and there are also wonderful pastures and forest-land. They tell of an even more wonderful thing in Melos²; there they reap thirty or forty days after sowing; wherefore it is a saying of the islanders that "one should continue sowing till one sees a swathe." However it is said that pulses in their country do not grow like this, nor are they abundant. Yet they say that the soil is wonderfully productive; for it is good both for corn and olives, and fairly good for vines.

However what occurs in Chalkia, an island belonging to the Rhodians, goes even beyond this and is more extraordinary than all the instances given; there they say that there is a place which is so early and so fertile that, when the barley is sown after reaping the crop with the other crops, they then sow again, and then reap the crop thus sown at the same time as the remaining crops; this then, if it be true, marks a difference greater than we find anywhere else. For it is less surprising that there should be a difference in crops transferred to another region, as they say occurs when they are transferred from Cilicia to Cappadocia or in general beyond the Taurus; for these regions are obviously very dissimilar

ENQUIRY INTO PLANTS, VIII, 11. 10-111, 1

But that one particular land should produce two crops in the time that other lands to which it is close take to produce one, is very remarkable; wherefore Chalkia exhibits the greatest difference.

The crops grown in other regions show not much, if any, dissimilarity as to time; those grown at Athens are only about thirty days or not much more before those of the Hellespont region. Now, if the sowing should turn out to be also earlier, that would shift the season back 1; if it is at the same time, it is plain that the difference of time would be greater.2

Again the particular district makes a considerable difference, even as between places which are not far apart; thus the crops of Salamis are far earlier than those of the rest of Attica, and so in general are those of places by the sea; and this applies to other fruits as well as these: for instance, those of the place called Akte in the Peloponnese and of Phalykos³ in the Megarid are early; but here something is contributed by the fact that the soil is light and clumbling. Such are the facts in regard to growth and development.

Of differences between the parts of cereals, pulses, and summer crops respectively.

III There are also differences between 4 the whole classes which we have mentioned, namely cereals leguminous plants 5 and summer crops, as well as between the several members 6 of the same class. Cereals have the leaf of a reed, while of

leguminous plants some have a round leaf, as beans and most others, some a more oblong leaf, as pea lathyros okhros and the like. ¹ Some again have fibrous leaves, others leaves without veins and fibres. Again sesame ² and erysimon ² have leaves quite distinct from these.

Again the stem of cereals is jointed and hollow: wherefore it is called the 'reed,' while that of the bean is hollow,3 and that of the other leguminous plants is more woody, that of chick-pea woodiest of all; of the summer crops that of millet and Italian millet 4 is reed-like, that of sesame and erysimon is more like the stem of ferula. again have erect stems, as wheat barley and in general the cereals and summer crops; some have rather a crooked stem, as chick-pea vetch lentil; some a creeping stem as okhros pea lathyros; while calavance, if long stakes are set by it, climbs them and becomes fruitful, whereas otherwise the plant is unhealthy and liable to rust; the bean, most of all leguminous plants, if not 5 alone among them, has an erect stem.

The flowers also shew differences in character and in position (of which matters we have to some extent treated in our general account) 6, thus some are 'downy,' as those of corn 8 and of any plant that has an 'ear'; others are 'leafy,' 9 as those of leguminous plants, and in most cases they are irregular 10 flowers; for most of these have

such flowers. Those of millet and Italian millet ¹ are also 'downy,' ² those of sesame and erysimon 'leafy.' Another difference is that in some cases the flowers are round the fruit; thus those of corn and millet are round the ear; while in leguminous plants the fruit comes as it were from the flower itself, or at least from the same starting-point. Another difference is that some produce all their flowers at once, others in succession. And there are other differences akin to these.

In like manner there are differences in the fruits; some have an 'ear,' leguminous plants a pod, and millet-like plants a 'plume'3—which is the name given to an inflorescence 4 such as reeds have. Again, generally speaking,5 some have their seeds in a vessel,6 some in pods,7 some naked; and further some bear their fruit at the top, some at the sides; and there are other differences which bear on this enquiry.

In general the leguminous plants produce more fruit and are more prolific, and the summer crops millet and sesame are even more so than these, while among the leguminous plants themselves lentil is the most prolific. § Generally speaking, those that have small seeds are more prolific, as cummin among pot-herbs, which are all prolific of seed. The seeds of cereals are more robust as to standing winter and conditions of climate generally, while those of leguminous plants are stronger as to providing food. § However it may be that in this respect

the other animals are affected in the opposite 1 way to men.

Of the differences between cereals.

IV. There are then these differences ² between the various classes; and as between plants of the same class ³ there are plainly differences due to the unlikeness in the various parts. Thus among cereals wheat as compared with barley has a narrower leaf, and a smoother stem of closer texture tougher and less brittle ⁴. Again the seed of wheat has several coats, ⁵ that of barley is naked, that plant having its seeds specially naked. Also one-seeded wheat rice-wheat and all such plants have their seed in several coats, and above all, it may be said, is this true of oats. ⁶ Also the 'reed' of wheat is taller than ⁷ that of barley, and wheat has its ear less distant from the 'leaf.'

Further the husk of wheat is distinct ⁸ from that of barley, being less dry and softer. Barley also differs from wheat in this respect; it has grains in a regular row, ⁹ whereas those of wheat are not in a row, but the ear is as it were quite simple in form. ¹⁰

Such then are the differences as between one whole kind and another. But in each of these kinds again, for instance in barley and wheat, there are many sub-divisions differing both in the actual fruits, in the ear, and in the other characteristic

features; and again in capacities 1 and properties.2 ⁸ Of barley different sorts have respectively two, three, four, and five rows of seeds; the largest number 4 known is six, for there is a kind which bears that number. And those which have more rows have generally the grains set closer together. Another great difference is that of having side-shoots, as we said of the Indian kind 5 Again in barley 6 the ears are in some kinds large and of looser make, in some smaller and set closer; in some kinds the ear is some way from the 'leaf,' in some it is nearer to it, as in the kind called 'Achillean.'7 Again of the grains themselves some are rounder and smaller, some more oblong and larger and set at wider intervals on the ear. Moreover some are white, some black or reddish, and the latter are thought to produce much meal and to be more robust than the white as to bearing winter wind or conditions of climate generally.

There are ⁸ also many kinds of wheat which take their names simply from the places where they grow, ⁹ as Libyan Pontic ¹⁰ Thracian Assyrian Egyptian Sicilian. They show differences ¹¹ in colour size form and individual character, and also ¹² as regards their capacities ¹³ in general and especially their value as food. Some again get

their distinctive names for other reasons, as kankhrudias stlengus 1 'Alexandrian'2; all of which must be distinguished by the above-mentioned 3 characters. Again, if one takes such differences as the following, they are quite characteristic—thus some are early, some late, some are vigorous and prolific, some are small 4 and produce little, some have a large, some a small ear. The ears of some remain 5 a long time in the sheath,6 of some it remains but a short time, as that of the Libyan kind. Again some have a slender, some a stout haulm; the Libvan kind has this characteristic also, and that of kankhrydias is also stout. Again the grain of some has few coats,8 of some many, for instance the Thracian 9 Some kinds have a single 'reed,' some more than one, and in the latter class the number varies.

10 So too must we distinguish any differences like these or those mentioned above which are found in the several capacities; for these would seem to be the most essential differences. In this connexion we may distinguish kinds which mature in three or in two months, and those, if there be such, which take a less number of days; for instance, they say that in the region of Ameia there is a kind which ripens and attains perfection within forty days from the time of sowing; they say too that this grain is strong and heavy, not light like that which takes three months; wherefore they give it even to the servants, for it also does not contain much bran. Now this kind is the raiest and the quickest to

ENQUIRY INTO PLANTS, VIII. IV. 4-6

But there is also a kind which takes two months, this was brought to Achaia from Sicily; it is not however prolific nor fertile, though as food it is light and sweet There is another such kind which grows in Euboea and especially in the region of Karystos. There are several kinds that take three months, and these, wherever they are found, are light and not prolific; their growth consists of a single 'reed,' and in general they are not robust Lightest of all we may say is the Pontic wheat, the Sicilian is heavier than most of those imported into Hellas, but heavier still than this is the Boeotian; in proof of which it is said that the athletes in Boeotia consume scarcely three pints,1 while, when they come to Athens, they easily manage five.2 The Laconian kind is also light. The reason for these differences is to be found in the respective soils and in the climate; 3 for in Asia not far from Bactra they say that in a certain place the corn is so vigorous that the grains grow as large as an olive-stone, while in the country called that of the Pissatoi it is so strong that, if a man eats too much of it, he bursts, which was actually the fate of many of the Macedonians.4 There is one curious thing about the corn of Pontus, which is an exception 5 to the rule as to the lightness of crops raised in three months; for there the hard crops are those of the spring, the soft ones those of the winter; for soft kinds are exceedingly light. Two sowings, as it appears, are made of all corn

alike, one in winter and one in spring, at which time

they also plant the seed of the pulses.1

Some kinds are free from darnel, as the Pontic and the Egyptian; the Sicilian is also fairly free from it, and that of Akragas is especially immune from darnel.

² Peculiar however to the Sicilian is the plant called *melampyron*, ³ which is harmless ⁴ and not, like the darnel, injurious and productive of headache. ⁵ However such peculiarities, as was said, must be ascribed to the soil, and to a certain extent ⁵ to the different characters of different kinds.

Of the differences between pulses.

V In pulses we cannot find such differences to the same extent, whether for the want of equally careful enquiry or because there is actually less diversity in these plants ⁷ For, apart from chickpea lentil and to a certain extent bean and vetch (in so far as in these we find differences of colour and taste), among the rest ⁸ no distinct forms are recognised. Chick-peas however differ in size colour taste and shape, thus there are the varieties called 'rams,' 'vetch-like' chick-peas and the intermediate forms.⁹ In all pulses the white are the sweeter, and this applies to vetch lentil chick-pea bean and sesame, of which also there is a white form

¹⁰ However it is more possible to recognise the differences in such points as these:—all these plants have pods,¹¹ but whereas the pods in some kinds have

ENQUIRY INTO PLANTS, VIII. v. 2-4

no divisions, but the seeds as it were touch one another, as in vetch pea and most kinds, in some there are divisions, as in lupin and still more in sesame, in which the divisions are of a peculiar kind. Again some have long, some round pods, as chick-pea And the number of seeds follows in proportion, since they are fewer in the small pods, as in those of chick-pea and lentil.

Possibly these differences correspond to those which we mentioned in the case of cereals as to the ears and the actual fruits; for what are called 'pods' also fairly correspond to the shape of the seeds, some being flat, as those of lentil and tare, some more or less cylindrical, as those of vetch and pea 'for in the case of either pair of plants the seeds correspond in shape. However one might discover and distinguish many such differences, of which some are common to a whole kind, others special to particular varieties

In all cases the seeds are attached to the pods and have a sort of starting-point, which in some cases projects, as in bean and chick-pea, in some is hollow, as in lupin and some others, and in some is not thus conspicuous but smaller and, as it were, only indicated, this is plain from observation, it is from this point that the seeds germinate and take root when they are sown, as was said s: but to start with they are themselves nourished by being so attached to the pod until they are matured. This

8821

⁵ ie as does the form of the ear in cereals.

and sun, as well as the soil itself, he would more

properly gauge1 the differences.

Similarly manuing 2 for the sown crops should be done with regard to the soil; and it is better to turn up fallow 3 land in winter than in spring. And there are some 4 places in which deep ploughing is not expedient, as in Syria; wherefore they use small plough-shares. In other parts to work the ground too much is injurious, as in Sicily: wherefore many settlers in the country, it appears, make a mistake From every point of view 2 therefore the soil must be considered.

The seeds are also classified according as each suits a particular soil; in wintry lands wheat is sown rather than barley, and in general they say 6 that corn rather than leguminous plants should be sown in barren soils which are only disturbed 7 at long intervals; and such soils bear wheat better than barley. 8 Moreover wheat welcomes abundant rain 9 more than barley, and bears better on land which is not manured. 10 In like manner they distinguish among wheats themselves which suits which kind of soil, namely which grows best in good 11 fat soil and which in crumbling light soil, and 12 so on with other kinds of soil.

18 More abundant rain is beneficial to all crops when they have come into leaf and formed the flower; however it is harmful to wheats and barleys and other cereals when they are actually in flower; for

it destroys the flower. But to pulses it is harmless, except to chick-peas; for these, if the salt is washed off them, perish from rot 1 or from being eaten by caterpillars. However the black and the red 2 chick-pea are stronger than the white, and it is beneficial, they say, to sow this crop late in moist soil. The bean 3 likes especially to receive rain when it is in flower; wherefore men are unwilling, as we said, to sow it late, because it flowers for a long time; but after it has shed its flowers, it needs 4 very little water, since its time of maturity is now near But, when cereals have matured, it appears that water actually injures them, and barley more than wheat.

In Egypt Babylon and Bactra, where the country receives no rain, or 5 but little, the dews are sufficient nourishment, and so is it also 6 in the regions about Cyrene and the Euesperides. However to all. generally speaking, it is the spring rains which are the most seasonable; and that is why Sicily is rich in corn; for there is abundance of soft rain in spring and little of it in winter. A light soil requires plenty of rain, but little at a time; while that which is fat can indeed bear both an abundance of rain and a drought; (for a droughty country seawinds 7 and breezes seem to be helpful, and various breezes of this kind prevail in various countries, as has been said already). Yet in general drought suits corn better than excessive rain; for heavy showers, apart from the harm which they do in other ways, often actually destroy the seed, or at

least cause a luxuriant growth of leafage, so that the grain is choked and becomes abortive.

Of the degeneration of cereals into darnel.

VII. 1 Now, while it is not the nature of any other of these seeds to degenerate and change into something else, they say that wheat and barley change into darnel, and especially wheat, and that this occurs with heavy rains and especially in well-watered and ramy districts But that darnel is not a plant of the spring, like other weeds 2 (for some endeavour 3 to make this out) is clear from the following consideration: it springs up and becomes noticeable directly 4 winter comes, and it is distinguished in many ways; the foliage 5 is narrow abundant and glossy, and this gloss is the most marked of these differences; (the 6 leaves of augilops 7 are indeed also abundant, 8 but this character does not shew itself in them till spring). then is peculiar to the seeds of wheat and barley, and also to those of flax; for that too, they say, turns into darnel

Of the peculiar character of chick-pea.

A peculiarity of chick-pea as compared with other leguminous plants is that which has been mentioned as to its flowering; and also the fact that it is the quickest to mature its fruit, being very strong and woody; and again there is the fact that in

general it does not reinvigorate the ground, is since it exhausts it; but it destroys weeds, and above all and soonest caltrop. And in general it is not every kind of soil which suits it; the soil should be black and fat. Of the other leguminous plants the bean best is reinvigorates the ground, even if it is sown thick and produces much fruit.

Of special features of 'summer crops'

All those crops sown at the summer seed-time need little water, and they say also that spring water is better for them than rain water; and Italian millet s and millet need less water, for, if they have too much, they shed their leaves. Millet is the robuster plant, Italian millet is sweeter and less robust. Sesame and lupin are not eaten green by any animal ; whether the same is true of erysmon and horminon is matter for enquiry; for these too are bitter. Erysmon is like sesame and is oily; horminon is like cummin and black, and is sown at the same time as sesame. These matters then require investigation.

Of treatment of cereals peculiar to special localities

¹⁰ In good soils to prevent the crop running wildly to leaf they graze and cut down the young corn,

ENQUIRY INTO PLANTS, VIII VII. 4-5

for instance in Thessalv. And the result is that, however often they graze it, the crop is not impaired: while if they cut it down not more than once, the wheat changes in character and becomes tall and weak-what they call 'long-shafted' corn, and, if seed of this is sown, it does not recover its character. This the Thessalians tell of as having occurred in a few cases. At Babylon however they cut it down twice always and as it were systematically, and after that they let the sheep on to it: for in that case it makes its straw, but otherwise it runs wildly to leaf; and, if the ground is ill cultivated, it produces fifty fold, if it is carefully cultivated, a hundred fold. And the 'cultivation' consists in letting the water lie on it as long as possible, so that it may make much silt1; for the soil being fat and close must be made open. And at Babylon 2 the ground does not produce weeds and grasses, as it does in Egypt Such are the things which depend on the quality of the soil.

Of cereals which grow a second time from the same stock.

³ Wheat and barley also in many places grow from the root in the next year, or in the same year from crops cut down for fodder, since a second haulm shoots up. The like happens also if the plant has been nipped by winter; for it shoots again when rain comes; but such plants produce an ear which is imperfect and under-sized. There is also new growth the next year from plants which are roughly treated or trodden down ⁴ so that hardly anything remains visible, as happens when an army has marched over

διέλθη στρατόπεδον, καὶ οἱ στάχυες μικροὶ καὶ τούτων, οθς καλοῦσιν ἄρνας τῶν δὲ χεδροπῶν οὐδὲν δύναται τοιοῦτον ποιεῖν ἡ οὐχ ὁμοίως. καὶ αἱ βλαστήσεις τοσαυταχῶς.

the field; the ears in such cases 1 too are undersized and are called 'lambs.' But no kind of leguminous plant 3 can do anything of the kind, or at least not to the same extent In these various ways 4 may new growth occur

Of the effects of climate, soil, and manuring.

For growth and nourishment the climate is the most important factor, and in general the character of the season as a whole; for when rain, fair weather and storms occur opportunely, all crops bear well and are fruitful, even if they be in soil which is impregnated with salt or poor. Wherefore there is an apt proverbial saying 5 that "it is the year which bears and not the field.

But the soil also makes much difference, according as it is 6 fat or light, well watered or parched, and it also makes quite as much difference what sort of air and of winds pievails in that region; for some soils,7 though light and poor, produce a good crop because the land has a fair aspect in regard to sea breezes. But, as has been repeatedly said already, the same breeze has not this effect in all places; some places are suited by a west, some by a north, some by a south wind

Again the working of the soil and above all that which is done before 8 the sowing has an important effect; for when the soil is well worked it bears easily. Also dung is helpful by waiming and ripening the soil, for manued land gets the start by as much as twenty days of that which has not been

manured. However manure is not good for all crops; and further it is beneficial not only to corn and the like but to most other things, except fern, which they say it destroys if it is put on. (Fern is also destroyed if sheep lie on it, and, as some say, lucerne is destroyed by their dung and urine.)

Of different qualities of secd.

VIII There is a particular kind of soil 2 which best suits each kind of seed, whether we compare one class with another or those of the same class; and attempts are made to distinguish these.3 Foreign seeds change into the native sorts in about three years. It is well that they should be imported from a warm climate to one that is rather less warm, or from a cold one 4 to one that is rather less cold. Those imported from a wintry climate, if they be those of early crops, are late in coming into ear,5 so that they get destroyed by drought unless rain late in the season saves them Wherefore they say that one should take good heed not to mix foreign with native seeds, unless they come from a similar place, since 6 they do not agree with the soil 7 as to the time of being sown and of germinating, and accordingly need different cultivation; and so that one should take good heed to the differences of soil. the properties of the seed, and further the seasons appropriate to each.

When however there is a good season, the grain also is fuller.⁸ For instance at Athens the barley pro-

ENQUIRY INTO PLANTS, VIII. viii. 2-3

duces more meal than anywhere else, since it is an excellent land for that crop; and this is so, not merely when a very large crop is sown, but when the weather has been favourable for it. And in Phocis about Elateia the wheats produce half as much meal again as elsewhere; while at Soli in Cilicia this is true of both wheat and barley; and in other parts there are other crops for which the soil is severally well adapted. Wherefore grain turns out better or worse because of the soil as well as because of cultivation; for in some places it changes into the cultivated from the wild foim, or the reverse, like trees; and in general it changes according to the soil in which it is grown, just as some ties, when transplanted, forthwith deteriorate.

Of degeneration of cereals, and of the weeds which infest particular crops.

But no kind can change altogether into another, except one-seeded wheat and rice-wheat, as we said in our previous discussions, and darnel which comes from degenerate wheat and barley: at least, if this is not the true account, darnel loves chiefly to appear among wheat, as does the Pontic melampyios and the seed of puise-tassels, even as other seeds appear in other crops, thus augilops seems to grow for choice among barley, and among lentils the rough hard kind of arakos, while among tares occurs the axe-weed, which resembles an axe-head in appearance. Indeed in the case of nearly every crop there is a plant which grows up with it and

mingles with it, whether this is due to the soil, which is a reasonable explanation, or to some other ¹ cause. Some plants of this character evidently attach themselves to more than one kind of crop, but, because they are specially vigorous in some one particular crop, they are thought to be peculiar to that one, as 'vetch-strangler' (dodder) to vetches and bedstraw to lentils. But the former gains the mastery over the vetches especially because of the weakness of that plant; and bedstraw is specially luxurant among lentils, to some extent it resembles dodder, in that ² it overspreads the whole plant and holds it fast as it were in coils, ³ for it is thus that dodder strangles the plant, and this is the origin of its name ('vetch-strangler')

⁴The plant which springs up straight from the roots of cummin and the plant called broom-rape which similarly attaches itself to 'ox-horn' ⁵ (fenugreek) are somewhat more peculiar in their habits. ⁶ Broom-rape has a single stem, ⁷ and is not unlike . . . , ⁸ but is much shorter and has on the top a sort of head, while its root is more or less round; and there is no other plant which it starves except fenugreek. These plants glow in light and not in fat soils; thus in Euboea they do not occur at Lelanton, ⁹ but only about Kanethos ¹⁰ and in districts of like character.

ENQUIRY INTO PLANTS, VIII. viii. 5-7

The reason then why these plants, which attach themselves to more than one kind, grow stronger when attached to the plants specified, is that the latter are not robust.

Of the conditions in the seeds of pulses known as 'cookable' and 'uncookable,' and their causes.

¹The terms 'cookable' and 'uncookable' are only applied to pulses, but it is not unleasonable to suppose that conditions like those indicated, if not identical with them, occur also in cereals, though they are not so obvious, since these plants are not put to the same use. Indeed it is said that these terms are not applied even to all pulses alike, but chiefly to beans and lentils, either because these are specially subject to these conditions, or because the use to which they are put makes them more conspicuous. At all events the conditions occur for a variety of reasons; for in many parts 2 there are places which regularly produce seeds that are 'cookable,' while others again produce seeds that are 'uncookable'; in general however it is light soils which tend to produce the former. Now it is a certain condition of the climate which causes this variation; a proof of which is the fact that the same piece of land, tilled in the same manner, produces sometimes seeds that are 'cookable,' sometimes seeds that are 'uncookable's In the district of Philippi, if the beans, while being winnowed,4 are caught by the prevailing wind of the country, they become 'uncookable,' having previously been 'cookable.' These facts prove that for various reasons, of districts 5 which are close together, have the same

aspect and shew no difference of soil, some bear 'cookable' some 'uncookable' seeds, and that sometimes when there is only 1 the breadth of a furrow between them.

Of the grains and pulses which most exhaust the soil, or which improve it.

IX Wheat exhausts the land more than any other crop, and next to it barley; wherefore the former requires good soil, while barley will bear even on somewhat crumbling soils; ² and of leguminous plants chick-pea is the most exhausting, although this crop is in the ground only a very short time. ³ Beans, as was said, ⁴ are in other ways not a burdensome crop to the ground, they even seem to manure it, because the plant is of loose growth and rots easily; wherefore the people of Macedonia and Thessaly turn over the ground when it is in flower ⁵

Gof the plants which resemble wheat or barley—such as zeia (rice-wheat) one-seeded wheat olyra (rice-wheat) oats aigilops—zeia is the strongest and most exhausts the ground; for it has many roots which run deep and many stems; but its fruit is the lightest and is welcome to all animals. Of the rest oats is the most exhausting; for this too has many roots and many stems. Olyra is a more delicate plant and not so robust as these. But one-seeded wheat is the crop which is of all the least burdensome to the soil; for it has but a single slender stem 10; wherefore also it requires a light soil and not, like

zeia, one that is fat and good. These last two,¹ zeia and one-seeded wheat, are also those which are likest to wheat, while² aigilops and oats are as it

were wild and uncultivated things

Aigilops also greatly exhausts the land, having many roots and many stems; while darnel is a plant which has become altogether wild. Of the crops sown at the summer seed-time sesame seems to be most severe on the land and to exhaust it most; yet is millet has more numerous and stouter stems and more roots. Moreover there is a difference between crops which is are called 'light' in relation to the soil and those called 'light' in regard to human use. For some, such as leguminous plants and millet, are light in one sense but not in the other; and, as was said, what is light for men is not necessarily so for the other animals. Now enough of these matters.

Of the diseases of cereals and pulses, and of hurtful winds.

X. ⁷ As to diseases of seeds—some are common to all, as rust, some are peculiar to certain kinds; thus chick-pea is alone subject to rot ⁸ and to being eaten by caterpillars and by spiders ⁹; and some seeds are eaten ¹⁰ by other small creatures. Some again are liable to canker and mildew, ¹¹ as cummin But creatures which do not come from the plant itself but from without do not do so much harm; thus the kanthans ¹² is a visitor among wheat, the

phalangion in vetches, and other pests in other crops.

Generally speaking, cereals are more liable to rust 2 than pulses, and among these barley is more liable to it than wheat; while of barleys some kinds are more liable than others, and most of all, it may be said, the kind called 'Achillean.' Moreover the position and character of the land make no small difference in this respect; for lands which 8 are exposed to the wind and elevated are not liable to rust,5 or less so, while those that lie low and are not exposed to wind are more so. And rust occurs chiefly at the full moon. wheat and barley are destroyed by winds, if they are caught by them either when in flower, or when the flower has just fallen and they are weak; and this applies specially to barley, indeed it occurs when the grain is already ripening, if the winds are violent 7 and last a long time; for they dry up and parch the grain, which some call being 'wind-bitten.' Also a hot sun after cloudy weather destroys both, and wheat more than barley. so that the ear is not even conspicuous, since it is empty.

Wheat is also destroyed by grubs; sometimes they eat the roots, as soon as they appear,⁸ sometimes they do their work when by reason of drought the ear cannot be formed ⁹; for at such times the grub is engendered, and eats the haulm as it is becoming unrolled ¹⁰; it eats right up to the ear and then,

having consumed it, perishes. And, if it has entirely eaten it, the wheat itself perishes; if however it has only eaten one side of the haulm and the plant has succeeded in forming the ear, half the ear withers away, but the other half remains sound. However it is not everywhere that the wheat is so affected; for instance this does not occur in Thessaly, but only in certain regions, as in Libya and at Lelanton in Euboea.

Grubs occur also in ohhros3 lathyros and peas, whenever these crops get too much rain and then hot weather supervenes; and caterpillars occur in chick-peas under the same conditions 4 All 5 these pests perish, when they have exhausted their food. whether the fruit in which they occur be green or dry, just as wood-worms do and the grubs found in beans and other plants, as was said of the pests found in growing trees and in felled timber. But the creature called 'horned worm' 6 is an exception. Now in regard to all these pests the position makes a great difference, as might be expected. For the climate, it need hardly be said, makes a difference according as it is hot or cold, moist or dry; and it was the climate which gave rise to these pests 7; wherefore they are not always found even in places in which they ordinarily occur 8

Of seeds which keep or do not keep well.

XI. The seeds have not all the same capacity for germination and for keeping well. Some germinate

and mature very quickly, and keep excellently, as Italian millet and millet. Some germinate well, but soon rot, as beans, and especially those that are cookable?; so do tare and calavance; also barley perishes sooner than wheat; and dusty grain and that which is kept in plastered store-rooms perishes sooner than that which is kept in unplastered rooms.

Again, as seeds decay, they engender special creatures, except chick-pea, which alone engenders none. As they rot, all produce a grub; but, as they get worm-eaten, each produces a special creature. Chick-pea and vetch keep best of all, and better still than these lupin; but this, as it were, is like a wild kind.

⁹It appears that soil and climate make a difference as to whether the seed gets worm-eaten or not; at least they say that at Apollonia on the Ionian Sea beans do not get eaten in this way at all, and therefore they are put away and stored; and about Cyzicus they keep an even longer time. It also makes a great difference to keeping that the seed should be gathered dry, for then there is less moisture in tit. However the seeds of leguminous plants are gathered with a certain amount of moisture in them, it because then they can be collected in greater quantity and more easily; for otherwise they are soon shed and get shrivelled up and split. it

8 a.e and so the seed is hard and not liable to these attacks. cf. 8 11. 8; C P. 4. 16 2

and wheat and one kind of barley are gathered before they are dry, because then they are better for meal.

Wherefore the gram of wheat and barley is put into heaps, and it seems to ripen in a heap rather than to lose substance 1 (However corn does not get worm-eaten when it is leaped after exposure to rain.)² Also corn lasts better than other things if it is left standing, and so does lupin to an even greater extent; indeed this crop is not even gathered till rain has fallen,³ because, if it is gathered, the seed springs out and is lost.

Of the age at which seeds should be sown.

⁴For propagation and sowing generally seeds one year old seem to be the best; 5 those two or three years old are inferior, while those kept a still longer time are infertile, though they are still available as food. For each kind has a definite period of life in regard to reproduction However these seeds too differ in their capacity according to the place in which they are stored. For instance, in Cappadocia at a place called Petra they say that seed remains even for forty years fertile and fit for sowing, while as food it is available for sixty or seventy years; for that it does not get wormeaten at all like clothes and other stored-up articles: for that the region is, apart from this, elevated and always exposed to fair winds and breezes which prevail alike from 6 the east, the west, and the

ENQUIRY INTO PLANTS, VIII. xi. 6-7

south. They say that in Media 1 also and other elevated countries the seed when stored keeps for a long time. And it is plain that chick-pea lupin vetch millet and the like will keep a far longer time than these seeds, as they do even in districts of Hellas However these peculiarities, as has been said, are due to the particular region.

Of artificial means of preserving seed.

There appears to be a kind of earth in some places, which when sprinkled 2 over the seed helps to make wheat keep, for instance, the earth found at Olynthos and at Kerinthos in Euboea; this makes the grain inferior for food, but fuller in appearance; the earth is sprinkled 3 in the proportion of one pint to twenty-four of grain.

Of the effect of heat on seeds.

All seeds if exposed to fire perish and become infertile. Yet they say that at Babylon⁴ the grains of barley and wheat jump on the threshing-floor like corn which is being parched. However it is plain that it is some particular kind of warmth⁵ which produces this effect: or else the jumping is simply another effect of heat.⁶ Such behaviour would appear to be common to most,⁷ if not to all kinds.

5 i e. the sun's heat is different in kind, and therefore in effect, to that of a fire.

ENQUIRY INTO PLANTS, VIII. x1. 8-9

Of certain peculiarities of the seed of lupin and aigilops

Some even 1 of those kinds which seem to be more or less wild have peculiarities as to their germination and growth, for instance, lupin and aigilops. For lupin, although it is very robust, unless it is planted immediately after leaving the threshing-floor, 2 turns out of poor growth, as was said, and refuses altogether to be buried in the ground; 3 wherefore they sow it without first ploughing 4 the land And often if the seed has fallen amid thick undergrowth or herbage, 5 it thrusts this aside, fastens on to the earth with its root and grows vigorously. It seeks sandy and poor soil for choice, and will not grow at all in 6 cultivated 7 soil.

Angilops has the opposite character; it grows better in tilled soil; and in some places where at first it would not grow, if the ground is tilled, it grows and yields a large crop, and in general it likes good soil. A peculiarity mentioned in regard to it as compared with other cereal seeds is that one seed in two does not germinate for a year. Wherefore those who wish to destroy it entirely, (since it is naturally hard to destroy), leave the fields unsown for two years, and, when it springs up, send in the sheep several times till they have grazed it down, and this is a way of completely destroying it. At the same time this testifies to the fact that the seed does not all germinate at once.

OF THE JUICES OF PLANTS, AND OF THE MEDICINAL PROPERTIES OF HERBS

Of the various kinds of plant-juices and the methods of collecting them.

I. 1 Moisture belongs to plants as such and some call it the 'sap,' to give it a general name; and it plainly has 2 special qualities in each plant, This moisture is attended by a taste, in some cases more, in some less, while in some it would seem to have none, so weak and watery is it. Now all plants have most moisture at the time of making growth, but it is strongest and most shows its character when the plant has ceased to grow and to bear fruit. Again in some plants the juice has a special colour; in some it is white, as in those which have a milky juice; in some blood-red, as in centaury 8 and the spinous plant which is called distaff-thistle; in some green: and in some of other colours. And these qualities are more obvious in annual 4 plants and those with annual stems than in trees.

Again in some plants the juice is merely thick, as in those in which it is of milky character; but in some it is of gummy character, as in silver-fir fir terebinth Aleppo pine almond *kerasos* (bird-cherry) bullace Phoenician cedai prickly cedar acacia elm.⁵ For

this last also produces a gum, though it does not exude from the bark, but is found in the 'bag'1 of the leaves, there are also the juices from which come frankincense and myrrh, for these too are gums; so too are balsam of Mecca hhalbane 2 and any others of the kind that there may be, such as, they say, the Indian akantha, from which comes something 3 resembling myrrh; and a similar substance forms on mastich and the spinous plant called usine

(pine-thistle), whence mastic-gum is made

All these have a fragrant odour, as in general have those which contain a viscous substance and are fatty; while those that are not fatty have no scent. as gum and the juice which exudes from the almond. The pine-thistle 4 of Crete has also a gum, and so has the plant called tragacanth; 5 this was formerly supposed to grow only in Crete, but now it is well known to grow also in Achaia in the Peloponnese and elsewhere in Hellas and in Asia in the Median country. In all these plants the gum occurs in the stems the trunks and the branches, but in some plants it is found in the roots, as in alexanders scammony and many other medicinal plants some it is found in the stem and also in the root;6 for of some 7 plants they tap the stem and the roots as well, as is done with silphium

Now the juice of alexanders is like myrrh, and some, having heard that myrrh comes from it, have supposed that, if myrrh is sown, alexanders comes up

from it; 1 for, as was said, 2 this plant can be grown from an exudation, like the kninonia (lily) and other plants. The juice of silphium is pungent like the plant itself; for what is called the 'juice' of silphium is a gum Scammony and similar plants, as was

said,3 have medicinal properties.

In all the plants mentioned the juice either forms naturally, or when incisions are made, or in both ways,4 but it is obvious that men only make incisions in plants whose juice is of use and is specially sought after.5 Now there is no use in the gum which exudes from the almond, wherefore men do not tap However it is plain that in plants whose gum forms naturally the flow of juice is greater. incisions and the clotting of the juice do not take place at the same season in all cases; 7 but the juice of the vine clots best they say if the incision is made a little before budding begins, less well in the autumn or at the beginning of winter; (although in regard to production of fruit these 8 seasons are the best in the case of most 9 vines). However with terebinth fir or any other tree which produces resin the best time is after the period of budding; yet in general these trees are not cut every year, but at longer intervals. The frankincense and myrrh trees they say should be cut at the rising of the Dogstar and on the hottest days, and so also the 'Syrian balsam' (balsam of Mecca).

The cutting of these is also a more delicate matter

ENQUIRY INTO PLANTS, IX. 1. 7-11. 2

and is done on a smaller scale; for the flow of juice is less. In those plants whose stem and root are, both cut the stem is cut first, as also with silphium; and the juices so obtained are called respectively stalk-juice and root-juice, of which the latter is the better, for it is clear transparent and less liquid. The stalk-juice is more liquid, and for this reason they sprinkle meal 1 over it to make it clot. The Libyans know the season for cutting, for it is they that gather the silphium 2 So also do the root-diggers and those that collect medicinal juices, for these too tap the stems earlier. And in general all those who collect whether roots or juices observe the season which is appropriate in each case. And this remark applies generally.

Of resinous trees and the methods of collecting resin and pitch.

II. ³ Resin is made in the following manner:—in fir it is done by removing the resinous wood after the tree has been tapped; for then the juice flows into the hole so made in greater abundance; in silver-fir and Aleppo pine it is done by tapping the wood, after tasting it. For there is no fixed rule for all alike; thus with terebinth they tap both the stem and the branches; but the juice which runs into the stem is always more abundant and better than that which flows into the branches.

There are also differences in 4 the resin obtained from different trees. The best is that of terebinth; for it sets firm, is the most fragrant, and has the most delicate smell; but the yield is not abundant. Next comes that of silver-fir and Aleppo pine, for these are more delicate than that of the fir. But that of the fir

is the most abundant, the grossest and the most pitchlike, because this tree has the greatest amount of resinous wood. It is carried about in baskets in a liquid state, and so acquires the more solid form which we know However they say that in Syria pitch is extracted even from the terebinth by burning 1; for there is in that land a mountain which, as we said

before,2 is all covered with great terebinths.

Some 8 say the same of Aleppo pine and also of Phoenician cedar; but this must be taken as only indicating what can be done, the practice not being common; for the people of Macedonia do not extract pitch by burning even from fir, except from the 'male' kind (they call the kind which bears no fruit 4 the 'male'); the 'female' kind they only treat in this way when they have found roots containing pitch; for all firs have resinous wood extending to the roots. ⁵The finest and purest pitch is that obtained from trees growing in a sunny position and facing north ⁶; that obtained from trees growing in shade is coarser ⁷ and muddy; (in exceedingly shady places the fir does not even grow at all).

Again the yield may be either good or bad as to amount and as to quality, thus, when there is a moderate winter, it is abundant and good and whiter in colour, but, when there is a severe winter, it is scanty and of inferior quality. And it is these conditions, and not the tree's capacity for bearing fruit, which determine the amount and quality of pitch.

The people of Mount Ida distinguish different kinds of fir, calling one 'that of Mount Ida' (Corsican pine), another the 'fir of the seashore,' (Aleppo pine); and they say that the pitch obtained from the former is more abundant blacker sweeter and generally more fragrant 2 in the law state, but that boiling down reduces the amount; for that it contains a larger proportion of watery matter, wherefore it is less substantial; but that derived from the 'fir of the seashore' is browner and thicker in the raw state, so that the amount is less reduced by boiling down; that the 'fir of Mount Ida' however contains more resmous wood. And, speaking generally, they say that from an equal amount of resmous wood more pitch is obtained and in a more liquid state in wet weather than during a drought, and from a wintry and shady position than from one that is sunny and enjoys fair weather the account given by the peoples of Mount Ida and of Macedonia respectively

³ The holes for the pitch fill up, so that the pitch can be again removed, ⁴ in good firs in a year, in those of more moderate quality in two years, in poor trees in three. The filling-up is composed of the pitch; it is not caused by closing up of the wood, for the wood cannot close up and become one again, but the effect which takes the time mentioned is due to the formation of the pitch.⁵ However it is clearly inevitable that there should be some new growth of the wood too, seeing that the resinous wood is

removed 1 and burnt when the discharge of pitch takes

place. So much for this account.

² The people of Mount Ida however say that, when they bark the stem,—and they bark the side towards the sun to a height of two or three cubits from the ground,—the flow of pitch takes place in that part,³ and in about a year the wood becomes full of pitch; and that, when they have hewn this part out, pitch forms again in the next year, and in the third year in like manner, after which ⁴ that the tree, because it has been cut away underneath, is rotted by the winds and falls, and that then ⁵ they take out its heart, for that is especially full of pitch, and that they also extract pitch from ⁶ the roots; for that these too, as we said, ⁷ are full of pitch in all firs.

Now it is plainly to be expected that they should, as was said, repeatedly thus treat a good tree, but an inferior one at longer intervals, and that, if the tree is husbanded, the supply should hold out longer, while, if they remove all the pitch, it will not hold out so long; it appears as a matter of fact that the tree will stand about three such removals of its substance. § However firs do not produce both fruit and pitch at once; they begin to bear fruit when they are quite young, but they only produce pitch

much later, when they are older.

Of the making of pitch in Macedonia and in Syria

III. This is the manner in which they make pitch by fire:—having prepared a level piece of ground,

which they make like a threshing-floor with a slope for the pitch to run towards the middle, and having made it smooth, they cleave the logs and place them in an arrangement like that used by charcoal-burners,2 except that there is no pit; but the billets are set upright against one another, so that the pile goes on growing in height according to the number used And they say that the erection is complete,3 when the pile is 180 cubits in circumference, and fifty, or at most sixty, in height; or again when it is a hundred cubits in circumference and a hundred in height,4 if the wood happens to be rich in pitch. Having then thus arranged the pile and having covered it in with timber they throw on earth and completely cover it, so that the fire may not by any means show through; for, if this happens, the pitch is ruined. Then they kindle the pile where the passage is left, and then, having 5 filled that part 6 up too with the timber and piled on earth, they mount a ladder and watch wherever they see the smoke pushing its way out, and keep on piling on the earth, so that the fire may not even shew itself And a conduit is prepared for the pitch right though the pile, so that it may flow into a hole about fifteen cubits off, and the pitch as it flows out is now cold to the touch. The pile burns for nearly two days and nights; for on the second day before sunset it has burnt itself out and the pile has fallen in; for this occurs if the pitch is no longer flowing. All this time 7 they keep watch and do not

go to rest, in case the fire should come through; and they offer sacrifice and keep holiday, praying that the pitch may be abundant and good. Such is the manner in which the people of Macedonia make

pitch by fire.

They say that in Asia in the Syrian region they do not extract the pitch by cutting ¹ out of the tree the wood containing it, but use fire to the tree itself, applying an instrument fashioned on purpose, ² with which they set fire to it ³ And then, when they have melted out the pitch at once place, they shift the instrument to another. But they have a limit and indications when to stop, chiefly of course the fact that the pitch ceases to flow They also, as was said before, ⁴ use fire to get pitch out of the terebinth; for the places where this tree grows do not produce the fir. Such are the facts about resin and pitch.

Of frankincense and myrrh various accounts.

IV. As to frankincense myrrh balsam of Mecca and similar plants it has been said that the gum is produced both by incision and naturally. Now we must endeavour to say what 5 is the natural character of these trees and to mention any peculiarities as to the origin of the gum of its collection or anything 6 else. So too concerning the other fragrant plants; most of these come from places in the south and east.

Now frankincense myrrh cassia and also cinnamon are found in the Arabian peninsula ⁷ about

Saba Hadramyta Kitibaina and Mamalı. The trees of frankincense and myrrh grow partly in the mountains, partly on private estates at the foot of the mountains; wherefore some are under cultivation, others not; the mountains, they say, are lofty, forest-covered and subject to snow, and rivers from them flow down to the plain. The frankincense-tree,1 it is said, is not tall, about five cubits high, and it is much branched; it has a leaf like that of the pear, but much smaller and very grassy in colour, like rue; the bark is altogether smooth like that of bay.

The myrrh-tree 2 is said to be still smaller in stature and more bushy; it is said to have 3 a tough stem, which is contorted near the ground, and is stouter than a man's leg; and to have a smooth bark like that of andrachne. Others who say that they have seen it agree pretty closely about the size; neither of these trees, they say, is large, but that which bears myrrh is the smaller and of lower growth; however they say that, while the frankincense-tree 4 has a leaf like that of bay and smooth bark, that which bears myrih is spinous and not smooth, and has a leaf like that of the elm, except that it is curly and spinous 5 at the tip like that of kermes-oak

⁶ These said that on the coasting voyage which they made from the bay of the Heroes they landed to look for water on the mountains and so saw these trees and the manner of collecting their gums. ⁷They reported that with both trees incisions had

been made both in the stems and in the branches. but that, while the stems looked as if they had been cut with an axe, in the branches the incisions were slighter; also that in some cases the gum was dropping, but that in others it remained sticking to the tree; and that in some places mats woven of palm-leaves were put underneath, while in some the ground underneath was merely made level and clean, and that the frankincense on the mats was clear and transparent, that collected on the ground less so, and that that which remained sticking to the trees they scraped off with iron tools, wherefore sometimes pieces of bark remained in it. whole range, they said, belongs to the portion of the Sabaeans; for it is under their sway, and they are honest in their dealings with one another Wherefore no one keeps watch: so that these sailors greedily took, they said, and put on board their ships some of the frankincense and myrrh, since there was no one about, and sailed away. They also reported another thing which they said they had been told, that the myrrh and frankincense are collected from all parts into the temple of the sun; and that this temple is the most sacred thing which the Sabaeans of that region possess, and it is guarded by certain Arabians in arms. And that when they have brought it, each man piles up his own contribution of frankincense and the myrrh in like manner, and leaves it with those on guard; and on the pile he puts a tablet on which is stated the number of measures which it contains, and the price for which each measure should be sold 1; and that, when the merchants come, they look at the tablets, and whichsoever pile pleases them, they

measure, and put down the price on the spot whence they have taken the wares, and then the priest comes and, having taken the third part of the price for the god, leaves the rest of it where it was, and this remains safe for the owners until they come and claim it.

Others report that the tree which produces the frankincense is like mastich, and its fruit is like the fruit of that tree, but the leaf is reddish: also that the frankincense derived from young trees is whiter and less fragrant, while that derived from those which have passed their prime is yellower and more fragrant; also that the tree which produces myrrh is like the terebinth, but rougher and more thorny; that the leaf is somewhat rounder, and that, if one chews it, it resembles that of the terebinth in taste; also that of myrrh-trees too those that are past their prime give more fragrant myrrh.

¹Both trees, it is said, grow in the same region; the soil is clayey ² and caked, ³ and spring waters are scarce. Now these reports are contradictory to ⁴that which says that the country is subject to snow and rain and sends foith rivers. However others make the statement ⁵ that the tree is like the terebinth; in fact some say that it is the same tree; for that logs of it were brought to Antigonus by the Arabs who brought the frankincense down to the sea, and that these did not differ at all from logs of terebinth.⁶ However these informants were guilty

ENQUIRY INTO PLANTS, IX. IV. 8-10

of a further more important piece of ignorance; for they believed that the frankincense and the myrrh were produced by the same tree. Wherefore the account derived from those who sailed from the city of Heioes is more to be believed; ¹ in fact the frankincense-tree which grows above Sardes in a certain sacred precinct has ² a leaf like that of bay, if we may judge at all by this; and the frankincense derived both from its stem and its branches is like in appearance and in smell, when it is burnt as incense, to other frankincense. This is the only tree which can never be cultivated.³

Some say that the frankincense-tree is more abundant4 in Arabia, but finer in the adjacent islands 5 over which the Arabians bear rule; 6 for there it is said that they mould the gum on the trees to any shape that they please. And perhaps this is not incredible, since it is possible to make any kind of incision that they like. Some of the lumps 7 of gum are very large, so that one is large enough in bulk to fill the hand and in weight is more than a third of a pound All frankincense is gathered in the rough and is like bark in appearance. Myrrh 8 is either 'fluid' (myrrh-oil) or 'solid' (agglutinated). That of better quality is tested by its taste, and of this they select that which is of uniform colour 10 of frankincense and myrrh these are about all the facts that have come to our notice at present

¹ Plm. 12, 85-94

² A similar tale is told of frankingense by Herodotus (3. 107), who has an equally surprising tale about cinnamon (3. 111).

ENQUIRY INTO PLANTS, IX. v. 1-3

Of cinnamon and cassia various accounts.

V. 1 Of cinnamon and cassia the following account is given: both are shrubs, it is said, and not of large size, but of the same size as bushes of chaste-tree. with many branches and woody When they cut down the whole connamon-tree, they divide it into five parts; of these the first is that which grows next the branches and this is the best: this is cut in lengths a span long or a little longer; next comes the second kind, which is cut in shorter lengths; then come the third and the fourth, and last the least valuable wood, which grows next the root; for this has least bark, and it is the bark and not the wood which is serviceable; wherefore the part which grows high up the tree is the best, since it has the most bark. Such is the account given by some.

Others say that cinnamon is shrubby or rather like an under-shrub; and that there are two kinds, one black, the other white. ² And there is also a tale told about it; they say that it grows in deep glens, and that in these there are numerous snakes which have a deadly bite; against these they protect their hands and feet before they go down into the glens, and then, when they have brought up the cinnamon, they divide it in three parts and draw lots for it with the sun; and whatever portion falls to the lot of the sun they leave behind; and they say that, as soon as they leave the spot, they see this take fire. Now

this is sheer fable.

³ Cassia, they say, has stouter branches, which are very fibrous and difficult to strip of the bark ⁴; and it is the bark of this tree also which is serviceable.

When then they cut off the branches, they chop them up into lengths of about two fingers' breadth or rather more, and these they sew up in raw 1 hide; and then from the leather and the decaying wood little worms are engendered, which devour the wood but do not touch the bark, because it is bitter This is all the inand has a pungent odour. formation forthcoming about cinnamon and cassia.

Of balsam of Mecca.

VI. ² Balsam of Mecca grows in the valley of Syria They say that there are only two parks in which it grows, one of about four acres, the other much smaller. The tree is as tall as a good-sized pomegranate and is much branched; it has a leaf like that of rue, but it is pale; and it is evergreen; the fruit is like that of the terebinth in size shape and colour, and this too is very fragrant,3 indeed more so than the gum

⁴ The gum, they say, is collected by making incisions, which is done with bent pieces of iron at the time of the Dog-star, when there is scorching heat, and the incisions are made both in the trunks and in the upper parts of the tree. The collecting goes on throughout the summer; but the quantity which flows is not large; in a day a single man can collect a shell-full 5; the fiagrance is exceeding great and rich, so that that which comes from a small amount is perceived for a wide distance. However it does not reach us in a pure state, what is collected is mixed with other things; for it mixes freely with

VII. 'Ο δὲ κάλαμος γίνεται καὶ ὁ σχοῖνος ὑπερβάλλοντι τὸν Λίβανον μεταξὺ τοῦ τε Λιβάνου καὶ ἄλλου τινὸς ὄρους μικροῦ ἐν τῷ αὐλωνίσκῷ τούτῷ, καὶ οὐχ ὡς τινές φασι τοῦ ᾿Αντιλιβάνου· ὁ γὰρ ᾿Αντιλίβανος μακρὰν ἀπέχει τοῦ Λιβάνου καὶ μεταξὺ τούτων ἐστὶν δν αὐλῶνα καλοῦσι πεδίον πολὺ καὶ καλόν. ὅπου δὲ ὁ κάλαμος καὶ ὁ σχοῖνος φύεται λίμνη μεγάλη τυγχάνει, πρὸς ταύτην δὲ ἐν τῷ ἔλει τῷ ἀνεξηραμμένῷ πεφύκασι·

 $^{^1}$ τov I conj ; $\tau o\tilde{v}$ MSS. G's rendering shews that the explanation of the 'different reason' (i e to strengthen the tree) has dropped out of our texts. 2 $\gamma \lambda \rho$ add. Sch.

ENQUIRY INTO PLANTS, IX. vi. 2-vii. I

other things; and what is known in Hellas is generally mixed with something else. The boughs are also very fragrant. In fact it is on account of these boughs, they say, that the tree is pruned (as well as for a different reason 1), since 2 the boughs cut off can be sold for a good price. In fact the culture of the trees has the same motive 3 as the irrigation (for they are constantly irrigated). And the cutting of the boughs seems likewise to be partly the reason why the trees do not grow tall; for, since they are often cut about, they send out branches instead of putting out all their energy in one direction.

Balsam is said not to grow wild anywhere. From the larger park are obtained twelve vessels containing each about three pints, from the other only two such vessels; the pure gum sells for twice its weight in silver, the mixed sort at a price proportionate to its purity. Balsam then appears to be of exceptional fragrance.

Of other aromatic plants-all oriental, except the iris.

VII. ⁴ Sweet-flag and ginger-grass grow beyond the Libanus between that range and another small range, in the depression thus formed; and not, as some say, between Libanus and Anti-Libanus. For Anti-Libanus is a long way from Libanus, and between them is a wide fair plain called 'The Valley.' But, where the sweet-flag and ginger-grass grow, there is a large lake,⁵ and they grow near it in the dried up marshes, covering an extent

The 'motive' is the production of boughs. ἐν ταὐτῆ αἰτία I conj, ταύτην αἰτίαν UMP₂Ald.; ἐν ταὐτη αἰτία conj. W.

ENQUIRY INTO PLANTS, IX. vii. 1-3

of more than thirty furlongs. They have no fragrance 1 when they are green, but only when they are dried, and in appearance they do not differ 2 from ordinary reeds and rushes; but, as you approach the spot, immediately a sweet smell strikes you. However it is not true, as some say, that the fragrance is wafted to ships approaching 8 the country; for indeed this district is more than 150 furlongs from the sea. However it is said that in Arabia the breezes wafted from the land are fragrant.

Such then are the plants in Syria which have remarkable fragrance. For that of khalbane is more oppressive and somewhat medicinal; ⁴ for this perfume also is produced in Syria from the plant called allheal. As to all the other fragrant plants used for aromatic odours, they come partly from India whence they are sent over sea, and partly from Arabia, for instance, komakon ⁵—as well as cunnamon and cassia. The fruit called komakon is said to be distinct ⁶ from this; the komakon of which we are speaking is a perfume which they mix with the choicest unguents. Cardamom and Nepaul cardamom some say come from Media; others say that these come from India, as well as spikenard and most, if not all, of the other species

Now this is a general list of the plants used for perfumes—cassia cinnamon cardamom spikenard nairon balsam of Mecca aspalathos storax iris narte

 $^{^6}$ εlναι has no government, and W considers the passage corrupt. kostos all-heal saffron-crocus myrrh kypeiron gingergrass sweet-flag sweet marjoram lotos dill. Of these it is the roots, bark, branches, wood, seeds, gum or flowers which in different cases yield the perfume Some of them grow in many places, but the most excellent and most fragrant all come from Asia and sunny regions. From Europe itself comes none of them except the iris.

¹This is best in Illyria, not in the part near the sea, but in that which is further inland and lies more to the north. In different districts it varies in quality, no special attention is needed, except to

scrape the roots clean and dry them.

As for the roots which grow in Thrace, such as one 2 which has a smell like spikenard and certain others, their fragrance is but slight and feeble Let this suffice for an account of sweet-smelling plants.

Of the medicinal juices of plants and the collection of them general account.

VIII Now we must endeavour to speak in like manner of those juices which have not been mentioned already, I mean, such as are medicinal or have other pioperties, and at the same time we must speak of roots; for some of the juices are derived from roots, and apart from that roots have in themselves divers properties of all kinds; and in general we must discuss medicinal things of all kinds, as fruit, extracted juice, leaves, roots, herbs; for the herb-diggers call some medicinal things by this name

 $^{^3}$ χυλισμοῦ $P_2Ald\ H$, καυλοῦ conj. W $\,$ The list is of the aspects in which the herbalist would regard the plant, not of the parts of the plant.

Των δε ριζων πλείους μεν είσιν αι δυνάμεις καί πρὸς πλείω. ζητούνται δὲ μάλιστα αἱ φαρμακώδεις ώς χρησιμώταται, διαφέρουσαι τῶ τε μή πρὸς ταὐτὰ καὶ τῷ μὴ ἐν τοῖς αὐτοῖς ἔχειν τὴν δύναμιν. ώς δ' οὖν ἐπὶ πᾶν αἱ πλεῖσται μὲν ἐν αύταις έχουσι και τοις καρποις και τοις όποις, ένιαι δὲ καὶ ἐν τοῖς φύλλοις τὰς δὲ φυλλώδεις δυνάμεις τὰς πολλὰς σχεδὸν πόας καλοῦσιν, ώσπερ είρηται μικρώ πρότερον, οί διζοτόμοι.

Ο μεν οθν όπισμος γίνεται των όπιζομένων ώς έπὶ τὸ πολὺ τοῦ θέρους, τῶν μὲν ἐνισταμένου τῶν δὲ προεληλυθότος. ή δὲ ῥιζοτομία γίνεταί τινων καὶ ὑπὸ πυροτομίαν καὶ μικρῷ πρότερον, οὐ μὴν άλλ' ή γε πλείων τοῦ μετοπώρου μετ' Αρκτοῦρον, όταν φυλλορροήσωσιν, όσων δὲ καὶ ὁ καρπὸς χρήσιμος, όταν άμερθωσι τὸν καρπόν. ἔστι δὲ ὁ όπισμὸς ἡ ἀπὸ τῶν καυλῶν, ὥσπερ τοῦ τιθυμάλλου καὶ τῆς θριδακίνης καὶ σχεδὸν τῶν πλείστων, η ἀπὸ τῶν ρίζῶν, η τρίτον ἀπὸ της κεφαλης, ὥσπερ της μήκωνος ταύτης γάρ μόνης οὕτω καὶ τοῦτ' ίδιον αύτης. των μèν οὖν καὶ αὐτόματος ὁ όπὸς

² ριζῶν: ρίζα signifies a medicinal plant in general (cf. ριζότομοι) as well as 'root'; the double sense makes translation of this section awkward I print it 'root' where it has

the wider sense.

¹ From this point to 9. 19. 4, γίνεσθαι, the text is repeated in U, with considerable variations, as a tenth book also repeats the first few lines of this passage (down to end of § 1) as a fragment of a tenth book The two Medicean MSS also repeat 9 8. 1, των δε ριζών, down to 9 10 3, Βέλτιστοι δὲ καὶ οἶs, as part of a tenth book. The 'tenth book' readings in each case are distinguished by a *

συνίσταται δακρυώδης τις, ἄσπερ καὶ τῆς τραγακάνθης· ταύτην γὰρ οὐδὲ τέμνειν ἐστί· τῶν δὲ πλείστων ἀπὸ τῆς ἐντομῆς. ὧν ἐνίους μὲν εὐθὺς εἰς ἀγγεῖα συνάγουσιν, ὅσπερ καὶ τὸν τοῦ τιθυμάλλου ἡ μηκωνίου, καλοῦσι γὰρ ἀμφοτέρως, καὶ ἀπλῶς ὅσα πολύοπα τυγχάνει· τῶν δὲ μὴ πολυόπων ἐρίφ λαμβάνουσιν ὥσπερ καὶ τῆς θριδακίνης.

ENQUIRY INTO PLANTS, IX. viii. 2-4

the form of a sort of gum, as with tragacanth; for incision of this plant cannot be made, but in most it is obtained by incision. In some cases the juice is collected straight into vessels, for instance that of tithymallos (spurge) or mehonion (for the plant has both names) and in general the juice of specially juicy plants is so collected. But that of those which do not yield abundant juice is taken with a piece of wool, as also that of wild lettuce.¹

² In some cases there can be no collection of juice, but there is a sort of extraction of it, for instance in the case of plants which are cut down or bruised; they then pour water over them and strain off the fluid, keeping the sediment; but it is plain that in these cases the juice obtained is dry and less copious. In most 'roots' the juice thus extracted is less powerful than that of the fruit, but in hemlock it is stronger and it causes an easier ³ and speedier ⁴ death even when administered in a quite small pill; and it is also more effective for other uses. ⁵That of thapsia is also powerful, while all the rest are less so. Such then is a general account of the various ways of obtaining the juices of plants.

Of the cutting of roots for medicinal purposes, and of certain superstitions connected therewith.

As to cutting of the roots there is no such diversity of practice, except as to the season, which may be summer or autumn, and as to the particular roots selected. ⁶ Thus in hellebore the slender lower roots are taken, for they say that the thick upper part ⁷ which forms a sort of head is useless, and that

ENQUIRY INTO PLANTS, IX. viii. 4-6

it is only given to dogs when it is desired to purge them. And in certain other plants also such differences are mentioned.

Further we may ¹ add statements made by druggists and herb-diggers, which in some cases may be to the point, but in others contain exaggeration. Thus they enjoin that in cutting some roots one should stand to windward,—for instance, in cutting thapsia among others, and that one should first anoint oneself with oil,² for that one's body will swell up if one stands the other way. Also that the fruit of the wild rose must be gathered standing to windward, since otherwise there is danger to the eyes. Also that some roots should be gathered at night, others by day, and some before the sun strikes on them, for instance those of the plant called honeysuckle ³

These and similar remarks may well seem to be not off the point, for the properties of these plants are hurtful, they take hold, it is said, like fire and burn, *for hellebore too soon makes the head heavy, and men cannot go on digging it up for long; wherefore they first eat garlic and take a draught of neat wine therewith. On the other hand the following ideas may be considered far-fetched and irrelevant; for instance they say that the peony, which some call glykyside, should be dug up at night, for, if a man does it in the day-time and is observed by a woodpecker while he is gathering the fruit, he risks the loss of his eyesight, and, if he is cutting the root at the time, he gets prolapsus ani.

ENQUIRY INTO PLANTS, IX. viii. 7-8

It is also said that, while cutting feverwort 1 onemust beware of the buzzard-hawk, if one wishes to come off unhurt; and other reasons for caution 2 are also given. That one should be bidden to pray while cutting is not perhaps unreasonable, but the additions made to this injunction are absurd; for instance as to cutting the kind of all-heal which is called that of Asklepios; 3 for then it is said that one should put in the ground in its place an offering made of all kinds of fruits and a cake; and that, when one is cutting gladwyn,4 one should put in its place to pay for it cakes of meal from spring-sown wheat,5 and that one should cut it with a two-edged sword, first making a circle round it three times,6 and that the piece first cut must be held up in the air while the rest is being cut.

And many similar notions are mentioned. Thus it is said that one should draw three circles round mandrake with a sword, and cut it with one's face towards the west; and at the cutting of the second piece one should dance round the plant and say as many things as possible about the mysteries of love (This seems to be like the direction given about cummin,7 that one should utter curses at the time of sowing) One should also, it is said, draw a circle round the black hellebore and cut it standing towards the east and saying prayers, and one should look out for an eagle both on the right and on the left, for that there is danger to those that cut, if your eagle should come near, that

ENQUIRY INTO PLANTS, IX. vin. 8-ix. 2

they may die ¹ within the year These notions then seem to be irrelevant, as has been said. There are however no methods of root-cutting besides those which we have mentioned.

Of the medicinal uses of divers parts of plants.

IX. As was said,² of some plants the root, fruit and juice are all serviceable, as of all-heal among others; of some the root and the juice, as of scammony³ cyclamen thapsia and others, such as mandrake; for the leaf of this, they say, used with meal, is useful for wounds, and the root for eryspelas, when scraped and steeped in vinegar, and also for gout, for sleeplessness, and for love potions It is administered in wine or vinegar; they cut little balls of it, as of adishes, and making a string of them hang them up in the smoke over must.

⁵ Of hellebore both root and fruit are useful for the same purposes, ⁶—1f it is true, as is said, that the people of Anticyia use the fruit as a purge; this fruit contains the well-known ⁷ drug called sesamodes.

Various parts of all-heal are also useful, and not all for the same purposes; the fruit is used in cases of miscarriage and for disorders of the bladder, while the juice, which is called *khalbane*, is used in cases of miscarriage and also for sprains and such-like troubles; also for the ears, and to strengthen the

voice. The root is used in childbirth, for diseases of women, and for flatulence in beasts of burden. It is also useful in making the iris-perfume because of its fragrance, but the seed is stronger than the root. It grows in Syria and is cut at the time of wheat-harvest.

Of cyclamen the root is used for suppurating 1 boils; also as a pessary for women and, mixed with honey, for dressing wounds; the juice for purgings of the head, 2 for which purpose it is mixed with honey and poured in; it also conduces to drunkenness, if one is given a draught of wine in which it has been steeped. They say also that the root is a good charm for inducing rapid delivery and as a love potion; 3 when they have dug it up, they burn it, and then, having steeped the ashes in wine, make little balls like those made of wine-lees which we use as soap.

⁴ Of 'wild cucumber' (squirting cucumber) the root is used for ⁵ white leprosy and for mange in sheep, while the extracted juice makes the drug called 'the driver.' ⁶ It is collected in autumn, for then it is best.

Of germander the leaves pounded up in olive-oil are used for fractures and wounds and for spreading sores; the fruit purges bile, and is good also for the eyes; for ulcers in the eye they pound up the leaf in olive-oil before applying it. It has leaves like the oak, but its entire growth is only about a palm high; and it is sweet both to smell and taste

Now that all parts are not serviceable for the same purpose is perhaps not strange; it is more

surprising that part of the same 'root' should purge upwards and another part downwards, as is the case with thapsia and islhas—which some call apios (spurge)—and with libanois; for 1 it is not strange that on the other hand the same parts should purge both upwards and downwards, as is the case with 'the driver.'

² Thapsia has a leaf like fennel, but broader, a

stalk like that of ferula, and a white root

³ Ishhas (or apros) has a leaf like rue and short, three or four prostrate stems, and a root like that of asphodel, except that it is composed of scales; ⁴ it loves mountain districts with a gravelly soil. It is collected in spring. Now this account applies only to the above-mentioned plants.

Of hellebores, the white and the black their uses and distribution.

X. ⁵ The white and the black hellebore appear to have nothing in common except the name. But accounts differ as to the appearance of the plants; some say that the two are alike and differ only in colour, the root of the one being white, of the other black; some however say that the leaf of the 'black' is like that of bay, that of the white like that of the leek, but that the roots are alike except for their respective colours. Now those who say that the two plants are alike describe the appearance ⁶ as follows—the stem is like that of asphodel and very short; the leaf has broad divisions, and is extremely like that of ferula, but is long; it is closely attached to the loot and

ENQUIRY INTO PLANTS, IX. x. 1-4

creeps on the ground; the plant has numerous roots, to wit, the slender roots which are serviceable.

Also they say that the black is fatal to horses oxen and pigs, wherefore none of these animals eat it; while the white is eaten by sheep, and from this circumstance the virtue of the plant was first observed, since it purges them; it is at its prime in autumn, and past its prime when spring comes. However the people of Mount Oeta gather it for the meetings 1 of the Amphictyons, for it grows there in greatest abundance and best, though at only one place in the district of Oeta, namely about Pyra.

(The seed of rupture-wort is mixed with the potion given to promote easy vomiting; this plant

is a small herb)

The black kind of hellebore grows everywhere; it is found in Boeotia, in Euboea and in many other places; but best is that from Mount Helicon, which mountain is in general rich in medicinal herbs. The white occurs in few places; the best and that which is most used comes from one of four places, Oeta,2 Pontus, Elea, and Malea.3 They say that that of Elea grows in the vineyards and makes the wine so diuretic that those who drink it become quite emaciated.

But best of all these and better than that found anywhere else is that of Mount Oeta, while that of Parnassus and that of Aetolia (for the plant is common in these parts too and men buy and sell it, not knowing 4 the difference) are tough and ex-

ceeding harsh. These plants then, while resembling the best form in appearance, differ in their virtues.

Some call the black the 'hellebore of Melampus,'1 saying that he first cut and discovered it. Men also purify horses and sheep with it, at the same time chanting an incantation; and they put it to several other uses.

Of the various kinds of all-heal.

XI. There are also several kinds of all-heal tithymallos (spurge) and other herbs. To begin with, one plant called all-heal is the one found in Syria, of which we have recently spoken.2 3 Then come the three other kinds, known as that of Chaeronea, that of Asclepios, and that of Heracles That of Chaeronea has a leaf like monk's rhubarb, but larger and rougher, a golden flower, and a small 4 root; and it specially loves rich ground; they use it for the bites of snakes, spiders, vipers 5 and other reptiles, administering it in wine or anointing the place with it mixed with olive-oil In treating a snake-bite they use a plaster of it, and also give a draught of it mixed with vinegai 6, and they also say that it is good for sores 7 when mixed with wine and olive-oil, and for tumours when mixed with honey

⁸The kind called after Asklepios has a white and very stout root about a span long and a thick bark which is crusted with salt 9; its stem is jointed all the way up, its leaf like that of thapsia, but thicker; it is said that it is good to scrape and drink

it against bites of reptiles, to take it in a posset of honey for disorders of the spleen, when the blood collects about it, and against headache 1 to pound it up in olive-oil and anoint the head; that it is of use also in other obscure troubles, and against stomachache, if scraped and taken in wine It is said also to be able to prevent long periods of sickness Again for running sores 2 one may sprinkle it on in hot wine, first washing the place, while for dry sores one may soak it in wine and apply a plaster.

The kind named after Herakles has a large broad leaf, three spans each way, a root as thick as a man's finger, forking in two or three 4; in taste it is somewhat bitter, in smell like pure frankincense 5; 6 it is good to drink it against epilepsy, mixed with the rennet of a seal in the proportion of one to four. or in sweet wine against pain 7 in the stomach; it may be used dry 8 for running sores, and mixed with honey for dry ones Such are the special features about these plants and their respective virtues

9 There are also other kinds of all-heal, of which one has a fine leaf, the other not; the properties of both kinds are the same; namely they are used as a pessary for women, and a plaster may be made of them mixed with meal for spreading sores as well as for ordinary sores.

Of the various plants called strykhnos.

As to strykhnos again and tithymallos (spurge) there is in either case more than one form of the plant

denoted by the name. ¹Of the plants called strykhnos one induces sleep, the other (thorn-apple) causes madness. The first-mentioned has a root which becomes red like blood as it dries, but when first dug up it is white; its fruit is a deeper orange than saffron,² its leaf like that of tithymallos or the sweet apple; and it is itself rough, and about a foot high.³ The 'bark' of the root of this they bruise severely, and soaking it in neat wine give it as a draught, and it induces sleep. It grows in water-courses and on tombs.

⁴ The kind which produces madness (which some call thryonon⁵ and some pertton⁶) has a white hollow root about a cubit long. Of this three twentieths of an ounce in weight is given, if the patient is to become merely sportive and to think himself a fine fellow; twice this dose⁷ if he is to go mad outright and have delusions⁸; thrice the dose, if he is to be permanently insane; (and then they say that the juice of centaury is mixed with it); four ⁹ times the dose is given, if the man is to be killed. The leaf is like that of rocket, but larger, the stem about a fathom long; the 'head' ¹⁰ is like that of a long onion, but larger and rougher. And it also resembles the fruit of the plane-tree

ENQUIRY INTO PLANTS, IX. xt. 7-9

Of the various kinds of tithymallos.

¹ Of the various plants called *tithymallos* (spurge) that which is called sea-spurge has a round scarlet ² leaf; the stem (and the size of the plant generally) is about a span long, and the fruit is white. It is gathered when the grape is just turning, and the dried fruit is given in a draught, the dose being the twenty-fourth part of a pint.

⁸ That which is called the 'male' has a leaf like the olive, and the height of the whole plant is a cubit. Of this they collect the juice at the time of vintage, and, after preparing it, use it as occasion demands ⁴; and it purges chiefly downwards.

⁵The kind of tithumallos called 'myrtle-like' is white; it has a leaf like the myrtle, but spinous at the tip; it puts out earthward twigs about a span long, and these bear the fruit 6 not all at the same time but in alternate years, so that from the same root grow faults partly this and partly next year It loves hill-country. The fruit of it is called a 'nut.' They gather it when the barley is ripening and dry and clean it; (it is the actual fruit? which they clean); they wash it in water and, after drying it again, give it in a draught, mixing with it two parts of 'black 8 poppy'; and the whole dose amounts to about an eighth of a pint. It purges phlegm downwards. If they administer the 'nut' itself, they first pound it up in sweet wine, or give it in parched sesame to bite up These plants then have leaves juices or fruits which are serviceable.

⁵ Diose 4, 164; Plin. 26 66 6 cf. CP. 4 6, 9.

⁷ W. adds δè after αὐτὸν The treatment of the leaves has perhaps dropped out cf Plin l c (4's version is even shorter.
8 μέλαινα must here mean 'dark,' i e. red. See Index.

10 Τῶν δὲ λιβανωτίδων, δύο γάρ εἰσιν, ἡ μὲν ἄκαρπος ἡ δὲ κάρπιμος, ἡ μὲν καὶ τῷ καρπῷ καὶ τῷ φύλλῳ χρησίμη ἡ δὲ μόνον τἢ ῥίζη. καλεῖται δὲ ὁ καρπὸς κάχρυ. ἔχει δὲ αὕτη τὸ μὲν φύλλον ἐοικὸς σελίνῳ ἔλείῳ μεῖζον δὲ πολύ, καυλὸν δὲ μέγεθος πήχεως ἡ μείζω, ῥίζαν δὲ μεγάλην καὶ παχεῖαν λευκὴν ὄζουσαν ὥσπερ λιβανωτοῦ, καρπὸν δὲ λευκὸν τραχὺν προμήκη· φύεται δὲ μάλιστα ὅπου ἄν αὐχμηρὰ χωρία ἢ καὶ πετρώδη· χρησίμη δὲ ἡ μὲν ῥίζα πρός τε τὰ ἔλκη καὶ πρὸς τὰ γυναικεῖα πινομένη ἐν οἴνῳ αὐστηρῷ μέλανι· ὁ δὲ καρπὸς πρός τε τὰς στραγγουρίας καὶ πρὸς τὰ ὧτα καὶ ἄργεμα καὶ πρὸς ὀφθαλμίας καὶ ὥστε γάλα γυναιξὶν ἐμποιεῖν.

Of the two herbs called libanotis

¹ Of the plants called *libanotis*, (for there are two) one is barren, the other fruitful, the latter having both fruit and leaves that are serviceable, the former only a serviceable root. The fruit is called *kakhry*.² This plant has a leaf like maish celery, but much larger, a stem a cubit long or more, a large stout white root, which smells like frankincense, and a white rough elongated fruit. It grows chiefly wherever there is parched and rocky soil; the root is serviceable for sores, and for diseases of women when given in a draught of dry black wine. The fruit is good for strangury, for the ears, for ulcers ³ on the eye, for ophthalmia and for producing milk in women

The barren kind has a leaf like that of the bitter lettuce, but rougher and paler; the root is short. It grows where there is abundance of heather.⁴ The root can purge both upwards and downwards, the upper part being used for the former, that nearer the ground for the latter purpose. Also, if it is put among clothes, it prevents moth. It is gathered at

the time of wheat-harvest

Of the two kinds of chamaeleon.

XII. ⁵Of chamaeleon there is the white kind and the dark, the properties of the roots are different, and the roots also differ ⁶ in appearance. In the one case the root is white stout and sweet, and it has a heavy smell; they say that when cooked it is serviceable against flux; it is chopped up like

radishes 1 and the pieces strung on a rush; it is also good against the broad maw-worm; the patient first eats a bunch of raisins and then drinks about an eighth of a pint of this scraped up in a draught of dry wine It is fatal to dogs and pigs; to kill a dog it is well mixed up in a meal paste with oil and water. to kill a pig it is mixed with 'mountain cabbage' (spurge).2 It is given to a woman in sweet winelees or sweet wine. And if one wishes to discover whether a man that is sick will recover, they say that he should be washed with this for three days, and, if he survives the experience, he will recover. It grows everywhere alike and has a leaf like the golden thistle, but larger; the plant itself has a large thistle-like 3 head 4 close to the ground; some actually 5 call it the thistle.

⁶ The dark kind resembles the other in leaf, which is like that of the golden thistle but smaller and smoother; the plant itself is in general appearance like a sunshade; the root is stout and black, and when broken is yellowish. It likes cold uncultivated soil: it has the property of expelling leprosy; for this it is given pounded up in vinegar, or else scrapings of it are made into a plaster; and it is also used for the white leprosy.

like that of the black mullein, but it is not so black; the stem grows about a cubit high, the root is stout and shallow, the fruit is twisted like a little horn¹: it is gathered at the time of wheat harvest. It has the property of purging the belly, and the leaf is used for removing ulcers on sheep's eyes. It grows by the sea, wherever there is rocky ground.

² Another kind of poppy is that called *hoias*, which is like wild chicory, wherefore it is even eaten, it grows in cultivated fields and especially among barley. It has a red flower, and a head as large as a man's finger-nail. It is gathered before the barley-harvest, when it is still somewhat green.

It purges downwards.

⁵ Another kind of poppy is called *Herakleia*: it has a leaf like soap-wort, with which ⁴ they bleach linen: the root is slender and does not run deep, and the fruit is white The root of this plant purges upwards: and some use it in a posset of mead for epileptics.

⁵ These kinds then are distinct plants, though they

come under one name.

Of roots possessing remarkable taste or smell.

XIII. The differences between roots are shown in their tastes ⁶ and in their smells: some are pungent, some bitter, some sweet: some again have a pleasant, others a disagreeable smell. The plant called yellow water-lily ⁷ is sweet. it grows in lakes and marshy places, as in the district of Orchomenus, at

² γλυκείαν γλυκύρριζαν conj. Dalec , whence 'liquorice.' cf. Plin. 11. 284

^{*} cf. Plin. l c., who took iππακή to be a plant.

ENQUIRY INTO PLANTS, IX. XIII. 1-3

Marathon and in parts of Crete: the Boeotians, who eat the fruit, call it madonais. It has a large leaf which lies on the water: and it is said that it acts as a styptic if it is pounded up and put on the wound it is also serviceable in the form of a draught for dysentery

i 'Scythian root' (liquorice) is also sweet; some indeed call it simply 'sweet-root.' It is found about Lake Maeotis: it is useful against asthma or a dry cough and in general for troubles in the chest: also, administered in honey, for wounds: also it has the property of quenching thirst, if one holds it in the mouth: wherefore they say that the Scythians, with the help of this and mares' milk cheese 3 can go

eleven or twelve days without drinking

⁴[Birthwort is fragiant to the smell but in taste is very bitter: in colour it is black. The best grows on the mountains: it has a leaf like alsine, but rounder: it is useful for many purposes, and is best for sores on the head ⁵ and other sores, also for bites of reptiles, for inducing sleep and for disorders of the womb ⁶. It is directed that it should be applied as a plaster, steeped in water, and for the other purposes should be given shredded into honey and olive-oil: for snake-bites it should be taken in sour wine and also used as a plaster on the bite: to induce sleep it should be scraped up ⁷ and administered in black dry wine, in cases of prolapsus uteria lotion of it mixed with water should be applied.]

¹These then are sweet: other roots are bitter, and some unpleasant to the taste. Of those that are sweet ² there are some that cause mental derangement, as the plant like the golden thistle which grows near Tegea · of this Pandeios the sculptor ate, and went mad while he was working in the temple. Others have fatal effects, as that ³ which grows near the mines in the fields of ⁴ Thrace: this however is inoffensive and quite sweet to the taste, and the death which it causes is easy and like falling asleep. There are also differences in colour, not merely as to being black or white or yellow, but some are quite wine-coloured and some are red, as the root of madder.

⁵ The root of pentaphyllon or pentapetes (cinquefoil) ⁶ (for the plant bears both names) is red when it is dug up, but as it dries it becomes black and square: its leaf is like a vine-leaf, and it is small and like it in colour: it grows and fades along with the vine. It only has five leaves in all, whence its name: it sends out long slender stems on the ground, and it has

joints.7

⁸ Madder has a leaf like 1vy, but it is rounder: it grows along the ground like dog's-tooth grass and loves shady spots. It has diuretic properties, wherefore it is used for pains in the loins or hip-disease

Some roots are of peculiar shape, as that of the plant called 'scorpion-plant' (leopard's bane) of and that of polypody. For the former is like a scorpion

and is also useful ¹ against the sting of that creature and for certain other purposes. ² The root of polypody is rough and has suckers like the tentacles of the polyp. It purges downwards: and, if one wears it as an amulet, they say that one ³ does not get a polypus. It has a leaf like the great fern, and it grows on rocks.

Of the time for which roots can be kept without losing their mrtue

XIV 4 Some roots keep a longer, some a shorter time Hellebore retains its usefulness for as much as thirty years, birthwort five or six, the black chamaeleon for forty, feverwort 5 (whose root is thick and compact) for ten or twelve. Sulphur-wort keeps five or six years, the root of the 'wild vine' 6 (bryony) for a year, if it be kept in the shade and not damaged . 7 otherwise it 10ts and becomes spongy.8 Others keep for various periods But, to speak generally, of all plants used as drugs the 'driver' keeps longest, and, the older it is, the better it is At least a certain physician, who was no boaster nor liar, said that he had some which was 200 years old and of marvellous virtue, and that it was a present to him from some one. The cause of its keeping so long is its moisture. 10 for to secure this, as soon as they have cut it, they put it among ashes without drying it, and not even so does it become dry, but up to fifty years it will put the lamp 11 out if it is brought near it And they say that alone of all

ENQUIRY INTO PLANTS, IX. xiv. 2-xv. 1

drugs, or to a greater degree than any, it effects a thorough purge upwards: this then is a virtue peculiar to it.

Those roots which contain any sweetness become worm-eaten in course of time, but those that are pungent are not so affected, though their virtues diminish as they become flabby and waste away. No creature coming from without 2 touches a pungent root, but the sphondyle 3 attacks them all;

this then is a peculiarity of this creature

⁴Any root, they say, deteriorates if one lets the fruit grow to maturity and ripen: and so in like manner does the fruit, if you drain the root of its juice: and in general roots with medicinal properties do not have the juice of their roots taken, and only those whose seeds are medicinal are thus treated. But some say that they use the roots for choice, because the fruit is too powerful for the human body to be able to bear it. However this does not appear to be true as a universal rule, seeing that the people of Anticyra administer ⁵ doses of the drug ⁶ sesamodes made from hellebore, which is so called because its fruit is like sesame.

Of the localities which specially produce medicinal herbs

XV The places outside Hellas which specially produce medicinal herbs seem to be the parts of Tyrrhenia and Latium (where they say that Circe dwelt), and still more parts of Egypt, as Homer says:

 5 i.e and it is in this case the fruit which is used. The drug in question, as well as the plant, was called $\sigma\eta\sigma\alpha\mu o\epsilon i\delta\acute{e}s$ or $\sigma\eta\sigma\alpha\mu o\epsilon i\delta\acute{e}s$, cf. 9 9.2 n; Diosc. 4 149

 $^{\circ}$ Or (if $\epsilon \lambda \lambda \epsilon \beta \delta \rho \rho \nu$ is sound) of the sesame-like hellebore, i.e. he 'black' $\delta \tau \iota$. $\sigma \eta \sigma \alpha \mu \omega$ I have bracketed, as a gloss on $\sigma \eta \sigma \alpha \mu \omega \delta \delta \nu \nu$ $\epsilon \lambda \lambda \epsilon \beta \delta \rho \rho \nu$ is probably also a gloss.

φησι, τὰ περὶ Αἴγυπτον ἐκείθεν γὰρ τὴν Ἑλένην φησὶ λαβείν "ἐσθλὰ τά οἱ Πολύδαμνα πόρεν Θῶνος παράκοιτις Αἰγυπτίη τόθι πλείστα φύει ζείδωρος ἄρουρα φάρμακα, πολλὰ μὲν ἐσθλὰ τετυγμένα πολλὰ δὲ λυγρά." ὧν δὴ καὶ τὸ νηπενθὲς ἐκεῖνό φησιν εἶναι καὶ ἄχολον, ὥστε λήθην ποιεῖν καὶ ἀπάθειαν τῶν κακῶν. καὶ σχεδὸν αὖται μὲν ἐοίκασιν ὥσπερ ὑπὸ τῶν ποιητῶν ὑποδεδεῖχθαι. καὶ γὰρ Αἰσχύλος ἐν ταῖς ἐλεγείαις ὡς πολυφάρμακον λέγει τὴν Τυρρηνίαν.

of blood, some say if the vein is merely pricked, others even if it is deeply cut into. These then of the places outside Hellas are those that are most

productive of drugs.

² Of places in Hellas those most productive of drugs are Pelion in Thessaly, Telethrion in Euboea, Parnassus, and also Arcadia and Laconia, for both these states produce medicinal herbs, wherefore the Arcadians are accustomed, instead of drinking medicine, to drink milk in spring when the juices of such plants are at their best, for then the milk has most medicinal virtue—It is cows' milk that they drink, since it appears that the cow eats more than any other animal and is more impartial as to what she eats

³ Both kinds of hellebore, the white and the black, grow in their country, and also carrot, ⁴ a saffroncoloured plant like bay, and a plant which the Arcadians call 'wild cabbage' ⁵ (spurge) but some physicians kerais; also a plant called by some marsh mallow, ⁶ also birthwort hartwort alexanders sulphurwort Herakleia, and both kinds of strykhnos, ⁷ that which has a scarlet and that which has a black fruit

There also grow there the 'wild cucumber' (squirting cucumber), of which the drug 'driver's is compounded, and the tithymallos (spurge) of which hippophaes is made, this is best about Tegea, and that kind is much sought after, it grows there in

considerable abundance, but in greatest abundance and best about Kleitoria

¹ All-heal grows in great abundance and best in ² the rocky ground about Psophis, moly about Pheneos and on Mount Kyllene. They say that this plant is like the moly mentioned by Homer, that it has a round root like an onion and a leaf like squill, and that it is used against spells and magic arts, but that

it is not, as Homer says, difficult to dig up

³ Hemlock is best about Susa ⁴ and in the coldest spots. Most of these plants occur also in Laconia, for this too is a land rich in medicinal herbs. In Achaia tragacanth ⁵ is abundant and is as good as that of Crete, it is believed, and even fairer in appearance. Daukon ⁵ again is excellent in the country about Patrai ⁷; this is by nature healing, and it has a black root. Most of these grow also on Mount Parnassus and about Telethrion. So these plants are common to several lands.

Of the medicinal herbs peculiar to Crete.

XVI. ⁸But dittany is peculiar to Crete. This plant is marvellous in virtue and is useful for many purposes, but especially for women in child-birth. Its leaf is like pennyroyal, to which it also bears some resemblance in taste, but the twigs are slenderer. They use the leaves, not the twigs nor the fruit: and the leaf is useful for many other purposes, but above all,

Hellas. But Plm. 25 154 has Susa it can hardly be the Persian town

as was said, against difficult labour in women; for it is said that either it makes labour quite easy or at least it confessedly makes the pains to cease: it is given as a draught in water. It is a scarce plant: for the region which bears it is not extensive, and the goats graze it down because they are fond of it. The story of the arrows is also said to be true,—that, if goats eat it when they have been shot, it rids them 1 of the arrow. Such then is dittany and

such its properties.

2' False dittany' is like it in leaf, but has smaller twigs, and in virtue is far inferior. For it is of service in the same ways, but is feebler and not nearly so powerful. The virtue of dittany is perceived directly it is taken into the mouth: for a small piece of it has a very warming effect. The bunches of it are put in the hollow stem of ferula 3 or a reed, so that it may not exhale its virtue: for, if it does so, it is less effective. Some say that dittany and 'false dittany' are essentially the same plant, but that the latter is an inferior form produced by growing in places with richer soil; just as 'many other things 4 become inferior in their properties for the same cause. For dittany loves rough ground.

⁵ There is also another plant called 'dittany,' though it has nothing in common with these except the name. This has neither the same appearance nor the same virtue; for its leaf is like beigamot-mint and its twigs are larger, and further its use and virtue are differently shewn. The true plant is, as was said, marvellous, and is also peculiar to the island of Crete. Indeed some say that the plants

of Crete are superior in leaves boughs ¹ and in general all the parts above ground to those of other places; while those of Parnassus are superior to most of those found elsewhere.

Of wolf's-bane and its habitat, and of meadow-safiron

² Wolf's-bane grows in Crete and in Zakynthos, but is most abundant and best at Herakleia in Pontus. It has a leaf like chicory, a root like in shape and colour to a prawn,3 and in this root resides its deadly property, whereas they say that the leaf and the fruit produce no effects. The fruit is that of a herb,4 not that of a shrub or tree It is a lowgrowing herb and shows no special feature, but is like corn, except that the seed is not in an ear It grows everywhere and not only at Akonai,5 from whence it gets its name (this is a village of the Mariandynoi)6: and it specially likes rocky ground. Neither sheep nor any other animals eat it 7 In order to be effective it is said that it must be compounded in a certain manner, and that not everyone can do this: and so that physicians, not knowing how to compound it, use it as a septic and for other purposes: and 8 that, if drunk mixed in wine or a honey-posset, it produces no sensation: but that it can be so compounded as to prove fatal at a certain moment which may be in two three or six months, or in a year, or even in two years and that the

longer the time the more painful the death, since the body then wastes away, while, if it acts at once, death is quite painless. And it is said that no antidote 1 which can counteract it has been discovered, like the natural antidotes to other 2 poisonous herbs of which we are told: though the country-folk 3 can sometimes save a man with honey and wine and such like things, only however occasionally and with difficulty

(On the other hand they say that for meadow-saffron the antidote has been found for that there is another root which counteracts that herb: and that it has a leaf like hellebore or the madonna lily: and that this is generally known. Wherefore they say that slaves often take meadow-saffron when greatly provoked, and then themselves have recourse to the antidote and effect a cure,—seeing that the poison does not cause a speedy and easy death, but the one that is lingering and slow,—unless indeed, merely because the cure is so easy, the antidote has not been properly prepared. At least they say that though death may ensue at once, sometimes it only occurs after a considerable interval, which in some cases extends to a year, and that in these latter cases the dose given has incurable effects and that

ENQUIRY INTO PLANTS, IX. xvi. 6-8

these facts have been most carefully ascertained among the Tyrrhenians of Herakleia. Now 1 it is not surprising that in some circumstances the effects of the poison should be incurable, and yet in others that a cure should be possible, this being also the case

with other deadly poisons)

To return—wolf's bane, as has been said, is useless to those who do not understand it; in fact it is said that it is not lawful even to have it in one's possession, under pain of death, also that the length of time which it takes to produce its effects depends on 2 the time when it is gathered; for that the time which it takes to kill is equal to that which has elapsed since it was gathered.

Of two famous druggists and of the virtues of hemlock.

Thrasyas of Mantineia had discovered, as he said, a poison which produces an easy and painless end, he used the juices of hemlock poppy and other such herbs, so compounded as to make a dose of conveniently small size, weighing only somewhat less than a quarter of an ounce. For the effects of this compound there is absolutely no cure, and it will keep any length of time without losing its virtue at all. He used to gather his hemlock, not just anywhere, but at Susa or some other cold and shady spot; and so too with the other ingredients, he also used to compound many other poisons, using many ingredients. His pupil Alexias was also clever and no less skilful than his master, being also versed in the science of medicine generally

³ Σούσων MSS.; Λούσων conj. Sch. cf. 9 15 8 n The mention of Mantineia makes it likely that a place in Arcadia is intended

Ταῦτα μὲν οὖν εὐρῆσθαι δοκεῖ πολλῷ μᾶλλον νῦν ἡ πρότερον. ὅτι δὲ διαφέρει τὸ χρῆσθαί πως ἑκάστῷ φανερὸν ἐκ πολλῶν· ἐπεὶ καὶ Κεῖοι τῷ κωνείῷ πρότερον οὐχ οὕτω ἀλλὰ τρίβοντες ἐχρῶντο, καθάπερ οἱ ἄλλοι· νῦν δ' οὐδ' ἄν εἶς τρίψειεν, ἀλλὰ περιπτίσαντες καὶ ἀφελόντες τὸ κέλυφος, τοῦτο γὰρ τὸ τὴν δυσχέρειαν παρέχον δυσκατέργαστον ὄν, μετὰ ταῦτα κόπτουσιν ἐν τῷ ὅλμῷ καὶ διαττήσαντες λεπτὰ ἐπιπάττοντες ἐφ' ὕδωρ πίνουσιν, ὥστε ταχεῖαν καὶ ἐλαφρὰν γίνεσθαι τὴν ἀπαλλαγήν.

XVII. 'Απάντων δὲ τῶν φαρμάκων αἱ δυνάμεις ἀσθενέστεραι τοῖς συνειθισμένοις τοῖς δὲ καὶ ἀνενεργεῖς τὸ ὅλον. ἔνιοι γὰρ ἔλλέβορον ἐσθίοντες πολὺν ὥστε ἀναλίσκειν δέσμας ὅλας οὐδὲν πάσχουσιν· ὅπερ ἐποίει καὶ Θρασύας δεινότατος ῶν ὡς ἐδόκει περὶ τὰς ῥίζας. ποιοῦσι δὲ τοῦθ' ὡς ἔοικε καὶ τῶν νομέων τινές· δι' ὁ καὶ πρὸς τὸν φαρμακοπώλην τὸν θαυμαζόμενον ὡς κατήσθιε ῥίζαν μίαν ἡ δύο παραγενόμενος ὁ ποιμὴν καὶ ἀναλώσας ὅλην τὴν δέσμην ἐποίησεν ἀδόκιμον· ἐλέγετο δ' ὅτι καθ' ἐκάστην ἡμέραν τοῦτο ποιεῖ καὶ αὐτὸς καὶ ἔτεροι.

ENQUIRY INTO PLANTS, IX. XVI. 9-XVII. 2

Now these things seem to have been ascertained far better in recent than in former times. And many things go to shew that the method of using the various drugs makes a difference; thus the people of Ceos formerly did not use hemlock in the way described, but just shredded it up for use, as did other people; but now not one of them would think of shredding it, but they first strip off the outside and take off the husk, since this is what causes the difficulty, as it is not easily assimilated ¹; then they bruise it in the mortar, and, after putting it through a fine sieve, ² sprinkle it on water and so drink it; and then death is made swift and easy.

How use diminishes the efficary of drugs, and how they have not the same effect on all constitutions

XVII ³The virtues of all drugs become weaker to those who are accustomed to them, and in some cases become entirely ineffective. Thus some eat enough hellebore to consume whole bundles and yet suffer no hurt; this is what Thrasyas did, who, as it appeared, was very cunning in the use of herbs And it appears that shepherds sometimes do the like; wherefore the shepherd who came before the vendor of drugs (at whom men marvelled because he ate one or two roots) and himself consumed the whole bundle, destroyed the vendor's reputation: it was said that both this man and others did this every day

For it seems that some poisons become poisonous because they are unfamiliar, or perhaps it is a more accurate way of putting it to say that familiarity makes

⁸ Plin 27 144.

ENQUIRY INTO PLANTS, IX. xvii. 2-4

poisons non-poisonous; for, when the constitution has accepted them and prevails over them, they cease to be poisons, as Thrasyas also remarked; for he said that the same thing was a poison to one and not to another; thus he distinguished between different constitutions, as he thought was right; and he was clever at observing the differences. Also, besides the constitution, it is plain that use has something to do with it. At least Eudemus, the vendor of drugs, who had a high reputation in his business, after making a wager that he would experience no effect before sunset, drank a quite moderate dose, and it proved too strong for his power of resistance · 1 while the Chian Eudemus took a draught of hellebore and was not purged. And on one occasion he said that in a single day he took two and twenty draughts in the market-place as he sat at his stall, and did not leave the place till it was evening, and then he went home and had a bath and dined, and was not sick However this man was able to hold out because he had provided himself with an antidote; for he said that after the seventh dose he took a draught of tart vinegar with pumice-stone dust in it, and later on took a draught of the same in wine in like manner; and that the virtue of the pumice-stone dust is so great that, if one puts it into a boiling pot of wine,2 it causes it to cease to boil, not merely for the moment, but altogether, clearly because it has a drying effect and it catches the vapour and passes it off It was then by this antidote that Eudemus was able to contain himself in spite of the large quantity of hellebore which he took.

However many things go to show that use makes

much difference, ¹ thus some say that the sheep of some places do not eat wormwood; yet those of Pontus not only eat it but become fatter and fairer and, as some say, have no bile But these things may be said to belong to a different enquiry.

Of plants that possess properties affecting lifeless objects

XVIII. Herbs and shrubs,² as has been said, have many virtues which are shown in their effects not only on living bodies but on lifeless ones. Thus they say that there is a kind of ahantha (gum arabic) which thickens water, when it is put in it, ³ and that so also does the root of marsh-mallow if one shreds it and puts it in and stands the water in the open air. Marsh-mallow has a leaf like mallow, but larger and rougher; the stems are soft, the flower yellow, the fruit like that of mallow, the 100t fibrous and white, with a taste like that of the stem of mallow They use it for fractures and for coughs in sweet wine, and for sores in olive-oil

⁴ They say that there is another kind which, if cooked with meat, combines with it and as it were sets it hard; and there are others that attract things to them, like the magnet or amber — So much for

effects produced on lifeless things.

Of plants whose properties affect animals other than man.

⁵ Wolf's bane, which some call 'scorpion-plant because it has a root like a scorpion, kills that animal

if it is shredded over him; while if one then sprinkles him with white hellebore, they say that he comes to life again It is also fatal to oxen sheep beasts of burden and in general to any fourfooted animal, and kills them the same day if the root or leaf is put on the genitals; and it is also useful as a draught against a scorpion's sting. It has a leaf like cyclamen, and a root, as was said, like a scorpion 1 It grows like dog's-tooth grass, and is jointed, and it loves shady places. Now if what has been told already about the scorpion be true, then other similar tales are not incredible (Indeed fabulous tales are not composed without some reason).2 And in relation to our own persons, apart from their effects in regard to health disease and death, it is said that herbs have also other properties affecting not only the bodily but also the mental powers. . . .

Of plants possessing properties which affect the mental powers

XIX. As to those which affect the mind, strykhnos, as was said before,³ is said to upset the mental powers and make one mad, ⁴ while the root of onotheras (oleander) administered in wine makes the temper gentler and more cheerful. This plant has a leaf like the almond, but smaller,⁵ and the flower is red like a rose. The plant itself (which loves hilly country) forms a large bush; the root is red and large, and, if this is dried, it gives off a fragrance like wine. And this does not seem surprising, since there is a sort of 'bouquet' given off by a thing which has the peculiar quality of wine.

4 Diose 4 117; Plin 26, 111.

² τριπόλιον ÚMU*Ald, G from Plin. 21 44 has polium. It may be observed that τριπόλιον can hardly have occurred in a hexameter. Hesych, however, gives τρισπόλιον as the name

ENQUIRY INTO PLANTS, IX. xix. 2-4

Of plants said to have magical properties.

On the other hand what is said of amulets and charms in general for the body or the house is somewhat foolish and incredible. Thus they say that tripolion 2 according to Hesiod and Musaeus is useful for every good purpose, wherefore they dig it up by night, camping on the spot. So too what is said of good or fair fame as affected by plants is quite as foolish or more so: for they say that the plant called snapdragon 3 produces fair fame This plant is like bedstraw but it has no root; and the fruit has what resembles a calf's nostrils. The man who anoints himself with this they say wins fair fame. 4 And they say that the same result follows, if he crowns himself with the flower of gold-flower, sprinkling it with unguent from a vessel of unfired gold. The flower of gold-flower is like gold, the leaf is white The stem also is white 5 and haid, the root is slender and does not run deep 6 Men use it in wine against the bites of serpents, and to make a plaster for burns after burning it and mixing the ashes with honey. tales then, as was said before, proceed from men who desire to glorify their own crafts

A moblem as to cause and effect

Now since the natural qualities of roots fruits and juices have many virtues of all sorts, some having the same virtue and causing the same result, while of a plant. Plin lc seems to combine Diosc.'s account of

πόλιον (3 110) with his account of τριπόλιον (4. 132). 3 τὸ ἀντίρρινον conj St from Diosc 4 130; Plin 25. 129;

others have opposite virtues, one might raise a question which is perhaps equally perplexing in regard to other matters, to wit, whether those that produce the same effect do so in virtue of some single virtue which is common to them all, or whether the same result may not come about also from 1 different causes.-Let us be content to put the question thus: but now we must proceed to speak of the natural qualities or virtues of any other plants that we can mention.

Of certain plants, not yet mentioned, which possess special properties

XX. ² Pepper is a fruit, and there are two kinds: one is round like bitter vetch, having a case and flesh like the berries of bay, and it is reddish: the other is elongated and black and has seeds like those of poppy: and this kind is much stronger than the other. Both however are heating: wherefore these, as well as frankincense, are used as antidotes for poisoning by hemlock

³ The 'Cnidian berry' is round, red in colour, larger than that of pepper, and far stronger in its heating power; wherefore, when it is given as a pill 4 (for it is given to open the bowels) they knead it up in a piece of bread or dough: otherwise it burns the

throat.

⁵ The root ⁶ of sulphur-wort is also heating, wherefore they make of it an ointment to produce a sweat, as with other things so used This root by also

ENQUIRY INTO PLANTS, IX. xx. 5-6

north and are dry: wherefore of those which grow in Euboea best, they say, are the drugs of Aigai or Telethrion, these places being dry, while Telethrion is also shady.

¹Thus we have spoken of drugs, those that are medicinal and those that have virtues of whatsoever kind, whether in the root itself, or in the juice, or in any other of their parts, and in general of all the shrubby or herbaceous plants which have such virtues, as well as their tastes, whether they be fragrant or without fragrance, with the differences between them, which are equally part of their essential character.

¹ This section begins a tenth book in UMAld.H.G, cf. 9 8 1 n The concluding words can hardly represent the original text.

MINOR WORKS

INTRODUCTION TO THE TREATISES CONCERNING ODOURS AND CONCERNING WEATHER SIGNS

THE text of the two opuscula given here is reprinted from that of Wimmer in the Teubner series, 1862, and in the Didot edition, 1866; the latter is very carelessly printed a few slight alterations are mentioned in the notes. Both works are included in the Aldine edition (1497), and in that of Camotius (see p. x). For the de odoribus two MSS, Cod. Vaticanus (A) and Cod Parisiensis (Q) were collated by Brandis. The text of the de signis is considered by Wimmer to be very corrupt and defective: he has admitted some emendations made by Schneider from an old Latin translation published at Bologna in 1516. Schneider's commentary makes frequent reference to an edition of the opuscula of Theophrastus by Turnebus and Daniel Furlanus, printed at Hanau in Prussia in 1605, and reprinted there in 1615.

The de signus was one of Aratus' authorities for his Diosemeia: I have only however made reference to that work where it appears to throw light on the text of Theophrastus These and most other references for the two fragments I owe chiefly to Schneider.

ΠΕΡΙ ΟΣΜΩΝ

I. Αἱ ὀσμαὶ τὸ μὲν ὅλον ἐκ μίξεώς εἰσι καθάπερ οἱ χυμοί τὸ γὰρ ἄμικτον ἄπαν ἄοδμον ὅσπερ ἄχυμον, διὸ καὶ τὰ ἀπλᾶ ἄοδμα, οἶον ὕδωρ ἀὴρ πῦρ ἡ δὲ γῆ μάλιστ' ἢ μόνη ὀδμὴν ἔχει διὸ μάλιστα μικτή.

Τῶν δ' ὀδμῶν αἱ μὲν ὅσπερ ἀειδεῖς καὶ ὑδαρεῖς καθάπερ ἐπὶ τῶν χυμῶν, αἱ δ' ἔχουσαὶ τινας ἰδέας. αἱ δ' ἰδέαι δοκοῦσι μὲν ἀκολουθεῖν ταῖς τῶν χυμῶν, οὐ μὴν ἔχουσί γε πᾶσαι τὰς αὐτὰς προσηγορίας, ὅσπερ ἐν τοῖς πρότερον εἴπομεν, οὐδ' ὅλως οὕτω διωρισμέναι τοῖς εἴδεσιν ὅσπερ οἱ χυμοὶ ἀλλ' ὡς ἄν τοῖς γένεσιν, ὅτι τὰ μὲν εὕοσμα τὰ δὲ κάκοσμα. τῆς δ' εὐωδίας καὶ κακωδίας οὐκέτι τὰ εἴδη κατωνόμασται καίπερ ἔχοντα διαφορὰς μεγάλας ἐπί γ' αὐτῶν τῶν γλυκέων καὶ πικρῶν, ἀλλὰ δριμεῖα λέγεται καὶ ἰσχυρὰ καὶ μαλακὴ καὶ γλυκεῖα καὶ βαρεῖα ὀδμή· κοιναὶ δ' ἔνιαι τούτων καὶ τῶν κακωδῶν.

¹ i.e. there is not one set of terms applied to the varieties of 'good' and another distinct set applied to the varieties of 'evil' odours, but we get a cross-division, some terms (such as 'strong') being applied to varieties of both classes. cf. 64-66.

CONCERNING ODOURS

Introductory Of odours in general and the classification of

I. Opours in general, like tastes, are due to mixture for anything which is uncompounded has no smell, just as it has no taste: wherefore simple substances have no smell, such as water air and fire; on the other hand earth is the only elementary substance which has a smell, or at least it has one to a greater extent than the others, because it is of a more composite character than they.

Of odours some are, as it were, indistinct and insipid, as is the case with tastes, while some have a distinct character And these characters appear to correspond to those of tastes, yet they have not in all cases the same names, as we said in a former treatise; nor in general are they marked off from one another by such specific differences as are tastes: rather the differences are, one may say, in generic character, some things having a good, some an evil odour 1 But the various kinds of good or evil odour, although they exhibit considerable differences, have not received further distinguishing names, marking off one particular kind of sweetness or of bitterness from another: we speak of an odour as pungent, powerful, faint, sweet, or heavy, though some of these descriptions apply to evil-smelling things as well as to those which have a good odour.

'Η δὲ καθόλου καὶ ὥσπερ ἐπὶ πᾶσι τοῖς διαφθειρομένοις σαπρότης. ἄπαν γὰρ τὸ σηπόμενον κακώδες, εί μή τις την όξύτητα λέγει τοῦ οἴνου 8 σαπρότητα τῆ ὁμοιότητι τῆς φθορᾶς. ἐν ἅπασι δ' έστὶν ή τοῦ σαπροῦ κακωδία καὶ ἐν φυτοῖς καὶ ἐν ζώοις καὶ ἐν τοῖς ἀψύχοις ἐν ἄπασι δὲ διαφθειρομένοις ών μη ή σύστασις εὐθὺς ἐκ τοιαύτης ύλης έχει γὰρ ένια καὶ τὴν τῆς ύλης οσμήν, ου μην έπι πάντων γε τουτ' άκολουθεί. πολλά γάρ οὐ κακώδη τὰ ἐκ τῶν σαπρῶν, ὡς ούδ' οί μύκητες οί έκ της κόπρου Φυόμενοι τὰ δ' έκ σήψεως φυόμενα καὶ συνιστάμενα κακώδη. εύοσμα μεν οθν ώς άπλως είπειν τα πεπεμμένα καὶ λεπτά καὶ ηκιστα γεώδη τὸ γὰρ τῆς ὀσμῆς έν ἀναπνοή κακώδη δὲ δηλονότι τάναντία. πολλά δὲ ὤσπερ τῶν γλυκέων ἐμφαίνει τινὰ πικρότητα. καὶ τῶν εὐωδῶν βαρύτητα ταῖς ὀσμαῖς.

4 ΙΙ. "Εχει δὲ ἔκαστον ὀσμὴν ἰδίαν καὶ ζώων καὶ φυτῶν καὶ τῶν ἀψύχων ὄσα ὀσμώδη· πολλὰ

* i.e. putridity is a quality which things acquire as they decay, and does not necessarily imply that they are themselves formed out of decaying matter. In fact things so produced are not always 'putrid'

'4 The sense is apparently that 'lighter' (or less solid) things exhale a lighter and pleasanter odour because in their

¹ And so here we have a term which possibly is applied only to the one class of 'evil' odours

² Which is not an 'evil' odour

δ' ήμιν οὺ φαίνεται διὰ τὸ χειρίστην ἔχειν τὴν αἴσθησιν ταύτην ὡς εἰπεῖν. ἐπεὶ τοῖς γε ἄλλοις καὶ τὰ παντελῶς ἄοδμα φαινόμενα δίδωσί τινα ὀσμήν, ὥσπερ αὶ κριθαὶ τοῖς ὑποζυγίοις αὶ ἐκ τῆς Κεδροπόλιος, ἃς οὐκ ἐσθίουσιν διὰ τὴν κακωδίαν. ἡμᾶς δὲ καὶ αὶ τῶν ζώων λανθάνουσιν τῶν ὀσμωδῶν δοκούντων. εὐωδία μὲν οὖν οὐθὲν φαίνεται καθ' αὐτὸ χαίρειν ὡς εἰπεῖν, ἀλλ' ὅσα πρὸς τὴν τροφὴν καὶ τὴν ἀπόλαυσιν. πονεῖν δ' ἔνια φαίνεται ταῖς ὀσμαῖς καὶ ταῖς εὐωδίαις, εἴπερ ἀληθὲς τὸ ἐπὶ τῶν γυπῶν καὶ τῶν κανθάρων. τοῦτο δὲ δῆλον ὡς δι' ἐναντίωσιν τῆς ἐν αὐτοῖς φύσεως. ὡς δὲ καθ' ἔκαστον ἄμα δεῖ τὴν γε κρᾶσιν τὴν ἐκάστου καὶ τὴν τῆς ὀσμῆς λαμβάνειν δύναμιν.

Είσὶ μὲν οὖν ἔνιαι τῶν εὐόσμων καὶ ἐν ταῖς τροφαῖς, οἶον αἱ τῶν ἀκροδρύων καὶ ἀπίων καὶ μήλων· αὖται γὰρ ἄνευ τῆς προσφορᾶς ἡδεῖαι, καὶ μᾶλλον ὡς εἰπεῖν. οὐ μὴν ἀλλ᾽ ὡς γ᾽ ἀπλῶς διελεῖν αἱ μέν εἰσι καθ᾽ αὐτὰς αἱ δὲ κατὰ συμβεβηκός αἱ μὲν τῶν χυλῶν καὶ τῆς τροφῆς κατὰ συμβεβηκός, αἱ δ᾽ ὥσπερ τῶν ἀνθῶν καθ᾽ αὐτάς. ὡς δ᾽ ἐπίπαν τὰ εὔοσμα, καθάπερ καὶ πρότερον ἐλέχθη, δύσχυμα καὶ στρυφνὰ καὶ ὑπόπικρα.

¹ In Thrace. cf Arist. H.A 9 36. Turn. quotes an illustration from Scriptor θαυμασίων ἀκουσμάτων 126.
² εὐωδίαις. ° εὐωδίεσι.

CONCERNING ODOURS, 4-5

cases it is not obvious to us because, one might almost say, our sense of smell is inferior to that of all other animals Thus things which appear to us to have no odour give forth an odour of which other animals are conscious: for instance beasts of burden can smell the barley of Kedropolis, and refuse to eat it because of its evil odour. Also we are unaware of the odour of animals which appear to possess one Now no animal appears to take pleasure in a good odour for its own sake, so to speak, but only in the odour of things which conduce to its nurture and enjoyment. Indeed some animals seem to be annoved by odours, even good 2 ones, if what is said of vultures and beetles be true; the explanation is that their natural character is antipathetic to odours. To appreciate this in particular cases one should take into consideration the temperament of the animal in question and also its power of smell.

Of smell and taste.

Now the odour of some things which have a good odour resides in things which are used for food, for instance that of stone-fruits 3 pears and apples, the smell of which is sweet even if one does not eat them; indeed it may be said to be sweeter in that case. However, to make a general distinction, some odours exist independently, while others are incidental; 4 those of juices and things used for food are incidental, those of flowers exist independently. And, as was said above, 5 things which have a good odour are generally of unpleasant, astringent of

ακροδρύων here apparently plums, peaches, etc
 ι e the smell is a kind of 'accident,' or by-product of the taste.
 1 3.

ἔνια δὲ τῶν εὐχύμων καὶ κακώδη, καθάπερ καὶ τδ Αἰγύπτιον καλούμενον σῦκον, γλυκὰ ὄν, καὶ εἰ μὴ πανταχοῦ ἀλλ' ἐνιαχοῦ. καὶ ἡ ἄρκευθος ἐμφαίνει τινὰ τῆ μασήσει κακωδίαν γλυκεῖα οῦσα τὸ δ' οῦρον ποιεῖ εὐῶδες.

- Έπεὶ δὲ τῶν ὀσμῶν αἱ μὲν ἐν φυτοῖς καὶ τοῖς τούτων μορίοις, οἶον κλωσὶ φύλλοις φλοιοῖς καρποῖς δακρύοις, αἱ δὲ ὥσπερ διείλομεν ἐν ζώοις [καὶ φυτοῖς] καὶ τοῖς ἀψύχοις, αὖται μὲν φανερὸν ὅτι πέψιν ἔκασται λαμβάνουσιν ἐν τοῖς οἰκείοις [aἰς]· καὶ τὸ εὐῶδες καὶ κακῶδες ἀκολουθεῖ κατὰ τὰς οἰκείας φύσεις, ἡ δὲ πέψις τῷ οἰκείῳ θερμῷ. ἐν δὲ τοῖς ἀψύχοις ταῖς τῶν ἀπλῶν δυνάμεσι καὶ γίνονται καὶ μεθίστανται καθάπερ οἱ χυμοί.
- ΙΙΙ. "Όσαι δὲ δὴ κατὰ τέχνην καὶ ἐπίνοιαν γίνονται περὶ τούτων πειρατέον εἰπεῖν ὥσπερ καὶ περὶ τῶν χυλῶν. ἐν ἀμφοῖν δὲ δῆλον ὡς ἀεὶ πρὸς τὸ βέλτιον [ἦν] ἡμῖν ἡ ἀναφορά· πᾶσα γὰρ τέχνη στοχάζεται τούτου. εἰσὶ μὲν οὖν καὶ τοῖς ἀμίκτοις ὀσμαί τινες πρὸς ἃς συνεργεῖν πειρῶνται καὶ ταῖς παρα<σκευαῖς, ὡς καὶ> πρὸς τὰς τῶν χυμῶν εὐστομίας. οὐ μὴν ἀλλ' ὡς γ' ἀπλῶς

³ καὶ φυτοῖς om Turn

CONCERNING ODOURS, 5-7

somewhat bitter taste. Again some things which have a good taste have also an evil odour, such as the carob, which is sweet (this is true of some regions, if not of all) Again the Phoemician cedar, though it is sweet to the taste, when chewed produces a sort of evil odour, though it makes the water fragrant.

Of odours in plants.

Some odours being found in plants or in their parts—as twig, leaf, bark, fruit, gum—and others, as we distinguished, in animals 3 and in inanimate things, it is plain that the former are matured each of them in the part to which it belongs; and 4 a good or evil odour follows according to the natural character of that part, the maturing being due to the warmth which is found in it. On the other hand in inanimate things the odour, like the taste, is formed and modified by the properties of the simple substances of which the thing is made.

Of artificial odours in general and their manufacture expecially of the use of perfumes in wine.

III. Next we must endeavour to speak of those odours, and also those tastes, which are artificially 5 and deliberately produced. In either case it is clear that improvement is always what we have in view; for that is the aim of every artificial process. Now even uncompounded substances have certain odours, which men endeavour to assist by artificial means, 6 even as they try to assist nature in producing palatable tastes. However, to speak generally, the

⁵ The same phrase occurs in similar connexion C P. 6. 11, 2.

⁶ Text defective. Ald Bas Vo. have marks of omission. W. after Turn gives και ταῖς παρα < σκευαῖς, ὡς καὶ > ταῖς τῶν χυμῶν εὐστο < μίαις >, which I have slightly altered.

εἰπεῖν ἐν μίξει τὸ πλέον, καὶ οὕτως αἱ <μίξεις δυοῖν μὲν ὡς τῷ γένει λαβεῖν, ὑγροῦ καὶ ξηροῦ· τριχῶς δὲ γί<νονται>, ὅταν ἢ ὁμογενὲς ὁμογενεῖ, ἢ παράλλαττον τῷ παραλλάττοντι, ἢ ὑγρῷ ὑγρὸν ἢ ξηρῷ ξηρόν, <ἢ ὑγρῷ ξηρόν>.

8 Έκ δυοῦν γὰρ τούτων καὶ ἡ τῶν χυλῶν καὶ τῶν ὀσμῶν γένεσις ὡς μὲν οἱ τὰ ἀρώματα καὶ τὰ διαπάσματα συντιθέντες ξηροῖς πρὸς ξηρά ὡς δ' οἱ τὰ μύρα κεραννύντες ἡ τῷ οἴνῷ ἐπιχέοντες ὑγροῖς πρὸς ὑγρά. τὸ δὲ τρίτον, ὁ καὶ πλεῖστόν ἐστιν, ὡς οἱ μυρεψοὶ ξηροῖς πρὸς ὑγρά παντὸς γὰρ μύρου καὶ χρίσματος ἡ σύνθεσις αὕτη. δεῖ δ' εἰδέναι ποῖαι ποίοις εὔμικτοι καὶ ποῖαι ποίοις συνεργοῦσιν εἰς τὸ ποιεῖν μίαν ὥσπερ ἐπὶ τῶν χυμῶν. καὶ γὰρ ἐκεῖ ταὐτὸ τοῦτο ζητοῦσιν οἱ μιγνύντες καὶ οἶου ἀρτύοντες. ταῦτα μὲν οὖν ἐν οἷς καὶ δι' ὧν αἱ τέχναι ποιοῦνται τὰ τέλη.

Μίγνυνται δὲ τὰ μὲν αὐτῆς τῆς ὀσμῆς ἔνεκα καὶ πρὸς ταύτην τὴν αἴσθησιν, τὰ δ' ώσπερ ἡδύνειν βουλόμενα τὴν γεῦσιν, οἶον ὡς οἱ τὰ μύρα τοῖς οἴνοις ἐπιχέοντες ἡ τὰ ἀρώματα ἐμβάλλοντες.

I have supplied μέξεις to fill the lacuna marked by W. after οδτως α: the text to the end of the section is defective, but a makeshift restoration and rendering seem possible: the sense of οδτως is obscure.

CONCERNING ODOURS, 7-9

result is usually obtained by a mixture, and accordingly 1 such mixtures are of two things (or classes of things), a liquid and a solid: but there are three ways in which the result may be reached (the combination 2 being one either of like with like, or of unlike substances), according as a liquid is compounded with another liquid, a solid with another

solid, or a solid with a liquid.

For tastes and odours alike are derived from these two things: the method of the makers of spices and perfume-powders is to mix solid with solid, that of those who compound unguents or flavour wines is to mix liquid with liquid: but the third method, which is the commonest, is that of the perfumer, who mixes solid with liquid, that being the way in which all perfumes and ointments are compounded Further one must know which odours will combine well with which, and what combination makes a good blend, just as in the case of tastes: for there too those who make combinations and, as it were, season their dishes, are aiming at this same object. So much for the ingredients and the methods whereby these arts attain their ends.

The object of the mixture is in the one case simply the production of a particular odour and the gratification of the corresponding sense, in the other there is a desire to produce, as it were, a pleasanter taste: this for instance is the object of flavouring wine with perfumes or of putting spices into it.

CONCERNING ODOURS, 9-11

¹ For the two senses of taste and smell being akin to one another, each provides in a way for the enjoyment of the other: wherefore it is through things which appeal to the taste, as well as those which appeal to the sense of smell, that men try to discover

fragrant odours.

The question may perhaps be raised why perfume and other fragrant things, while they give a pleasant taste to wine,2 yet have not this effect on any other article of food, but in all cases spoil food, whether it be cooked or not. The explanation we must take to be that this is what happens—the perfume if mixed with solid 3 things is in any case powerful enough to deprive them of their proper taste, and at the same time it makes obtrusive its own taste, which is astringent and somewhat bitter,-all perfumeries having that character,—while, if one bites up the food, this effect is even 4 more apparent because the food is crushed and broken up, and also because it remains longer in the mouth. But on wine neither effect is produced, since in this the taste is very strong and too generally diffused to be overpowered: also wine does not linger on the palate for any length of time, but merely touches it, so that, while it makes one conscious of its own pleasant taste, it does not make the palate feel the bitter unpalatable taste of the perfume: in fact the odour of this acts as a sort of relish 5 to the draught. This effect indeed to it has on wine which is sweet and specially needs the addition of perfume, because it has no 'relish' of its own; while with other wines the reason is that, as the effect of the mixture, the

⁵ Sc. 'bouquet'

CONCERNING ODOURS, 11-13

two 1 odours combine, as it were, to form one. Wine indeed, as was said before, 2 has a special property of assimilating odours

Another question also suggests itself,-why it is that, while the smell of flowers and other 3 things used for garlands, though it is not so strong, can be perceived even at a great distance, the iris-perfume,4 spikenard and other fragrant solids smell stronger at a short distance: and of some of these the smell is only perceived when they are eaten, while some need even to be bruised and broken up, and others to be subjected to fire, as myrrh frankincense and anything that is burnt as incense. The explanation is that, whereas in flowers that which causes the smell is on the surface, seeing that the texture of flowers is open and they are not substantial, in all such solid substances as roots the power of producing smell is diffused through a substantial mass, while the exterior parts are dried up and of close texture: and this is why flowers emit the scent which exhales from them to a long distance, while things like roots need an opening of their passages. Hence, when these are broken up or bruised, they are in all cases more fragrant, while, 5 if flowers are crushed, they have a comparatively evil smell: for under such treatment roots give forth the property which belongs to them, but flowers acquire a property which is not their Again frankincense and myrrh, since they are by nature of even closer texture than roots, need a gentle application of fire, which, by gradually warming them, will cause the scent to be exhaled. For, if these substances are bruised or crushed, they will indeed present an odour, but it will not be so

⁵ cf. Arist. Probl 12 9, 13 3 and 11.

¹ This passage was misunderstood by Plin. 13. 19. The sense seems to be that the viscous character of oil, though preservative of perfume, is not easily receptive of it.

CONCERNING ODOURS, 13-16

sweet nor so lasting as when they have been subjected to fire. Such are the explanations of these difficulties.

Of the oils used as the vehicle of perfumes.

IV. Now the composition and preparation of perfumes aim entirely, one may say, at making the odours last. That is why men make oil the vehicle of them, since it keeps a very long time and also is most convenient for use. ¹ By nature indeed oil is not at all well suited to take in an odour, because of its close and greasy character: and of particular oils this is specially true of the most viscous, such as almond-oil, while sesame-oil and olive-oil are the least receptive of all.

The oil most used is that derived from the Egyptian 2 or Syrian balanos, since this is the least viscous; the olive-oil which is most used is that which is pressed from 'coarse olives's in the raw state, since this is thought to be the least greasy and the least coarse: this is used while it is new, not when it is old, for that which is kept above a year is useless, having become thick and viscous. This then is the kind of olive-oil which is most suitable, since it is the least greasy Some say that for unguent the oil derived from bitter almonds is best these are abundant in Cilicia, where an unguent is made from them. It is said that this is suitable for choice perfumes, like the oil of the Egyptian balanos: this is suitable in itself,4 however the shells of the fruit are thrown into the oil to give it a good odour: indeed they are also thrown into

CONCERNING ODOURS, 16-18

that ¹ which is made from bitter almonds. Once more, is it not inconsistent to seek the vehicle which has the least odour of its own, such as the oil which is pressed raw from 'coarse olives,' and yet at the same time to use the above-mentioned ² oils as vehicles? (for oil of almonds has a pungent smell). Possibly the explanation is that it is only by being cooked that oil acquires an evil smell.³ These matters then are subject for enquiry.

They use spices in the making of all perfumes; some to thicken ⁴ the oil, some in order to impart their odour. For in all cases they thicken the oil to some extent to make it take the odour better, just as they treat wool for dyeing. The less powerful spices are used for the thickening, and then at a later stage they put in the one whose odour they wish to secure. ⁵ For that which is put in last always dominates, even if it is in small quantity; thus, if a pound of myrrh is put into a half-pint of oil, and at a later stage a third of an ounce of cinnamon is added, this small amount dominates.

At this one may well wonder; and also why it is that the previous addition of spices, which have an odour of their own, renders the oil more receptive: for the vehicle should be scentless, but a substance over which another substance has thus prevailed, cannot be scentless, so that it ought, one would think, to have become *less* receptive. However both facts, or rather all of them, may be accounted for in the same way:—the spices, being solid, attract to

³ Sc. 'and these oils are used in the raw state' (*) I do not see how Furlanus' explanation, quoted by Sch., is to be found in the text. The following sentence shews that T. does not claim to have settled the question.

⁴ i e. to make it less volatile. 5 cf. Plin. 13 19.

καὶ ἀναδέχεται, διὸ καὶ τὴν συνέχειαν ἐξαιρει·
μανὸν δὲ γενόμενον [καὶ] τοῦ λίπους ἀφαιρεθέντος
ἐν ῷ καὶ ἡ οἰκεία μάλιστα ὀσμή, δεκτικώτερον
ἐγένετο τοῦ ἐπιβαλλομένου διὰ τὸ μὴ ἀντιστατεῦν.

- 19 'Η δὲ ἀπὸ τῶν ἀρωμάτων ὀδμὴ καὶ ἀσθενὴς ἄτε εἰς τὸ λιπαρὸν ἀνηλωμένη, καὶ ἔτι κατέχεται τούτφ διὰ τὸ πληρῶσαι τοὺς πόρους. ὅστε κατὰ λόγον κὰν ἔλαττον ἢ τὸ ἐπιβαλλόμενον ἐπικρατεῖν τὴν τούτου ὀσμήν εἰς ἀσθενέστατον γὰρ ἐμπίπτει καὶ δεκτικώτερον. ἀνὰ λόγον δ΄ ἔχει καὶ ἡ πολυχρονιότης ἡ ἐν ἑκάστφ καὶ ἡ πρὸς τὴν πύρωσιν εὐσθένεια καὶ τἄλλα τὰ τοιαῦτα. τὸ γὰρ δεκτικώτατον, οἶον τῆς βαλάνου, καὶ χρονιώτατον, καὶ διὰ τὴν αὐτὴν αἰτίαν μάλιστα γὰρ ὥσπερ ἐν γίνεται καὶ συμφυὲς τὸ μάλιστα δεχόμενον ἀεὶ γὰρ τὸ τοιοῦτον διαμονώτατον, διὸ καὶ πυρούμενον μάλιστα ἀπαθές.
- 20 'Ωσαύτως δὲ καὶ τῶν ἄλλων τὸ σησάμινον, τοῦτο γὰρ δεκτικώτατον· τὸ δὲ ἀμυγδάλινον παρακμάζει ταχὺ καὶ ὀλιγοχρονιώτατον διὰ τὴν ἐναντίαν αἰτίαν· τὸ γὰρ ἥκιστα δεξάμενον τάχιστα μεθίησι. τοῦ ῥοδίνου δὲ μάλιστα δεκτικὸν τὸ

¹ I have bracketed καὶ

²⁻² This passage is omitted, apparently by accident, in both W.'s texts, though represented in his Latin version. I

CONCERNING ODOURS, 18-20

themselves the viscid part of the oil, and so it attaches itself to them; thus the density of the oil is destroyed: the oil, thus becoming thinner by the removal ¹ of its viscid part which chiefly contains the characteristic odour, becomes more receptive of the spice which is added to it, because it does not now offer resistance.

Again that odour which is due to the spices becomes less powerful as it is spent on the viscid part of the oil, while at the same time it is preserved by this because it has entirely filled up its passages. Wherefore it naturally follows that, even if the added spice is in small quantity, its odour predominates, since it passes into a vehicle which is in itself not at all powerful and which is more receptive than itself A corresponding account may be given of the keeping quality of the several oils, of their power of resisting fire, and other such Thus that oil which is most receptive, qualities for instance, that of the Egyptian balanos, will also keep longest, and for the same reason; namely that that oil which is most receptive unites, more than others, into one single substance, as it were, with the spices Such a substance will always last longer than others; which also explains why, if exposed to fire, it is less affected than others

Of the other oils the same applies to that of sesame, this being specially receptive; ² but, for the contrary reason, almond-oil soon loses its virtue and keeps for a shorter time than any other, for that oil which has been least receptive parts soonest with the property received. Sesame-oil however receives rose-perfume better than other oils ² because of its have printed it from Sch 's text. The omission is evidently due to the double occurrence of $\tau h \sigma \eta \sigma \mu \mu \nu \rho \nu$,

CONCERNING ODOURS, 20-23

wiscad quality; and, when subjected to fire, it gives out a smell of sesame, as though it were being disintegrated. Such are the special characters and properties of the various oils.

Of the spices used in making perfumes and their treatment.

V. Almost all spices and sweet scents except flowers are dry hot astringent and mordant. Some also possess a certain bitterness, as we said above, as iris, myirth, frankincense, and perfumes in general. However the most universal qualities are astringency and the production of heat; they actually produce these effects.

All spices are given their astringent quality by exposure to fire, but some of them assume their special odours even when cold and not exposed to fire; and it also appears that, just as with vegetable dyes some are applied hot and some cold, so is it with odours. But in all cases the cooking, whether to produce the astringent quality or to impart the proper odour, is done in vessels standing in water and not in actual contact with the fire; the reason being that the heating must be gentle, and there would be considerable waste if these were in actual contact with the flames; and further the perfume would smell of burning.

However there is less waste when the perfume obtains its proper odour by exposure to fire than when it does so in a cold state, since those perfumes which are subjected to fire are first steeped either in fragrant wine or in water: for then they absorb ¹ less: while those which are treated in a cold state, being dry, absorb ¹ more, for instance bruised iris-root. Thus, if

anto eight and a half gallons of oil we put thirteen gallons of dry and bruised iris-root, they say that much loss is caused, while if one does not steep it too much, only about eleven pints and a half are wasted: and in the case of most perfumes the waste is less.

However the superior 2 iris-perfume is made by using the root dry and not subjecting it to fire: for then its virtue asserts itself more completely than when it is steeped in a liquid or subjected to fire. It also comes to pass that, if the perfumes have been first steeped, their virtues are, as it were, squeezed out of them to a greater extent, because they take in and absorb less: and so, when they are making them astringent, they do not leave the spices in the oil for long, but take them out, so that they should not absorb an excessive amount.

For making each perfume they put in the suitable spices. Thus to make kypros³ they put in cardamom⁴ and aspalathos,⁵ having first steeped them in sweet wine.⁶ To make rose-perfume they put in ginger-grass aspalathos and sweet-flag: and these are steeped as in the case of kypros. So too into each of the others are put the spices which suit them. Into rose-perfume moreover is put a quantity of salt⁷: this treatment is peculiar to that perfume, and involves a great deal of waste, twenty-three gallons of salt being put to eight gallons and a half of the perfume

The manufacture of kypros resembles that of

 $^{^6}$ τ $\hat{\varphi}$ εὐώδει here evidently means the same as τ $\hat{\varphi}$ γλυκεῖ, 44, where τ $\hat{\varphi}$ οἴτ φ τ $\hat{\varphi}$ εὐώδει occurs just above: cf μελικράτ φ $\hat{\eta}$ γλυκεῖ, C.P. 6 17 2

wose-perfume, except that, unless one soon takes out the flowers and squeezes them out, decay sets in and ruins the perfume by giving it a disagreeable smell, since they cause decay as they get soaked. Similar also is the manufacture of quince-perfume 1: the oil is first made astringent, and is cold when the quinces 2 are put into it: then they take them out before they turn black, removing each batch before the next is put in: for, as they turn black, decay ensues because they get soaked through—just as in the case of kypros.

Of the various parts of plants used for perfumes, and of the composition of various notable perfumes.

VI. ³ Perfumes are compounded from various parts of the plant, flowers leaves twigs root wood fruit and gum: and in most cases the perfume is made from a mixture of several parts. Rose and gilliflower perfumes are made from the flowers: so also is the perfume called susinon, ⁴ this too being made from flowers, namely, lilies: also the perfumes named from bergamot-mint and tufted thyme, kypros, and also the saffron-perfume; the crocus which produces this is best in Aegina and Cilicia Instances of those made from the leaves are the perfumes called from myrtle and drop-wort ⁵: this grows in Cyprus on the hills and is very fragrant: that which grows in Hellas yields no perfume, being scentless.

⁶ From roots are made the perfumes named from iris spikenard and sweet marjoram, ⁷ an ingredient in which is koston; for it is the root to which this name

⁶ Instances of perfumes made from twigs seem to be missing ⁷ cf. 30 Text perhaps defective

is applied. The Eretian unguent is made from the root of *kypeiron*, which is obtained from the Cyclades as well as from Euboea. From wood is made what is called 'palm-perfume': for they put in what is called the 'spathe,' having first dried it. From fruits are made the quince-perfume, the myrtle, and the bay. The 'Egyptian' is made from several ingredients, including cinnamon and myrth.

Again from several parts of the plant is made the perfume called megaleion,3 which is made from cinnamon and and from the myrrh when it is bruised flows an oil. it is in fact called stakte 5 (in drops) because it comes in drops slowly. Some indeed say that this is the only simple uncompounded perfume, and that all the others are compound, though made from a larger or smaller number of ingredients, and that iris-perfume is made from the smallest number of all assent this, but others declare that the manufacture of stakte (myrih-oil) is as follows having bruised the myirh and dissolved it in oil of balanos over a gentle fire, they pour hot water on it, and the myrrh and oil sink to the bottom like a deposit; and, as soon as this has occurred, they strain off the water and squeeze the sediment in a press

Megaleron, these authorities say, is compounded of burnt lesin 6 and oil of balanos, with which are mixed cassia cinnamon and myirh. They add that this perfume and the Egyptian are the most troublesome

CONCERNING ODOURS, 30-32

to make, since no others involve the mixture of so many and such costly ingredients. To make megaleion, they say, the oil is boiled for ten days and nights, and not till then do they put in the resin and the other things, since the oil is more receptive when it has been thoroughly boiled. The superior kind of sweet marjoram-perfume, they say, is made of all the best spices except sweet marjoram: in fact this is the only spice which perfumers do not use for any perfume, and the name is a misnomer

Some perfumes are made up colourless, some are given a colour. They give a colour to sweet marjoram-perfume, rose-perfume, and megaleion, while among expensive kinds the Egyptian, quince-perfume and kypros are colourless, as well as all the cheaper kinds. The reason why these are made without colour is that it is desired that the Egyptian and kypros should look white and that quince-perfume should have the colour of quinces, while it is not worth while to add colour to the cheaper sorts. The dye used for colouring red perfumes is alkanet, the sweet marjoram-perfume is dyed with the substance called khroma (dye), which is a root imported from Syiia.

Of the properties of various spices

VII. It is thought that not only the smells of perfumes contribute to a pleasant taste, but also the qualities of pungency and heat which are found in some of them: accordingly some of these perfumes are also mixed with certain wines to give, as it were, 'point' to them. Thus myrrh is hot and has a biting quality as well as being astringent, and it also

¹ Clearly distinct from that mentioned in 28

στύψεως, ἔχει δὲ καὶ πικρίαν. τὸ δὲ κινάμωμονδριμύτητά τινα μετρίαν μετὰ θερμότητος. παραπλησίως δὲ καὶ τὸ κόστον. ἡ δὲ κασία τούτων ὑπερβάλλει θερμότητι καὶ δριμύτητι καὶ στύψει. θερμὴ δὲ καὶ στυπτικὴ καὶ ἡ ἰρις, καθ' ὑπερβολὴν δὲ καὶ πικρὰ νέα οὖσα καὶ τὸν χρῶτα τῶν ἐργαζομένων ἀφελκοῖ. δηκτικὸν δὲ καὶ τὸ καρδάμωμον μετὰ θερμότητος. τοῦ δὲ βαλσάμου ὁ μὲν ὀπὸς καὶ τὸ καρπίον ἀνδρικώτερα πρὸς ἀμφότερα ταῦτα, τὸ δὲ ξύλον ἀσθενέστερον. παραπλησίαν δ' ἔχει τούτφ δύναμιν καὶ τὸ ἄμωμον.

Ό δὲ σχοινος δηκτικώτερον μὲν τοῦ καλάμου καὶ θερμότερον, στυπτικὰ δὲ ὁμοίως ἄμφω. τούτων δὲ στυπτικώτερον τὸ κύπειρον. στύφει δὲ καὶ ἡ ἀσπάλαθος ἡ εὐώδης. ἡ δὲ νάρδος δηκτικὴ μετὰ θερμότητος. τὸ δὲ μάρον καὶ τὸ χρῶμα τὸ εἰς τὸ ἀμαράκινον ἐμμιγνύμενον θερμαντικά. [συνεργεί δὲ καὶ τῆς ἀγχούσης τὸ ῥιζίον εἰς τὴν χρόαν τοῦ ῥοδίνου καὶ τῆς ἴριδος.]

Νέα μὲν οὖν ὄντα τῶν ἀρωμάτων ἔνια δυνάμεις μὲν εὐθὺς ἔχει βαρείας καὶ δριμείας, παλαιούμενα δὲ μέχρι τῆς ἀκμῆς γλυκαίνεται, εἶτ' ἀναλύεται πάλιν. οἶον ἡ ἴρις εἰς μὲν τὴν ἐργασίαν ἀκμάζει μετὰ τὴν συλλογὴν τρία ἔτη, καὶ διαμένει δὲ πλεῖστον χρόνον εξ ἔτη. τὸ δὲ μάρον ἔτη δύο. ἡ δὲ σμύρνα δέκα ἔτη διαμένει βελτίων γενομένη. παραπλησίως δὲ τούτοις ἡ τῆς ἀκμῆς διαμονὴ καὶ τοῦ κιναμώμου καὶ τοῦ κόστου καὶ τῆς κασίας. σχοῖνος δὲ καὶ κάλαμος παρακμάζει ταχύ. τῶν δ' ἀνθῶν τὰ μὲν εὐθὺς χλωρὰ ὄντα

CONCERNING ODOURS, 32-34

whas a bitter quality. Cinnamon again has a fair amount of pungency as well as heat. So too is it with hoston Cassia exceeds both of these in heat pungency and astringency. Iris-perfume is hot and astringent, and excessively bitter when it is fresh, in which state it causes sores on the skin of those that work on it. Cardamom has also a biting quality as well as heat. The juice and the fruit of balsam of Mecca are more active in producing both these qualities, while the wood is less so. Nepaul cardamom has also a property similar to this

Ginger-grass ² has a more biting quality than sweet-flag, ³ and is hotter; but both are equally astringent. Kypeiron is however more astringent than either. The sweet-scented aspalathos also has this quality Spikenard has a biting quality as well as heat. Maron and the khroma which is mixed with sweet marjoram-perfume are heating. ⁴The root of alkanet also contributes to the colour of rose-perfume

and iris-perfume.

Now some spices when they are fresh have at first heavy and pungent qualities, but in course of time become sweet till they have reached their prime, and then lose their properties again. Thus the iris is at its prime for manufacturing the perfume for three years after it was gathered, and 5 lasts for six years at longest. 5 Maron lasts two years; myrrh ten, and improves with time. Cinnamon hoston and cassia keep at their best for about the same periods as these. Ginger-grass and sweet-flag soon get past their prime. Of flowers some, like the rose, possess

4 This sentence seems irrelevant here.

⁵⁻⁵ καl—ξτη These words are omitted, apparently by accident, in both W.'s editions, though represented in his Latin translation.

τὰς δυνάμεις ἔχει, καθάπερ τὸ ῥόδον, τὰ δὲ ξηρανθέντα, καθάπερ ὁ κρόκος καὶ ὁ μελίλωτος· χλωρὰ γὰρ ὑγρότερα.

35 Τὰς μὲν οὖν φύσεις καὶ δυνάμεις τῶν ἀρωμάτων
ἐκ τούτων θεωρητέον.

VIII. Δοκεῖ δὲ τὸ μεγαλεῖον ἀφλέγμαντον εἶναι παντὸς τραύματος τὸ δὲ ῥόδινον ἄριστον πρὸς τὰ ὧτα. ταῦτα δ' οὐκ ἀλόγως. τοῦ μὲν γὰρ ἡ σύνθεσις ἐκ ῥητίνης κεκαυμένης, ὥσπερ ἐλέχθη, καὶ κασίας καὶ κιναμώμου καὶ σμύρνης, ἄπαντα δὲ ταῦτα στυπτικὰ καὶ ξηραντικά. τὸ δὲ ῥόδινον τοῖς ὡσὶν ἀγαθὸν ὅτι ἐν άλσὶν ἡ ποίησις ἀναξηραίνει γὰρ καὶ ἐκθερμαίνει διὰ τοὺς ἄλας διὸ καὶ ἡ άλοσάχνη ἀγαθόν. ἀλλὰ τὸ τῆς στραγγουρίας λόγου δεῖται καὶ γὰρ ταύτη λέγουσι μάλιστα βοηθεῖν. αἴτιον δ' ἂν εἴη διότι πᾶν τὸ ὑπεξάγειν μέλλον ἀναλῦσαι δεῖ πρότερον τὸ ὑπεξαχθησόμενον τοῦτο δὲ οἱ ἄλες ποιοῦσιν, ἡ δ' εὐωδία τὴν ὁρμὴν ἀπέδωκε.

their virtues from the first while they are still fresh, some only after they are dried, as crocus and *melilotos*, these having a certain amount of moisture while they are fresh.

These examples may suffice for study of the characters and properties of spices

Of the medicinal properties of certain perfumes

VIII. Megaleion is believed to relieve the inflammation caused by any wound, and rose-perfume to be excellent for the ears. And this is probable enough For the former is composed, as was said, of burnt resin cassia cinnamon and myrrh, and all these have astringent and drying properties: while the reason why rose-perfume is good for the ears is that salt is used in the manufacture of it: for it is by reason of the salt that it dries and warms (which is why 'sea-foam 2' is also good for the ears). Its use against strangury however needs explanation: for it is said to be specially helpful against this. The explanation may be that anything which is to remove the difficulty must first dissolve that which is to be removed; and this is the effect of the salt, while the fragrance supplies the necessary stimulus

Why however, it may be asked, though irrsperfume is fragrant, does it not give the stimulus? Perhaps it is because it is astringent and closes the passages, so that by shutting them it prevents free course. On the other hand this perfume acts as a laxative on the bowels because of its heating quality and because it astringes the passages leading to the bladder: for, when these are closed, the liquid collects in the bowels. In general irrs-

² Said to be a zoophyte. cf. Arist. H.A. 9 14 2.

τὸ ἴρινον καὶ ἄλλα τῶν μύρων. ἡ δ' αἰτία πάντων, ὡς καθόλου εἰπεῖν ἐν ταῖς δυνάμεσι ταῖς εἰρημέναις, ὅτι στυπτικὰ καὶ θερμαντικά τὰ ἀρώματα γὰρ τὰ τοιαῦτα` φαρμακώδη. ταῦτα μὲν οὖν ἔξω τῆς τέχνης.

CONCERNING ODOURS, 36-38

perfume, as well as others, has medicinal properties. And the explanation in all cases, to put it generally, hes in the above-mentioned properties of astringency and heating; for it is spices possessing these properties that are medicinal However these matters lie outside our subject of study.

Of rules for the mature of spaces, and of the storing of various perfumes.

IX. There is no fixed rule for the combination and mixture of spices in the sense that the same components will always produce a satisfactory and a uniform result: the result varies by reason of the varying quality of the virtues found in the spices. For this there are several reasons. One, which applies also to fruits, is the character of the season; this causes the virtues to be sometimes much more than ordinarily powerful, sometimes less so Another is to be found in the time of collection, according as it is made before or after the spices are in their prime. A third cause operates after the collection, that is, in the case of those spices which need time to come to their prime, as was said 1: for here too it is possible to be too soon or too late.

Of these causes that which depends on the seasons is not within our control, except so far as we can discover which spices in a particular season have powerful, and which weak virtues 2 But we can control those which depend on collecting them when in their prime, or on keeping them after they are collected, that is, if we know pretty well how to hit the right moment.

So much for the origin and composition of perfumes.

^{1 34. 2 1.}e. and we can select accordingly.

Πολυχρονιώτατον δ' έστὶ τό τ' Αἰγύπτιον καὶ τὸ ἴρινον καὶ τὸ ἀμαράκινον καὶ τὸ νάρδινον, πάντων δὲ μάλιστα ἡ στακτή, διαμένει γὰρ ὁποσονοῦν χρόνον. μυροπώλης δὲ τις ἔφη παρ' αὐτῷ μεμενηκέναι Αἰγύπτιον μὲν ὀκτὰ ἔτη, ἴρινον δὲ εἴκοσι, καὶ ἔτι διαμένειν βέλτιον ὃν τῶν ἀκμαζούτων. ἡ μὲν οὖν χρονιότης ἐν τούτοις.

CONCERNING ODOURS, 38-41

Those which last longest are the Egyptian, the iris, the sweet marjoram and the spikenard perfumes: but myrrh-oil has the longest life of any; for it will keep any time A certain perfumer said that he had had Egyptian perfume in his shop for eight years, and iris-perfume for twenty, and that it was still in good case, in fact better than fresh perfume. These are instances of perfumes which will keep a long time.

On the other hand all those made from flowers have little vigour. These are usually at their best after two months, but they deteriorate when a year has past and the season has come round again at which the flowers are at their best. Also, as these perfumes lack vigour, so also do they quickly mellow, and, in most cases, quickly evaporate. Those made from roots and the other parts of the plant last longer, their odour being fuller stronger and more substantial

Perfumes are rumed by a hot season or place or by being put in the sun. This is why perfumers seek upper rooms which do not face the sun but are shaded as much as possible. For the sun or a hot place deprives the perfumes of their odour, and in general makes them lose their character more than cold treatment: while cold and frost, even if they make them less odorous by congealing them, yet do not altogether deprive them of their virtue. For the most destructive thing that can happen to them, as to wines and other savours, is that they should be deprived of their proper heat. This is why men put them into vessels of lead and try to secure phials of alabaster—a stone which has the required effect: for lead is cold and of close texture, and stone has

μόλυβδος καὶ ὁ λίθος ὁ τοιοῦτος καὶ ἄριστος τοῖς μύροις ὁ μάλιστα τοιοῦτος. ὅστε δι' ἄμφω τηροῦσι, καὶ τῷ ψυχρῷ καὶ τῷ πυκυῷ, μήτε διιέντες ἔξω τὴν ὀσμὴν μήθ' ὅλως ἐπιδεχόμενοι μηδέν. καὶ γὰρ ἡ ἀναπνοὴ φθείρει καὶ τὸ ἔξωθεν ἐπεισιὸν καὶ ἀλλότριον ἐπεὶ καὶ τὰ πνεύματα φθείρει καὶ καταναλίσκει, καθάπερ ἐλέχθη, τὰς ὀσμάς, ἄλλως τε καὶ τὰς μὴ φυσικάς.

the same character, that being the best for keeping perfumes which has it in the highest degree. So that vessels made of these materials keep the perfume well for both reasons, their coolness and their closeness of texture: they neither let the odour pass away through them, nor do they take in anything else. For evaporation destroys the perfume, and so also does any foreign substance which finds its way in for even draughts of air destroy odours and cause them to waste, as was said, especially those odours which do not belong to a thing's essential nature

Of the properties of certain perfumes

X. Headache is caused by sweet marjoram spikenard and megaleion among costly perfumes: most of the cheap ones have also this effect, notably that made from bay. The lightest are rose-perfume and kypros, which seem to be the best suited to men, as also is hly-perfume. The best for women are myrrh-oil, megaleion, the Egyptian, sweet marjoram, and spikenard: for these owing to their strength and substantial character do not easily evaporate and are not easily made to disperse, and ² a lasting perfume is what women require

Inasmuch however as some perfumes are stronger than others, the stronger being those made from roots and the others already mentioned, for this reason those derived from flowers are more fragrant if they are not bruised, while bruising improves those made from roots and the others. For the former kind evaporate and pass off as they are warmed by the bruising, thus losing their character, while the latter owing to their strength have, as it

¹ cf 57, 58 σύνθετος δσμή or σύνθεσις seems to mean a kind of pot-pourri, which was from time to time renewed with fresh rose-petals. Sch understands σύνθεσις to mean 'clothes in a wardrobe' (cf Lat synthesis), but it must surely have the same meaning here as σύνθετος δσμή. Sch's citation from 57 does not seem to prove his point, and μένουσι πολθυ χρόνου αί συνθέσεις in 58 is conclusive against him. cf also 69

CONCERNING ODOURS, 45-48

other can and fills up the passages of the sense, so that being entirely taken up and filled with it, it is unable to judge of others. For the power of judging is inhibited in two, or possibly in three ways, one is that which has just been mentioned; another is that the sense of smell is, as it were, intoxicated with its powerful virtues and becomes stupefied: the third is that the sense may be preoccupied with the superior odour; for then it is not easy to introduce after it what is inferior, since the sense of smell refuses this—just as the sense of taste in like case refuses flavours and foods in general.

It is also thought that the rose even weakens the effect of compound perfume 1, for, when the flower is at its best, they treat compound perfumes with it; and, when these come to be opened, they smell only or chiefly of rose. However this effect is only temporary and transient because of the weakness and delicacy of the iose-scent, (the very quality which also causes it to assert 2 itself over the scent of the other ingredients). For, as it is so delicate and is compressed by confinement, it is exhaled before the others and disperses in all directions. It is also for this reason that the rose-scent only asserts itself for a short time and then is overpowered again; for anything that is delicate and subtle must be lacking in vigour.

Certain wines have also a similar effect: if they are first drunk, there is no satisfaction in others. Some again make it even difficult to take others

369

² i.e. when the pot-pourn is first opened the 'delicacy' of the rose-scent causes it to be given off quickly and so (1) to be the first scent perceived, (2) to be volatile $-\xi \delta \zeta \omega$ in this passage is used with gen. in two distinct senses

after them; this is the effect for instance of wine of Erythrae, which has a taste of brine and is subtle. The explanation one must endeavour to find by comparing analogous cases. However there is one peculiarity which as we have already more or less indicated, is possessed by rose-perfume only; while all or most of the others are heady, this, as was said, gives actual relief from heaviness and discomfort,

even from that caused by other perfumes.

The reason for this is plain in view of what has been already said, seeing that this perfume overpowers others and penetrates everywhere. For the others that are heady are heavy because they are made of heavy substances, whether roots or juices; while this perfume is both light as to its scent and also by its heat well adapted to bring the passages to a suitable temperature and to open them. For pains in the head are due to an excess of moisture in it, or of air which gets confined in it, so that it is necessary to get rid of the one, and to raise the temperature of the other or to remove it.

And for all such purposes heat is useful, both for removing the moisture or air, and, still more, for raising the temperature of the passages and opening them: and to these ends it is helpful that the perfume should have been prepared with salt, since the effect of salt is to open the passages and to warm them thoroughly. Again the fragrance also supplies a stimulus to movement. This perfume is also considered to be good against lassitude, because its heat and its lightness make it suitable, and also because it penetrates to the inner passages. Some however say that kypros is quite as efficacious: for this too has a delicate scent which is grateful to the

skin. These and similar properties may be considered peculiar to these particular perfumes

Of other properties and peculiarities of perfumes

XI. The admixture of rose-perfume, whether in scents or in flavours, if it be well blended, is beneficial, in the one case by removing the heaviness and strength of the scent, in the other by imparting a fragrant scent or a sweet taste to the flavour, as in the case of wines. ¹ Thus the wine which is served in the town-hall of Thasos, which appears to be of wonderfully delightful quality, is thus flavoured. For they put into the jar a lump of dough which has been kneaded up with honey, so that the wine gets its fragrance from itself, but its sweet taste from the honeyed dough.

This result also follows, it is said, from the mixture of different wines,-for example, if a strong fragrant wine be mixed with one that is mild and without fragrance, (for instance, if wine of Heiaclea be mixed with wine of Erythiae),2 since the latter contributes its mildness and the former its fragrance: ⁸ for the effect is that they simultaneously destroy one another's inferior qualities through the mildness of the one and the fragrance of the other. There are many other such blends mentioned by and known to experts And it is quite to be expected that such a result should follow from blending odours, as it does from blending colours, if one discovers the suitable This then is peculiar to rose-perfume. combinations

However there is one question which applies to all perfumes, namely, why it is that they appear to mutual. I have added καὶ τῆ εὐοσμίτ θατέρου after Sch., his text however is συμπίπτει γὰρ ἄμα, καὶ τὰ κακὰ ἀλλήλων ἀφανίζει, τῆ μαλακότητι < καὶ τῆ εὐοσμία> θατέρου.

¹ Sc a part of the body which, not being fleshy, does not spoil the scent by its warmth So Plin 13 19 appears to give the point—experimentum (unquentorum) inversa manu capitur, ne carnosae partis calor vitiet, though it may be questioned whether inversa manu represents καρποῦ. Pliny's

CONCERNING ODOURS, 53-55

be sweetest when the scent comes from the wrist 1; so that perfumers 2 apply the scent to this part. The explanation must be sought by observing what happens in the contrary case, masmuch as heat changes or destroys the character of a scent, and the effect on the sense of smell is immediately perceived when perfumes are brought into close contact with the skin

The question is also raised why those who do not habitually use perfumes smell of them more strongly, when they do so, than those who use them habitually. The suggestion might be made that this is an illusion due to the fact that the use is not habitual, and does not represent what really happens. it does, it would appear that in the one case the perfume becomes, as it were, confused with a number of other scents which weaken its force (the smell of the skin also becoming mixed with it), while in the other case the porous condition of the skin takes in the scent as it were uncontaminated, and so makes it perceptible by the sense of smell, because it lingers for some time One might also make a suggestion of opposite character, that the skin takes in perfumes less readily because it is not used to them, and so, as the perfumes mingle with it more slowly, they preserve 3 their scent for a longer time. One may add that this is a small point and that all do not agree as to the fact.

Those perfumes whose scent is strongest get the best hold on the skin head and other parts of the body, and last for the longest time: such are phrase presumably means the back of the hand, and suggests that àrb τοῦ καρποῦ may be corrupt

² Sc in offering samples for choice. ³ Sc, it is not absorbed by the skin.

megaleion, Egyptian perfume and sweet marjoramperfume Those on the other hand which are weak and have not a powerful scent, since they are volatile and evaporate, also quickly come to an end: for

instance rose-perfume and kypros.

There are some however whose scent is even better on the second day, when any heavy quality that they possessed has evaporated. Some again are altogether more permanent, as spikenard and irisperfume, and the stronger 1 a perfume is, the longer it lasts. Again some perfumes for some reason keep their scent in the bath when the body is relaxed, or at least do not help to produce a disagreeable effect; while others become disagreeable and cause an even more unpleasant odour than the sweat, as though some soit of decomposition or decay took place.

Let this suffice for an account of the manufacture

and properties of perfumes.

Of the making of perfume-powders and compound perfumes

XII As to the mixing of solid substances to make powders 1 and compound perfumes, we do not find it here necessary to mix certain specified ingredients. the more numerous and the more various the perfumes that are mixed, the more distinguished and the more grateful will be the scent—just as though one were mixing whatever spices themselves 2 were procurable. As a matter of fact the custom is to use a mixture made of all kinds. Again in perfumes of this class the aim and object is not to make the mixture smell of some one particular thing, but to

 $^{^{2}\ \}mathrm{Sc}$ the natural products from which the manufactured perfumes are made

κοινήν τινα την όσμην είναι. διὸ καὶ ἀνοίγοντες διά τινων ήμερῶν τὸ ἐξόζον ἐξαιροῦσιν ἀεὶ καὶ τῶν ἰσχυρῶν ἐλάττω μιγνύουσιν, ὥσπερ . . . τὰ δ' ὅλως οὐ μιγνύουσιν, ὥσπερ τὸ ἐρυσίσκηπτρον, ὑπὲρ οὖ καὶ ἀρτίως ἐλέχθη.

The reference of excipou is obscure.

CONCERNING ODOURS, 57-59

produce a general scent derived from them all. This is why every few days they open the vessel and remove each time that perfume whose scent is overpowering the others, adding at the same time smaller quantities of the less powerful scents, such as . . .,¹ while some perfumes are never added, such as

galingale, of which we spoke just now.

When they make compound perfumes, they moisten the spices with fragrant wine: and this certainly seems to be useful for producing fragrance, seeing that perfumers also use it. These compound perfumes last a long time. They are used to impart a pleasant odour to clothes, while the powders are used for bedding, so that they may come in contact with the skin: for this kind of preparation gets a better hold and is more lasting, so that men use it thus instead of scenting their bodies directly.2 Some, before putting the powder in the bedding, soak it in fragrant wine, so that it may acquire its scent and some powders they moisten by mixing them with mead and wine, or again simply with mead. For in general both these things help to give them fragrance perfumes also last well. From which what was said above becomes manifest, masmuch as solid perfumes, when mixed 3 with one another, acquire a greater fragrance.

*It is to be expected that perfumes should have medicinal properties in view of the virtues of spices: for these too have such virtues. The effects of

⁴ In W.'s text, which I have followed, there is some rearrangement (after Furlanus) of the order of sentences in this chapter and the next. $e\,g\,$ part of §61 is transferred to §59 Both figures are retained for convenience of reference.

plasters and of what some call 'poultices' prove what virtues they display, since they disperse tumours and abscesses and produce a distinct effect on various other parts of the body, on its surface, but also on the interior parts : for instance, if one lays a plaster on his abdomen and breast, the patient forthwith produces fragrant odours along with his eructations.1

Of the characteristic smells of animals, and of certain curious facts as to the smell of animal and vegetuble products.

XIII. The smells of animals correspond to their several characters: each has a smell of its own according to its particular composition. smells are pleasant and pure when? the anumal is in its prime and in good condition, and even pleasanter when they 3 are young and tender. But the smell is strongest and least pleasant at the breeding season, and generally when the body is wasting or out of condition wherefore goats stags hares and other animals have most smell at such times.

It is a remarkable fact and peculiar to the goat that goat-skins 4 are sympathetically affected when the breeding season comes round The reason plainly is that there remains somehow in the hide the sort of virtue or moisture from which auses the breeding impulse when the animal is alive. It is natural therefore that, when this is excited and warmed by the air, the skin also should be excited 5 far as it belongs to it to be so affected Wherefore the original cause as it were of the

³ cf HP 1 6.7. ⁴ i.e. when the fat of the living bear becomes abnormally developed. Plin 8.128 expresses his surprise at T.'s credulity 382

CONCERNING ODOURS, 62-64

phenomenon is the special condition of the animal at such periods: for at these times even those males which are not breeding have the smell, and the sterile goats and the females in general. Indeed, though at that particular time the fact that animals are actually breeding is a powerful factor in producing the smell, yet their condition is in itself a cause.

Similar sympathetic behaviour is found in a manner in other things also. Thus wine appears to 'bloom' 1 at the same time as the growing grape, and stored garlic and onions appear to have the most pungent smell at the season when those 2 in the ground are sprouting: however in this case sprouting takes place in the stored vegetables also. And in general any plant whose root is in layers 3 or fleshy becomes active at the season of sprouting, unless it has been completely dried: for it is the force latent in such plants which is stirred into activity. But the most remarkable phenomenon of the kind is what occurs with bears' grease. It makes active growth at the time of the bear's winter sleep 2 and completely fills the vessels in which it is kept.

Of odours as compared with other sense-impressions.

XIV. What can be the reason why Democritus, though he assigns various flavours to the sense of taste, yet does not in like manner assign various smells and colours to the senses to which they belong? According to his system he should have done so. Perhaps the same criticism should apply to all who have dealt with the subject. for they all

in this matter his version (coctas unsorum carnes) adds to the marvel

οί δὲ μάλιστα ταύτης τὰ πάθη λέγουσι καὶ τὰς διαφοράς, ὡς ἐν χρώμασι λευκὸν καὶ μέλαν, καὶ ἐν χυμοῖς γλυκὺ καὶ πικρόν, οὐχ οὕτω δ' ἐν ὀσμαῖς· οὐδὲν γὰρ πλὴν τό τ' εὔοσμον καὶ τὸ κάκοσμον. οὐδ' ἐν ἀπτοῖς· πλείω γὰρ εὐθὺ τὰ ὑποκείμενα, σκληρὸν μαλακὸν τραχὺ λεῖον.

65 'Αλλὰ μᾶλλον ἐν φωναῖς, ὀξὺ καὶ βαρύ. ἔτι δὲ τὰ μὲν μικτὰ τὰ δ' ἄμικτα. ἄμικτοι χυλοὶ οἱ μὲν τῷ μὴ καταμερίζεσθαι ὥστ' ἐξ ἀμφοῖν, οἷον ὕδωρ ἔλαιον φλέγμα αἶμα, ὅλως πᾶν τὸ ἐπινέον ἡ τὸ διαιροῦν, ὥσπερ τὸ ὀξος καὶ τὸ γάλα. τὸ γὰρ τῆ πιέσει καὶ τρίψει μιγνύμενον ἔτερον εἶδος. ἄλλον δὲ τρόπον οἱ μὴ εὐμικτοι πρὸς τὴν χρείαν ἡ καὶ λυμαινόμενοι ἀλλήλους, οἷον ἡ θάλαττα καὶ τὰ νιτρώδη καὶ πικρὰ ὕδατα τοὺς οἴνους καὶ τὰ πότιμα, ἐὰν μὴ εὐθὺς χρῆταί τις.

66 'Οσμαὶ δὲ αἱ μὲν οὕτως ἄμικτοι πλείους καὶ ὥστε καθόλου λαβεῖν αἱ κακώδεις ταῖς κακώδεσι. ὡς δὲ βέλτιόν τι τὸ ἐξ ἀμφοῖν ἔργον εὑρεῖν εἰ

^{1 2} e. taste.

² There seems to be some confusion here, as in the first sentence of the section T complained that colours are not classified The following passage is unusually elliptical, and the text is probably defective T.'s complaint seems to be that sense-experiences in general have been inadequately classified (cf. 2); and in 66 foll. he specially mentions smells.

CONCERNING ODOURS, 64-66

either give the various qualities and distinguish the experiences of this sense lalone or at least comparatively neglect the others: thus with colours they distinguish white and black, and with flavours sweet and bitter, yet they make no corresponding classification of smells, but merely class them as 'pleasant' or 'unpleasant' So too they fail to distinguish different experiences of the sense of touch, whereas several belong immediately to this sense, as hardness, softness, roughness, smoothness.

In sounds still more are there differences, as that between shill and deep. Again some sense-experiences are simple, some compound. Flavours are simple first in the sense that they cannot be resolved into two components 3: instances are water oil phlegm blood,4 and in general anything which floats, like milk,5 or which causes separation, like vinegar. (Where mixture can be produced by pressure or crushing, it is quite a different matter). Secondly there are flavours which do not readily combine in another sense, namely for human use, or which even spoil one another if they are mixed, as sea-water, or water with soda in it or which has a bitter taste: these spoil wines or other things that are good to drink, unless they are taken at once

Now the odours which in this sense do not combine are numerous, and, speaking generally, it is the pleasant odours which do not combine with the unpleasant ones. It would indeed be difficult, if not impossible, to find a case in which mixture is an

Τὰ γὰρ διαπάσματα ὅσφ ἃν ἢ πλειόνων ἀμείνω. ποιεῖ δὲ καὶ ἡ τοῦ οἴνου κατάμιξις καὶ μύρα ἔνια καὶ θυμιάματα εὐοσμότερα, καθάπερ τὴν σμύρναν. δοκεῖ δὲ καὶ τὸ μύρον ἡδύνειν τοὺς οἴνους, διὸ καὶ οἱ μὲν ἐν τῇ οἰνοποιία μιγνύουσιν οἱ δὲ οὕτως ἐπιχεόμενον πίνουσιν. οὐκ ἄλογον δὲ συνέγγυς τὰς αἰσθήσεις οὔσας καὶ ἐν τοῖς αὐτοῖς ὑποκειμένοις ἔχειν τινὰ ἐπικοινωνίαν ὡς γὰρ ἐπὶ τὸ πᾶν οὐδεἰς οὔτε χυλὸς ἄοσμος οὔτε ὀσμὴ ἄχυλος τοῦτο δὲ ὅτι οὐδεμία ἐκ μὴ ἔχοντος χυλόν.

68 Συμβαίνει δὲ καὶ μεταβάλλειν τὰς ὀσμὰς ἄμα τοῖς χυλοῖς, ὅσπερ ἐπί τε τοῦ οἴνου καὶ ἐπὶ καρπῶν τινῶν· ἐνίων δὲ καὶ ἐν τῷ ἄνθει πρότερον, ὅσπερ τῶν βοτρύων· ἡ δὲ τῶν μύρων εἰς ἀκμὴν μόνον καὶ οἴον φθίσιν. μετακινοῦνται δ' ἐν ταῖς ἐτείαις ὥραις πάνθ' ὡς εἰπεῖν, μάλιστα δὲ τὰ

1 I have inserted οὐχ, suggested by Sch

² Like Sch I fail to see the relevance of this remark. The sense required is 'while the fruit is still on the tree'.

CONCERNING ODOURS, 66-68

improvement to the odour: in fact one might say that not¹ every combination of one fragrant thing with another will produce such a quality, but though sometimes the effect of such mixture is an improvement, sometimes it may be the reverse, as in the case of perfumes: for while the effect of some admixtures is to remove excessive strength or harshness, in other cases the odour is enfeebled and made, as it were, insipid. With solids however all combinations are possible.

In fact powders are the better, the more ingredients they have Also the admixture of wine makes some perfumes and things used for incense more fragrant, for instance myrrh. It appears also that perfume sweetens wines, wherefore some add it in the manufacture, some put it in at the time of drinking. Nor is it unnatural that between these senses, since they are akin and are affected by the same objects, there should be a sort of reciprocity: for, to speak generally, no taste is unaccompanied by smell and no smell is unaccompanied by taste, the reason being that a thing which has no taste produces no smell.

It is also the case that smells actually change along with tastes, for instance in wine and certain fruits. And in some cases, as with grapes, the change takes place earlier, during 2 the flowering period while in perfumes it occurs only when they have reached their best and are about, as it were, to go off. Almost all perfumes undergo alteration at certain seasons of the year, and this applies specially to the weakest kinds: in the case of those made

possibly $\partial \nu\theta\epsilon\hat{\imath}$ has got in from below and we should read $\kappa a\rho\pi\hat{\varphi}$.

CONCERNING WEATHER SIGNS

Introductory general principles.

I. The signs of rain wind storm and fair weather we have described so far as was attainable, partly from our own observation, partly from the information of persons of credit.

Now those signs which belong to the setting or rising of the heavenly bodies must be learnt from astronomy. Their settings are twofold, since they may be said to have set when they become invisible. And this occurs when the star sets along with the sun, and also when it sets at sunrise. In like manner their risings are twofold: there is the morning rising, when the star rises before the sun, and there is the rising at nightfall, when it rises at sunset.

Now what are called the risings of Arcturus occur at both times, his winter rising being at nightfall and his autumn rising at dawn. But the rising of most of the familiar constellations is at dawn, for instance, the Pleiad Otion and the Dog

Of the remaining signs some belong specially to all such lands as contain high mountains and valleys, specially where such mountains extend down to the sea: for, when the winds begin to blow, the clouds are thrown against such places, and, when the winds

¹ Or, perhaps, 'from my astronomical works.'

ἀντιμεθίστανται καὶ ὑγρότερα γινόμενα διὰ βάρος εἰς τὰ κοῖλα συγκαθίζει. διὸ δεῖ προσέχειν οὖ ἄν τις ἱδρυμένος ἢ. ἔστι γὰρ ἀεί τινα λαβεῖν τοιοῦτον γνώμονα καὶ ἔστι σαφέστατα σημεῖα τὰ ἀπὸ τούτων.

Διὸ καὶ ἀγαθοὶ γεγένηνται κατὰ τόπους τινὰς ἀστρονόμοι ἔνιοι, οἶον Ματρικέτας ἐν Μηθύμνη ἀπὸ τοῦ Λεπετύμνου, καὶ Κλεόστρατος ἐν Τενέδφ ἀπὸ τῆς Ἰδης, καὶ Φαεινὸς ᾿Αθήνησιν ἀπὸ τοῦ Λυκαβηττοῦ τὰ περὶ τὰς τροπὰς συνείδε, παρ' οὖ Μέτων ἀκούσας τὸν τοῦ ἐνὸς δέοντα εἴκοσιν ἐνιαυτῶν <κύκλον> συνέταξεν. ἢν δὲ ὁ μὲν Φαεινὸς μέτοικος ᾿Αθήνησιν ὁ δὲ Μέτων ᾿Αθηναῖος. καὶ ἄλλοι δὲ τὸν τρόπον τοῦτον ἠστρολόγησαν.

² Plin 5 140. Of Matriketas nothing is known.

³ Said (Plin 2 31) to have first recognised the Ram and the Archer. Athen. (7. 278 b) connects him with Tenedos.

CONCERNING WEATHER SIGNS, 3-6

change, the clouds also change 1 and take a contrary direction, and, as they become laden with moisture, they settle down in the hollows because of their weight. Wherefore good heed must be taken to the local conditions of the region in which one is placed. It is indeed always possible to find such an observer, and the signs learnt from such persons are the most trustworthy.

Thus in some parts have been found good astronomers: for instance, ² Matriketas at Methymna observed the solstices from Mount Lepetymnos, Cleostratus ³ in Tenedos from Mount Ida, Phaeinos at Athens from Mount Lycabettus: Meton, who made the cycle ⁴ of nineteen years, was the pupil of the last-named. Phaeinos was a resident alien at Athens, while Meton was an Athenian. Others also have made astronomical observations in like manner.

Again there are other signs which are taken from domestic animals or from certain other quarters and happenings. Most important of all are the 's signs taken from the sun and moon: for the moon is as it were a nocturnal sun. Wherefore also the meetings of the months are stormy, because the moon's light fails from the fourth day from the end of one month to the fourth day from the beginning of the next, there is therefore a failure of the moon corresponding to the failure of the sun. Wherefore anyone who desires to forecast the weather must pay especial heed to the character of the risings and settings of these luminaries.

⁵ τὰ seems necessary. ⁹ κύρια τὰ.

⁴ Called 'the great year': cf. Aelian V.H 10. 7. τδν τοῦ ἐνὸς δέοντα εἴκοσιν ἐνιαυτῶν <κύκλον> conj. Sch. ἐνιαυτὸν conj W

Πρώτον μὲν οὖν ληπτέον ὅτι αἱ διχοτομίαι διορίζουσι τὰς ὅρας, ὅστε ἐπὶ τούτων δεῖ ἀθρεῖν καὶ ἐνιαυτὸν καὶ μῆνα καὶ ἡμέραν. διχοτομεῖ δὲ τὸν μὲν ἐνιαυτὸν Πλειάς τε δυομένη καὶ ἀνατέλλουσα· ἀπὸ γὰρ δύσεως μέχρι ἀνατολῆς τὸ ἤμισυ τοῦ ἐνιαυτοῦ ἐστίν. ὅστε δίχα τέμνεται ὁ τ πᾶς χρόνος. ὁμοίως δὲ καὶ αἱ τροπαὶ καὶ ἰσημερίαι ποιοῦσιν. οἵα τις ἂν οὖν ἢ κατάστασις τοῦ ἀέρος Πλειάδος δυομένης, οὕτω ἔχει ὡς ἐπὶ τὸ πολὺ μέχρι τροπῶν, κὰν μεταβάλλη, μετὰ τροπάς· ἐὰν δὲ μὴ μεταβάλλη, διέχει ἔως ἰσημερίας, κἀκείθεν ὡσαύτως μέχρι Πλειάδος, καὶ ἀπὸ ταύτης μέχρι τροπῶν θερινῶν, καὶ ἐντεῦθεν μέχρι ἰσημερίας, καὶ ἀπὸ ἰσημερίας μέχρι Πλειάδος δύσεως.

'Ως δ' αὕτως ἔχει καὶ περὶ τὸν μῆνα ἔκαστον διχοτομοῦσι γὰρ αἵ τε πανσέληνοι καὶ αἱ ὀγδόαι καὶ αἱ τετράδες, ὥστε ἀπὸ νουμηνίας ὡς ἀπ' ἀρχῆς δεῖ σκοπεῖν. μεταβάλλει γὰρ ὡς ἐπὶ τὸ πολὺ ἐν τῆ τετράδι, ἐὰν δὲ μή, ἐν τῆ ὀγδόη, εἰ δὲ μή, πανσελήνω ἀπὸ δὲ πανσελήνου εἰς ὀγδόην φθίνοντος, καὶ ἀπὸ ταύτης εἰς τετράδα, ἀπὸ δὲ τετράδος εἰς τὴν νουμηνίαν.

9 Ως δ' αὕτως καὶ ἐπὶ τῆς ἡμέρας ἔχουσιν αἱ μεταβολαὶ ὡς ἐπὶ τὸ πολύ. ἀνατολὴ γὰρ καὶ πρωὶ καὶ μεσημβρία καὶ δείλη καὶ δύσις, καὶ τὰ τῆς νυκτὸς μέρη τὰ ἀνάλογα ταὐτὸ ποιεῖ τοῖς εἰρημένοις περὶ πνευμάτων καὶ χειμώνος καὶ εὐδίας. μάλιστα γὰρ ἐὰν μέλλη μεταβάλλειν, ἐν

CONCERNING WEATHER SIGNS, 6-9

Now the first point to be seized is that the various periods are all divided in half, so that one's study of the year the month or the day should take account of these divisions. The year is divided in half by the setting and rising of the Pleiad 1. for from the setting to the rising is a half year. So that to begin with the whole period is divided into halves: and a like division is effected by the solstices and equinoxes. From which it follows that, whatever is the condition of the atmosphere when the Pleiad sets, that it continues in general to be till the winter solstice, and, if it does change, the change only takes place after the solstice · while, if it does not change, it continues the same till the spring equinox: the same principle holds good from that time to the rising of the Pleiad, from that again to the summer solstice, from that again to the autumnal equinox, and from that to the setting of the Pleiad.

So too is it with each month; the full moon and the eighth 2 and the fourth days make divisions into halves, so that one should make the new moon the starting-point of one's survey. A change most often takes place on the fourth day, or, failing that, on the eighth, or, failing that, at the full moon; after that the periods are from the full moon to the eighth day from the end of the month, from that to the fourth day from the end, and from that to the new moon.

The divisions of the day follow in general the same principle, there is the sunrise, the mid-morning, noon, mid-afternoon, and sunset; and the corresponding divisions of the night have like effects in the matter of winds storms and fair weather; that is to say, if there is to be a change, it will generally

¹ Plin. 18 280 ² cf Arat. 73 f.

ταις διχοτομίαις μεταβάλλει. καθόλου μὲν οὖι τὰς ὅρας οὕτω δεί παρατηρείν, καθ᾽ ἔκαστα δὲ τῶν σημείων κατὰ τὸν ὑπογεγραμμένον τρόπον.

10 "Υδάτος μὲν οὖν σημεῖα τὰ τοἰαῦτα δοκεῖ εἶναι. ἐναργέστατον μὲν οὖν τὸ ἑωθινόν, ὅταν πρὸ ἡλίου ἀνατολῆς φαίνηται ἐπιφοινίσσον σημεῖον ἡ γὰρ αὐθημερινὸν ἐπισημαίνει ἡ τριῶν ἡμερῶν ὡς ἐπὶ τὸ πολύ. δηλοῖ δὲ καὶ τὰ ἄλλα σημεῖα· ἐὰν γὰρ μὴ πρότερον, τριταῖα μάλιστα σημαίνει τὸ ἐπιφοινίσσον καὶ δύνοντος, ἡττον δὲ ἡ τὸ ἑωθινοῦ.

Καὶ ἐὰν δύνη χειμῶνος ἢ ἔαρος εἰς νεφέλιον, τριῶν ἡμερῶν ὡς τὰ πολλὰ ἐπισημαίνει. καὶ ἐὰν ράβδοι νοτόθεν, ταὐτὰ δὲ ταῦτα βορρᾶθεν γινόμενα ἀσθενέστερα. καὶ ἐὰν ἀνίσχων μέλαν σημεῖον ἴσχη, καὶ ἐὰν ἐκ νεφελῶν <ἀν>έχη, ὑδατικόν, καὶ ἐὰν ἀκτῖνες ἀνίσχοντος ἀνατείνωσι πρὶν ἀνατεῖλαι, κοινὸν ὕδατος σημεῖον καὶ ἀνέμου. καὶ ἐὰν καταφερομένου τοῦ ἡλίου ὑφίστηται νέφος, ὑφ' οὖ ἐὰν σχίζωνται αἱ ἀκτῖνες, χειμερινὸν τὸ σημεῖον. καὶ ὅταν καυματίας δύηται καὶ ἀνατέλλη, ἐὰν μὴ ἄνεμος γένηται, ὕδατος τὸ σημεῖον.

12 Τὰ αὐτὰ δὲ σημαίνει καὶ σελήνη πανσελήνω ἀνίσχουσα, ἀσθενέστερα δὲ ὁ μείς. ἐὰν μὲν ἢ πυρώδης, πυευματώδη σημαίνει τὸν μῆνα, ἐὰν δὲ ζοφώδης, ὑδατώδη· σημαίνει δὲ ὅτι ἂν σημαίνη

τριταίος ων δ μείς.

 $^{^1}$ τὸν ὑπογ. τρόπον seems to mean the same as the Aristotelian τὸν ὑφηγημένον τρόπον, e g Eth Nic 2 7 9 The rendering 'the following method' would however suit the context.

CONCERNING WEATHER SIGNS, 9-12

occur at one of these divisions. In general therefore one should observe the periods in the way indicated, though as to particular signs we must follow the accepted method.¹

The signs of rain.

Now the signs of rain appear to be as follows: most unmistakable is that which occurs at dawn, when the sky has a reddish appearance before sunrise, for this usually indicates rain within three days, if not on that very day. Other signs point the same way: thus a red sky at sunset indicates rain within three days, if not before, though less certainly than a red sky at dawn.

Again, if the sun sets in a cloud in winter or spring, this generally indicates rain within three days. So too, if there are streaks of light from the south, while, if these are seen in the north, it is a less certain sign. Again, if the sun when it rises has a black mark, or if it rises 2 out of clouds, it is a sign of rain; while, if at sunrise there are rays 3 shooting out before the actual rising, it is a sign of rain and also of wind. Again if, as the sun sinks, a cloud forms below it and this breaks up its rays, it is a sign of stormy weather. Again, if it sets or rises with a burning heat, and there is no wind, it is a sign of rain.

Moonrise gives similar indications, at the time of full moon: they are less certain when the moon is not full. If the moon looks fiery, it indicates breezy weather for that month, if dusky, wet weather; and, whatever indications the crescent moon gives, are given when it is three days old.

² ἀνέχη conj. Sch ³ Plm 18. 344.

13 'Αστέρες πολλοὶ διάττοντες ὕδατος ἢ πνεύματος, καὶ ὅθεν ἀν διάττωσιν ἐντεῦθεν τὸ πνεῦμα ἢ τὸ ὕδωρ. καὶ ἐἀν ἀκτῖνες ἀθρόαι ἀνίσχωσιν ἀνιόντος ἢ δύνοντος, σημεῖον <ὕδατος>. καὶ ὅταν ἀνίσχοντος τοῦ ἡλίου αἱ αὐγαὶ οἷον ἐκλείποντος χρῶμα ἴσχωσιν, ὕδατος σημεῖον. καὶ ὅταν νεφέλαι πόκοις ἐρίων ὅμοιαι ὧσιν, ὕδωρ σημαίνει. [ὑετοῦ δὲ σημεῖα] πομφόλυγες ἀνιστάμεναι πλείους ἐπὶ τῶν ποταμῶν ὕδωρ σημαίνουσι πολύ. ὡς δ' ἐπὶ τὸ πολὺ ἔρις περὶ λύχνον ἢ διὰ λύχνου διαφαινομένη νότια σημαίνει ΰδατα.

14 Καὶ οἱ μύκητες ἐὰν νότια ἢ, ὕδωρ σημαίνουσι, σημαίνουσι δὲ καὶ ἄνεμον κατὰ λόγον ὡς ἂν ἔχωσι πλήθους καὶ μεγέθους, σμικροὶ δὲ καὶ κεγχρώδεις καὶ λαμπροὶ ὕδωρ καὶ ἄνεμον. καὶ ὅταν χειμῶνος τὴν φλόγα <ὁ λύχνος> ἀπωθῆ διαλιπὼν οἷον πομφόλυγας, ὕδατος σημεῖον, καὶ ἐὰν πηδῶσιν αἱ ἀκτῖνες ἐπ' αὐτόν, καὶ ἐὰν σπιν-

⁸ i e breaks up into small 'grains' (?). cf. 25, 42, 54.

CONCERNING WEATHER SIGNS, 13-15

Many shooting ¹ stars are a sign of rain or wind, and the wind or rain will come from that quarter from which they appear. Again, if at sunrise or sunset the sun's rays appear massed together, it is a sign of rain ². Also it is a sign of rain when at sunrise the rays ³ are coloured as in an eclipse; and also when there are clouds ⁴ like a fleece of wool. The rising of bubbles ⁵ in large numbers on the surface of rivers is a sign of abundant rain. And in general, when a rainbow ⁶ is seen round or through a lamp, it signifies rain from the south.

Again, if the wind is from the south, the snuff⁷ of the lamp-wick indicates rain, it also indicates wind in proportion to its bulk and size: while if the snuff is small, like millet-seed,⁸ and of bright colour, it indicates rain as well as wind. Again, when in winter the lamp rejects ⁹ the flame but catches, as it were, here and there in spurts, it is a sign of rain so also is it, if the rays of light leap up on the lamp, or if there are sparks.

It is a sign of rain or storm when birds which are not aquatic take a bath. It is a sign of rain when a toad takes a bath, and still more so when frogs are vocal. So too is the appearance of the lizard known as 'salamander,' 10 and still more the chirruping of the green frog in a tree. It is a sign of rain when swallows 11 hit the water of the lakes with their belly. It is a sign of storm or rain when the ox

10 cf. de 1gne 60, where it is explained why the salamander

puts fire out

⁹ i.e. refuses to light properly The appearance seems to be that described Verg. *Georg.* 1. 391 (scintillare oleum) In the same passage putres concrescere fungos perhaps illustrates the comparison of the snuff to millet-seed above

¹ Plin 18. 364; Verg. Georg. 1 375.

3 ὑετῶν ὄντων can hardly mean 'while it is raining.'

² Emipoi(hor). Sc. with his wings probably, not, as LS 'croaks.' Plin. (18. 362) seems to have had a fuller text, or to have drawn also on some other authority.

CONCERNING WEATHER SIGNS, 15-18

licks his fore-hoof; if he puts 1 his head up towards the sky and snuffs the air, it is a sign of rain.

It is a sign of rain when a crow puts back its head on a rock which is washed by waves, or when it often dives or hovers over the water. It is a sign of rain if the raven, who is accustomed to make many different sounds, repeats one of these twice quickly and makes a whirning 2 sound and shakes his wings. So too if, during a rainy season, he utters many different sounds, or if he searches for lice perched on an ohve-tree. And if, whether in fair or wet weather, he imitates, as it were, with his voice falling drops, it is a sign of iain. So too is it if iavens or jackdaws fly high and scream 4 like hawks. And, if a raven in fair weather does not utter his accustomed note and makes a whiring with his wings, 5 it is a sign of rain

It is a sign of rain if a hawk perches on a tree, flies right into it and proceeds to search for lice: also, when in summer a number of birds living on an island pack together. If a moderate number collect, it is a good sign for goats and flocks, while if the number is exceedingly large, it portends a severe drought. And in general it is a sign of iain when cocks and hens search for lice, as also when they

make a noise like that of falling rain.

Again it is a sign of rain when a tame 6 duck gets under the eaves and flaps its wings. Also it is a sign of rain when jackdaws and fowls flap their wings whether on a lake or on the sea—like the duck. It

CONCERNING WEATHER SIGNS, 18-21

is a sign of wind or rain when a heron utters his note at early morning: if, as he flies towards the sea, he utters his cry, it is a sign of rain rather than of wind, and in general, if he makes a loud cry, it portends wind

It is a sign of rain or stoim if a chaffinch kept in the house utters its note at dawn. It is also a sign if any pot filled with water causes sparks to fly when it is put on the fire. It is also a sign of rain when a number of millepedes 1 are seen crawling up a wall. A dolphin 2 diving near land and frequently reappearing indicates rain or storm

If the lesser Mount Hymettus, which is called the Dry Hill, has cloud in 3 its hollows, it is a sign of rain: so also is it, if the greater Hymettus has clouds in summer on the top and on the sides: or if the Dry Hymettus has white clouds on the top and on the sides; also if the south-west wind 4 blows at

the equinox.

Thunder in winter and at dawn indicates wind or rather than rain; thunder in summer at midday or in the evening is a sign of rain. If lightning is seen from all sides, it will be a sign of rain or wind, and also if it occurs in the evening. Again, if when the south wind of is blowing at early dawn, there is lightning from the same quarter, it indicates rain or wind. When the west wind is accompanied by lightning from the north, it indicates either storm or rain. Lightning in the evening in summer time indicates rain within three days, if not immediately.

CONCERNING WEATHER SIGNS, 24-26

the temple of Zeus Hellamos in Aegina, usually rain follows. If a great deal of rain falls in winter, the spring is usually dry; if the winter has been dry, the spring is usually wet. When there is much 2 snow in winter, a good season generally follows.

Some say that, if in the embers 3 there is an appearance as of shining hail-stones, it generally prognosticates hail; while, if the appearance is like a number of small shining millet seeds,4 it portends fair weather, if there is wind at the time, but, if there is no wind, rain or wind. It is better both for plants and for animals that rain should come from the north before it comes from the south; it must however be fresh and not briny to the taste. And in general a season 5 in which a north wind prevails is better and healthier than one in which southerly winds prevail. It is a sign of a long winter when sheep or goats have a second 6 breeding season.

The signs of wind.

II. Such then are said to be the signs of rain. The following are signs of wind and breezes ⁷ If the sun rises with a burning heat but does not shine brilliantly, it is a sign of wind. If the sun has a hollow appearance, it is a sign of wind or rain. If it blazes with a burning heat for several days, it portends long-continued drought or wind. If at dawn its rays are parted, some pointing to the north and some

¹ Plin 18 343 suggests that this is the meaning, text perhaps defective of Verg Georg. 1, 445

³ Lit, 'the crescent moon has a northerly character.' ή ἄρω add Furl.

CONCERNING WEATHER SIGNS, 26-29

to the south, while the orb itself is 1 clearly seen between, it is a sign of rain and wind.

Also black spots on the sun or moon indicate rain, red spots wind. Again, if, while a north wind blows, the horns 2 of the crescent moon stand out straight, westerly winds will generally succeed, and the rest of the month will be stormy. When the upper horn of the crescent moon is bent, northerly winds 3 will prevail for that part of the month: when the lower horn is bent, southerly winds will prevail. 4 If however the horns up to the fourth day point straight and have not a graceful bend inwards but round to a circle, it will generally be stormy till the middle of the month. If the moon is dusky, it indicates rain, if fiery, it indicates wind.

It is a sign of rain when gulls and ducks, whether wild or tame, plunge under water, a sign of wind when they flap their wings. Wherever the bird called kepphos flies during a calm, it is a sign of coming wind. If sparrows in winter begin to be clamorous at evening, it is a sign of a coming change or of a fall of rain. A heron flying from the sea and screaming is a sign that a breeze is coming. so is it in general a sign of wind when he screams loudly.

A dog rolling on the ground is a sign of violent wind A number of cobwebs 5 in motion portends wind or storm. The ebb-tide indicates a north wind, the flowing tide a wind from the south. For, if the flowing tide sets from the north, there is a change to the south, and if an ebb-tide comes from the south, there is a change to the north. It is

⁴ of 38, Plin. 18 347; Verg Georg 1 428; the English sign, 'the young moon with the old moon in her arm.'

CONCERNING WEATHER SIGNS, 29-31

a sign of wind when the sea 1 has a swell or promontories moan or there is loud noise on the beach. Now the north wind has less force as it ceases to blow, the south wind as it begins. A mock sun, in whatever quarter it appears, indicates rain or wind.

The fifteenth 2 day after the winter solstice is generally marked by southerly winds. If there is a northerly wind, everything gets dried 3 up, if a southerly, there is abundant moisture. If, while a south wind is blowing, glued articles make a cracking sound, it indicates a change to a south 4 wind. If the feet swell, there will be a change to a south wind. This also sometimes indicates a hurricane. So too does it, if a man has a shooting pain in the right foot. The behaviour 6 of the hedgehog is also significant: this animal makes two holes wherever he lives, one towards the north, the other towards the south: now whichever hole he blocks up, it indicates wind from that quarter, and, if he closes both, it indicates violent wind

If a mountain..., 7 it indicates wind from the north. If at sea during a wind there is a sudden calm, it indicates a change or an increase of wind. If promontones 8 seem to stand high out of the sea, or a single island looks like several, it indicates a change to south wind. If the land looks black from the sea, it indicates a north wind, 9 if white, a south wind. A halo 10 about the moon signifies wind more certainly than a halo about the sun. but in either case, if there is a break in the halo, it indicates wind, which will come from the quarter in which the break is. If the sky is overcast in whatever quarter

 $^{^1}$ κηλάδες, i ε a 'mackerel sky' (?) The word seems to occur nowhere else except in Hesych , who renders ἄνυδρος derivation obscure. It should probably be read in §51 for κοιλάδες. 2 Plin. 18. 354

³ αν Sc. εἶναι, which perhaps should be added.

CONCERNING WEATHER SIGNS, 31-34

the sun is first seen, there will be wind from that quarter. Light¹ clouds in summer-time indicate wind.

If hightning comes from all sides, it indicates rain, and from any quarter from which the flashes come in quick succession there will be wind. In summer? from whatever quarter lightning and thunder come, there will be violent winds: if the flashes are brilliant and startling, the wind will come sooner and be more violent; if they are of gentler character and come at longer intervals, the wind will get up gradually. In winter and autumn however the reverse happens, for the lightning causes the wind to cease: and, the more violent the lightning and thunder are, the more will the wind be reduced. In spring I consider that the indications would? not so invariably have the same meaning,—and this is also true of winter.

If, while a south wind is blowing, there comes lightning from the north, the wind ceases. If there is lightning at dawn, the wind generally ceases on the third day: other winds than a south wind however do not cease till the fifth seventh or ninth day, though a wind which got up in the afternoon will cease sooner. A north 4 wind generally ceases in an odd, a south wind in an even number of days. Winds get up at sunrise or moonrise. If the rising sun or moon have caused the wind to cease, presently 5 it gets up again with more force, and winds which begin to blow in the day-time last longer and are stronger than those which begin at night.

If periodic winds have been blowing for a long time, and a windy autumn follows, the winter is windless: if however the contrary happens, the character

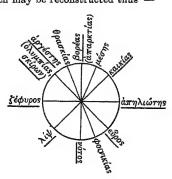

⁴ Plin. 2. 129.

⁵ So Furl, renders : W. mserts μη after σελήνη.

πρὸς κορυφης ὅρους ὁπόθεν ἃν νεφέλη μηκύνηται, ταύτη ἄνεμος πνευσείται. αἱ νεφέλαι ἐκ τῶν ὅπισθεν προσίζουσαι καὶ ὅπισθεν πνευσοῦνται. ᾿Αθως μέσος διεζευγμένος νότιος, καὶ ὅλως τὰ ὅρη διεζωσμένα νότια ὡς τὰ πολλά. οἱ κομηται ἀστέρες ὡς τὰ πολλὰ πνεύματα σημαίνουσιν, ἐὰν δὲ πολλοί, καὶ αὐχμόν. μετὰ χιόνα νότος, μετὰ πάχνην βορέας εἴωθε πνεῦν. μὐκητες ἐπὶ λύχνου νότιον πνεῦμα ἡ ὕδωρ σημαίνουσιν.

 cf 14, 25, 42, 54.
 The 'figure' (giving points of the compass) has not been preserved. Arist Meteor 2 6 describes such a figure (ὑπογραφή), which may be reconstructed thus—

CONCERNING WEATHER SIGNS, 34-35

of winter is also reversed. From whatever quarter cloud streams out from a mountain peak, wind will blow in the direction thus indicated. Clouds which cling to the back of the mountain will also produce wind from the back of it. If there is a girdle 1 of cloud half way up Mount Athos, and if mountains in general wear such a girdle, there will generally follow a southerly wind. Comets 2 usually indicate wind, and, if there are many of them, drought is also indicated. After snow 3 a south wind, after hoar-frost a north wind generally blows. Snuff 4 in a lamp indicates wind or rain from the south.

The points from which the winds come are as they are given in the figure.⁵ The winds which most often come on the top of other winds while these are still blowing are the north wind (aparktias), the north-north-east and the north-west. When however the winds are not dispersed by one another but die down of their own accord, they change to the next winds on the figure, reckoning from left

Arist. does not seem to distinguish βορέαs and ἀπαρκτίαs· his θρακίαs is T.'s θρακίαs his eight principal winds (underlined in diagram) correspond to those represented on the famous Tower of the Winds at Athens, built about two hundred years later.

⁶ cf. Arist lc. 7 Plin 2. 128.

νους ἐπὶ δεξιά, ὅσπερ ἡ τοῦ ἡλίου ἔχει φορά. ὁ νότος ἀρχόμενος ξηρὸς τελευτῶν δὲ ὑγρός. καὶ ὁ εῦρος. ὁ δ' ἀπηλιώτης ἀπὸ ἀνατολῆς ἰσημερινῆς ὑδατώδης. διὰ λεπτῶν δὲ ἄγει τὰ ὕδατα.

36 Υγρολ δὲ μάλιστα ὅ τε καικίας καὶ λίψ· χαλαζώδης δ᾽ ἀπαρκτίας καὶ θρακίας καὶ ἀρ-γέστης· νιφετώδης δὲ ὅ τε μέσης [ἢ βορέας] καὶ ἀπαρκτίας· καυματώδης δὲ νότος καὶ ζέφυρος καὶ εὖρος· οἱ μὲν οἶς ἂν ἐκ πελάγους προσπίπτωσιν, οἱ δὲ οἶς ἂν διὰ γῆς. δασύνουσι δ᾽ οὐρανὸν νέφεσι καὶ καλύπτουσι καικίας μάλιστα εἶτα λίψ. καὶ οἱ μὲν ἄλλοι ἄνεμοι ἀφ᾽ ἐαυτῶν τὰ νέφη ἀθοῦσι, καικίας δὲ μόνος πνέων εἰς ἑαυτόν. αἴθριοι δὲ μάλιστα θρακίας καὶ ἀργέστης καὶ τῶν λοιπῶν ἀπαρκτίας· ἐκνεφίαι δὲ μάλιστα ὅ τε ἀπαρκτίας καὶ ὁ θρακίας καὶ ὁ ἀργέστης.

 ħ is difficult to account for otherwise See diagram,
 2 Plm. 18 360.

CONCERNING WEATHER SIGNS, 35-37

to right according to the course of the sun. When the south wind begins to blow, it is dry, but it becomes wet before it ceases: so too does the southeast wind. The east wind, coming from the quarter where the sun rises at the equinox, is wet: but it

brings the rain in light showers

The north-east and south-west are the wettest winds; the north the north-north-east and the northeast bring hail; snow comes with the north-northeast 1 and north. The south, the west, and the south-east winds bring heat. Some of these have their effect on places which they strike as they come from the sea, others on places which they visit as they come over land. The winds which more than any others make the sky thick with cloud and completely cover it are the north-east and the southwest, especially the former While the other winds repel the clouds from themselves, the north-east alone attracts them as it blows. Those winds which chiefly bring a clear sky are the north-north-west and the north-west, and next after them the north. Those which most have the character of a hurricane are the north the north-north-west and the northwest.

They acquire this character when they fall upon one another as they blow, especially in autumn, but to some extent in spring. Those which are accompanied by lightning are the north-north-west the northwest the north and the north-north-east. If at sea 2 a quantity of down is seen blown along, which has come from thistles, it indicates that there will be a great wind Wind 3 may be expected from any quarter in which a number of shooting stars are

CONCERNING WEATHER SIGNS, 37-40

seen. If these appear in every quarter alike, it indicates many winds.

Such then are the signs of winds

III. The following are signs of storm. The sun becoming obscured as it sinks indicates storm. And, according as its orb is divided as it sets, so the succeeding days turn out; for instance, a third or a half of the orb may remain visible. If the horns of the moon point straight up till the fourth day, and if it rounds to a circle, it will be stormy till the middle of the month. If cranes fly early and in flocks, it will be an early winter; if they fly late and for a long time, it will be a late winter; and, if they wheel as they fly, it indicates stormy weather

*It is a sign of storm when geese make more clamour than usual or fight for their food; so too is it when a sparrow or chaffinch twitters at dawn. It indicates a storm when the goldcrest goes into holes and hides itself; so also when the redbreast does the same. It is a sign of storm when the crow caws twice in quick succession and then a third time, also when the crow or raven or jackdaw makes its call late. It is a sign of a great storm when a white sparrow or swallow is seen, or a white specimen of any other bird which is not usually white, even as the appearance of a large number of such birds of a dark colour signifies rain.

It is also an indication of storm when birds flee from the sea. A chaffinch uttering its note in an inhabited house is a sign of storm. All the signs which indicate rain bring stormy weather, that is to say, snow and storm, if not rain. If the raven utters

So Arat. 343 f. interprets.

CONCERNING WEATHER SIGNS, 42-45

and if these in fine weather appear in a circle round "the flame, it is a sign of snow.

If the 'Ass's Manger 1' shrinks in size and becomes dark, it is a sign of storm; also if there is vivid lightning which does not remain in the same quarter. If at the setting of the Pleiad there is lightning over Parnes Brilessus and Hymettus—when it appears over all three mountains, it indicates a great storm; when over the two lesser heights, a less violent storm; when over Parnes alone, fine weather. Again, if during a storm a long cloud stretches over Hymettus, it signifies that the storm will increase in force. It is a sign of storm when Athos Olympus and mountain-peaks in general are covered with clouds. If during fine weather a cloud appears in the sky stretching a long way and torn to shieds, stormy weather will continue.

If the autumn is unusually fine, the succeeding spring is generally cold. If winter begins early, it ends early and there is a fair spring; if the reverse, spring will also be late. If the winter is wet, the spring will be dry, if the winter is dry, the spring will be fair. If the late summer is satisfactory, the sheep will generally suffer from hunger. If the spring and summer are cold, the late summer and autumn 2 will be stifling hot and windless

If the kermes-oak if fruits well, there follows a long succession of storms If a cloud stands upright on a mountain-peak, it indicates storm; whence Archilochus' lines "Mark you,4 Glaucus; deep ocean

aselli appellatae, exiguum inter illas spatium obtinente nubecula, quam praesepia appellant 2 75 add Sch 3 cf 49.

4 A comparison of war to stormy weather. Quoted also

by Plut. de Superstitione, 72, and by Heraclides, Allegoriae Homericae, 4. In both citations the Greek is corrupt.

ταράσσεται Πόντος ἀμφὶ δ' ἄκρα <Γυρῶν> ὀρθὸν ίσταται νέφος Σήμα χειμώνος." έαν δ' όμόχρων" ή ύμένι λευκφ, χειμέριου. ὅταν ἐστώτων νεφῶν ἔτερα ἐπιφέρηται τὰ δ΄ ἠρεμή, χειμέρια. 46 < Ὁ ἥλιος> ἐὰν χειμώνος διαλάμψας πάλιν

άποκρυφθή καὶ τοῦτο ποιήση δὶς ἡ τρίς, ἡμέρα χειμέριος δίεισιν. ό τοῦ Ερμοῦ ἀστηρ χειμῶνος μεν φαινόμενος ψύχη σημαίνει θέρους δε καθμα. όταν μέλιτται μη ἀποπέτωνται μακράν ἀλλ' αὐτοῦ ἐν τῆ εὐδίᾳ πέτωνται, χειμῶνα ἐσόμενον σημαίνει. λύκος ώρυόμενος χειμώνα σημαίνει διὰ τριῶν ἡμερῶν. λύκος ὅταν πρὸς τὰ ἔργα όρμα ή εἴσω χειμῶνος ὥρα, χειμῶνα σημαίνει εύθύς.

"Εστι δε σημείον χειμώνων μεγάλων καὶ όμβρων καὶ ὅταν γένωνται ἐν τῷ μετοπώρῳ πολλοὶ σφηκες, και όταν δρνιθες λευκοί προς τὰ ἐργάσιμα πλησιάζωσι, και όλως τὰ άγρια θηρία ἐὰν πρὸς τὰ ἐργάσιμα, βόρειον καὶ χειμῶνος μέγεθος σημαίνει. της Πάρνηθος έὰν τὰ πρὸς ζέφυρον άνεμον καὶ τὰ πρὸς Φύλης φράττηται νέφεσι βορείων όντων, χειμέριον τὸ σημείον.

"Όταν πνίγη γίνηται ἰσχυρά, ὡς τὰ πολλὰ άνταποδίδωσι καὶ γίνεται χειμών ἰσχυρός. ἐὰν ύδατα ἐαρινὰ πολλὰ γένηται, καύματα ἰσχυρὰ έν τοις πεδινοίς και κοίλοις γίνεται. δεί οθν την άρχην όραν. ἐὰν τὸ μετόπωρον εὐδιεινὸν γίνηται

¹ Γυρών. γυροῦν W. Heraclides gives γυρεδν, Plut γυρεῦον; but one MS. of Plut gives γύρων with a marginal gloss 'sc. πετρών,' which suggests that the word is a proper name Od. 4. 500 mentions the Γύραι (i e the 'round-backed rocks')

CONCERNING WEATHER SIGNS, 45-48

is now stirred up with waves, and about the heights of the Gyrae 1 there rises a cloud erect, the sign of storm." If the clouds are of uniform colour, like 2 a white membrane, it is a sign of storm. When, as some clouds are motionless, others move towards them while they remain at rest, it is a sign of storm.

If the sun in winter after gleaming out is again obscured, and this is repeated two or three times, it will be stormy all day. If the star Hermes appears in winter, it indicates cold, if in summer, heat. When in fine weather bees do not fly 3 long distances, but fly about where they are, it indicates that there will be a storm. The howling of a wolf indicates a storm within three days. When a wolf approaches or enters cultivated ground in the season of winter, it indicates that a storm will come immediately.

It is also a sign of great storms and heavy rain when many wasps appear in autumn, or when white birds approach cultivated lands; and in general when wild creatures approach such lands, it indicates a north wind and a severe storm. If the western side of Parnes and the side towards Phyle are blocked with clouds during a north wind, it is a sign of storm.

When there is severe heat, generally there is compensation and a severe winter follows. If there is much rain in spring, it is followed by severe heat in low-lying districts and valleys; so that one should mark how the season begins. If the autumn is where Alas Olleus perished. The word is missing in the MSS.

 $^{^{2}}$ δμοΐον has perhaps dropped out after δμόχρων $\hat{\eta}$; the adjective seems to agree with νέφος

exceedingly fine, generally the spring is cold: if the spring is late and cold, the summer goes on late and

the 1 autumn is usually scorching hot.

When the kermes-oak ² fruits exceedingly well, it generally indicates a severe winter, and sometimes they say that this sign is followed by droughts. If one takes a mole³ and puts it in a tub, the bottom⁴ of which has been covered with clay, it indicates by the sounds which it utters wind or fine weather. There is also the sign of storm which is popularly recognized everywhere, namely when mice fight for the possession of chaff and carry it about.

The signs of fair weather.

IV. The following are signs of fair weather. ⁵ If the sun rises brilliant but without scorching heat and without showing any special sign in his orb, it indicates fair weather. The same may be said of the moon when it is full. If in winter that part of the sky into which the sun goes down is clear, it is a sign of fair weather, unless on the pieceding days that part has not been clear, though it was clear above the horizon: in that case the prospect is uncertain. It is also a sign of fair weather, if during stormy conditions that part of the sky into which the sun sets is clear, and also if, in winter at the time of setting, the sun has a pale colour

Again, it indicates fair weather if the outline of the moon on the third day is bright; also if the 'Ass's 6 Manger' is clear and bright. If the halo 7 forms and disappears evenly, it is a sign of fair

tration, which is the more convincing of the creatures suggested ⁵ Plin 18 312 ⁶ of 23, 43.

⁴ Plin 18 362.

⁵ ἐν χειμῶνι ? 'in winter.' The same ambiguity occurs in many places · the sense seems fixed here by the next sentence

CONCERNING WEATHER SIGNS, 51-53

weather. Light 1 clouds in winter are a sign of fine weather. It is a sign of fine weather when Olympus Athos and in general the mountains which give signs have their tops 2 clear: so too is it, when clouds encompass them at the sea-level. 3 Also when after rain the clouds have a bronze colour towards sundown: in that case there will generally be fine weather the next day.

When there is mist, little or no rain follows. When cranes take flight and do not come back, it is a sign of fair weather: for they do not do so till they see a clear sky before them as they fly. It is a sign of fair weather when during a storm a nowl makes a low hoot, or at night during a storm it utters a low sound. If the sea-owl utters its note during a storm, it indicates fair weather, if during fair weather, it indicates a storm. It is a sign of fair weather, it indicates a storm. It is a sign of fair weather if a solitary raven makes a low croak, and, after croaking three times, repeats the sound again and again.

If the crow caws thrice directly the dawn appears, it indicates fair weather, as also if it makes a low note in the evening during a storm. It is a sign of fair weather if a goldcrest flies out abroad from a hole or from a hedge or from its nest. Again, if during a storm from the north there is a white gleam from that quarter, while in the south a solid mass of cloud has formed, it generally signifies a change to fair weather. Again when the north wind (Boreas) as it begins to blow violently stirs up

a number of clouds, it indicates fair weather.

 $^{^{6}}$ I have marked a lacuna \cdot the answer to $\mu \grave{\epsilon} \nu$ is missing, presumably a statement about the significance of more than one raven of Verg. Georg. 1 410

54 Πρόβατα ὀψὲ ὀχευόμενα εὐδιεινὸν ἀποτελοῦσιο τὸ σημεῖον. καὶ βοῦς ἐπὶ τὸ ἀρίστερον ἰσχίον κατακλινόμενος εὐδίαν σημαίνει καὶ κύων ὡσαύτως ἐπὶ δεξιὸν δὲ χειμῶνα. τέττιγες πολλοὶ γινόμενοι νοσῶδες τὸ ἔτος σημαίνουσι. λύχνος χειμῶνος καιόμενος ἡσυχαῖος εὐδίαν σημαίνει. καὶ ἐὰν ἐπ' ἄκρφ οἷον κέγχρους ἔχῃ λαμπράς καὶ ἐὰν ἐν κύκλφ τὴν μύξαν περιγράφῃ λαμπρὰ γραμμή.

56 Λέγεται δὲ καὶ τοιάδε σημεῖα ὅλων τε τῶν ἐνιαυτῶν γίνεσθαι καὶ τῶν μορίων. ἐὰν ἀρχομένου τοῦ χειμῶνος ζόφος ἢ καὶ καύματα γίνηται καὶ ταῦτα ἄνευ ὕδατος ὑπ' ἀνέμων διαλυθἢ, πρὸς τὸ ἔαρ σημαίνει χάλαζαν ἐσομένην καὶ ἐὰν μετὰ τὴν ἐαρινὴν ἰσημερίαν ὁμίχλαι πίπτωσι, πνεύματα καὶ ἀνέμους σημαίνουσιν εἰς ἔβδομον μῆνα ἀμφοτέρων ἀριθμουμένων. ὅσαι μὲν ἄμα μηνοειδεῖ τἢ σελήνη πίπτουσιν, αὖται μὲν πνεύματα σημαίνουσιν εἰς ἐκεῖνον τὸν χρόνον, ὅσαι δ᾽ ἀμφικύρτου οὖσης τῆς σελήνης ὕδατα. καὶ ὅσφ

CONCERNING WEATHER SIGNS, 54-56

When sheep begin to breed late, it is a sign which fulfils itself in fair weather. So is it when an ox lies 1 on his left side, and also when a dog does the same. If they lie on the right side, it indicates storm. The appearance of a number of cicadas indicates that the season will be unhealthy. If a lamp burns quietly during a storm, it indicates fair weather. So also if it has on the surface an appearance like shining millet-seeds: 2 also if a bright line surrounds the lamp-nozzle.

The fruiting of the mastich 3 gives signs as to the seasons of sowing: 4 it takes place at three several periods, which indicate respectively the time for the first the second and the third sowing: and according as one or other of these fruiting-times turns out 5 best and produces the most abundant fruit, so too will be it be success of the corresponding time of

sowing.

Miscellaneous signs

The following signs are said to affect either the whole year or whole periods 6 of it. If at the beginning of winter there is dull weather followed by heat, and these conditions are dispersed by wind without rain, it indicates that towards the spring there will be hail. Again, if after the spring equinox mists come down, it is an indication of breezes and winds by the seventh month, reckoning inclusively. Those mists which come down when the moon is in its first quarter indicate breezes for that period, those which come down when the moon is in its third quarter indicate rain. And the more mists

αν μαλλον έφ' έκατέρω τω σχήματι δμίχλαι,

πίπτωσι, μᾶλλον τὰ εἰρημένα σημαίνει.

57 Σημαίνει δὲ καὶ τὰ πνεύματα ἄμα ταῖς ὁμίχλαις επιπιπτούσαις γινόμενα καὶ εάν μεν άπ' γους και μεσημβρίας γίνηται τὰ πνεύματα, ὕδατα σημαίνει· ἐὰν δ' ἀφ' ἐσπέρας και ἀπὸ τῆς ἄρκτου πνεύματα και ψύχη. ους δὲ κομήτας Αἰγύπτιοι λέγουσιν οὐ μόνον τὰ προειρημένα σημαίνουσιν δταν φαίνωνται άλλα και ψύχη έπι δε τοις ἄστροις εἴωθεν ὡς ἐπὶ τὸ πολύ σημαίνειν καὶ ταῖς ἰσημερίαις καὶ τροπαῖς, οὐκ ἐπ' αὖταῖς ἀλλ' ἡ πρὸ αὐτῶν ἡ ὕστερον μικρῷ.

of 34; Arist Meteor 1 6.
 Text seems doubtful, as cold weather was included above.

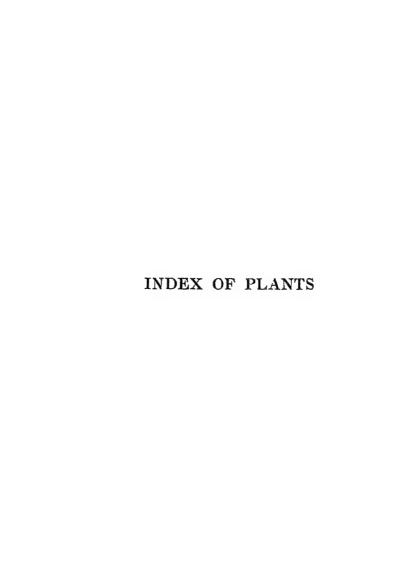

CONCERNING WEATHER SIGNS, 56-57

come down when the moon is assuming either shape, the more certainly is the result just mentioned indicated.

Also the winds which accompany the falling of the mists are significant: if the breezes come from the east or south, rain is indicated; if from the west or north, breezes and cold weather. And the stars which the Egyptians 1 call 'comets' indicate not only the conditions just mentioned but also cold 2 weather. 3 In the case of the rising of the stars the indication, as in the case also of the equinoxes and solstices, is given not at the actual time but a little earlier or later.

³ The text of this sentence can hardly be sound σημαίνειν has no subject and ταῖε ἰσημερίαις καὶ τροπαῖς no construction.

NOTE TO THE INDEX OF PLANTS

SPRENGEL made the first comprehensive attempt to determine in modern nomenclature the plants mentioned by Theophrastus. Wimmer gives the result in the Introduction to his 1842 edition. Sprengel adopted the most probable identifications of earlier botanists, supplemented by his own conjectures and Sibthorp's exploration of the Greek flora The ambitious but uncritical Conspectus Florae Classicae of Frass did not add much to our knowledge, which throughout had been vitiated by failure to recognise the fact that the Mediterranean flora differed from that of Western and Central Europe Halacsy's Conspectus Florae Graecae now gives us a scientific enumeration of the native plants of Greece, a Greek plant-name can be wedded to a plant which at any rate is Greek Incidentally much has been cleared up by special research at the hands of De Candolle. Hanbury, Yule, Schweinfurth, Bretzl, and others.

The identifications in the following Index are drawn from various sources; for their selection in view of the botanical data available I am indebted to Sir William Thiselton-Dyer A considerable number may be accepted as certain, many are probable, some no more than possible.

comp = compared.

= denotes a synonym Where a reference is added (see eg ἀτρακτυλίε), it indicates that Theophrastus himself states that the names are synonymous

άβρότονον, southernwood, Artemisia arborescens

1 9 4 evergreen, 6 1 1 in list of under-strubs; 6 3.6 an unnamed plant comp. see App (23); 6 7 3 propagation, 6 7 4 much seed roots described

äyvos (= oloos), chaste-tree, Vitex Agnus-castus

1. 3. 2 a shrub which becomes tree-like; 1 14 2 bears fruit at the top; 3 12 1 growth of κρανεία comp, 3 12 2 roots of θηλυκράνεια comp, 4 10 2 έλαίαγνος comp, 9 5 1 size of κιναμωνον and κασια comp

άγριελαιος (? = κότινος), wild olive,

Olea Oleaster

2 2 5 comes from seed of ἐλαα. ἄγρωστις, dog's tooth grass, Cynodon Dactylon

1 6 7 root jointed, 1 6 10. roots large and numerous, 2 2 1 propagation, 4 6 6 φῦκος (6) comp; 4 10 5-6 root described; 4 11 13 an unnamed form of καλαμος comp root of κ. ὁ Ἰνδικος comp, 9 13 6 habit of λοισθέσμαν comp.

of ερευθεδανον comp ἄγχουσα, alkanet, Anchusa tinctoria 7 8 3 leaves 'on the ground'

7 9 3 roots red ἀδιαντον, maiden-hair, Advantum Capillus-Veneris, etc

7 10 5 evergreen, 7 14 1 leaf cannot be wetted two kinds

(see below), medicinal use; grows in damp places

άδιαντον το λευκον (= τριχομανες 7 14 1), English maiden-hair, Asplemum Trichomanes

 14 1 described by comparison with à το μελαν medicinal use: here shady places

hkes shady places ἀδιαντον το μελαν, maiden-hair, Adiantum Cavillus Veneris

antum Capitus Veneris
7 14 1 comp with a το λευκόν.
αδραφαίνε, orach Atripius rosea
1 14 2 bears fruit both on top

14 2 bears fruit both on top and at sules, 3 10 5 seeds of φίλνρα comp, 7. 1. 2-3 tame of sowing and of germmation; 7.2 6 root described, 7.2.7-8. root of βλίτον comp, 7. 2.8 root. 7.3.2 seeds, 7.3.4. seed borne both at top and at side; 7.4.1 only one kind, 7.5.5. seed does not keep well

ἀειζωον, house-leek, Semperawum tectorum

1 10 4 leaves fleshy; 7 15. 2 always moist and green. habitat åθραγένη, traveller's joy, Clematis Vitalba

5 9 6 wood makes good firesticks described, 5 9 7 the stationary piece should be made of this or κιττός

ačycipos, black poplar, Populus nigra 1 2 7 bark, 1 5 2. bark fleshy, 2 2 10 Cretan form bears frut, 3 1.1 propagation, 3 3 1. tree of mountain and plain, 3 3 4 a question if it bears fruit, etc.;

3 4.2 time of budding, 3 6 1 quick growing; 3 142 described; 4 1 1 likes wet ground, 4 7 4 size of unnamed Arabian tree. see App. (12a), comp; 4 13 2 shorter-lived by water; 5 9 4 wood makes an evil smoke when burnt for charcoal

alychωψ (1) (= aσπρις), Turkey oak, Quercus Cerris

3 8 2 one of the five (Idaean) kinds of oak fruit, 3 8 4 habit and timber, 3 8 6. galls φάσκος (q v)

aiγίλωψ (2) (grass), Aegilops orata 7 13 5 seed sometimes takes two years to germinate: 8 7 1 comp with aipa, 8 8 3 grows specially among κριθαί; 8 9 2 like a wild plant; 8 9 3. greatly exhausts the soil, 8 11, 8-9 peculiarities about seed

αίμοδωρον, broom-rape, Orobanche

cruenta

8 8 5 parasitic on Bouképas (only) described

aipa, darnel, Lolium temulentum 152 'bark' in one layer; 241 πυρός turns into à , 4 4 10 δρυζου comp ; 8 4 6 does not infest certain kinds of πυρός. contrasted with μελάμπυρον: 8 7 1 $\kappa \rho \iota \theta \eta$ and especially muoos said to change into a. under certain conditions scribed λίνον also said to change into à : comp with alγίλωψ (2), 8 8 3 produced possibly by degeneration of κριθή and πυρός, or else specially affects such crops, 8 9 3 altogether a wild plant

άκαλύφη, nettle, Urtica urens
7.7 2 a λάχανον, needs cooking

ακανθα (1) ή Αίγυπτία, acacia, Aca-

cra arabica (and albida) 4. 2 1. peculiar to Egypt, 4 2 8 described two kinds (ή λευκή and ή μέλαινα) distinguished 9 (see below); 1.

gummy ἄκανθα (ἡ Αἰγυπτία) ἡ λευκή, acacia, Acacıa albıda

4 2 3 distinguished from å. h μέλαινα.

ἄκανθα (ἡ Αἰγυπτία) ἡ μέλαινα, acacia-Acacia arabica

2. 8 distinguished from & h λευκή

ἄκανθα (2) ή ἀκανώδης (see 4 10 6. n), corn-thistle. Carduus arvensis 4 10 6 root etc described

 ἄκανθα (3) ἡ διψάς, Acacus tortules
 4.7 1. the only tree which grows on part of the 'Red Sea' coast ακανθα (4) ή 'Ινδική (8ee App (9)), Balsamodendron Mulul

9 1. 2. sap gummy gum like σμύονα

ἄκανθα (5) η λευκη 'Ηρακλέους (= ăκανθα (6)), Euphorbia anti-

auorum4 4 12 described: uses of wood ακανθα (6) (peculiar to Gedrosia), =āκανθα (5), Euphorbia anti-

quorum4 4 13. described has a blinding

nuce

άκανθα (7) τις, gum arabic. Acantha arabica

9. 18 1 said to have the property of thickening water.

ἄκανθα (?) (8) (= ἄκανος = ἰξία (2) = ἰξίνη = χαμαιλέων ὁ λευκός 9 12 1), pine-thistle. Atractules aummıfera

 \ddot{a} κανος (= \dot{a} κανθα(8)= \dot{a} ξία (2)= \dot{a} ξίνη= χαμαιλεων ὁ λευκός), pine-thistle,

Atractylis gummifera

1 10 6 spinous-leaved; 1, 13, 3 flower attached above each seed, 6 1. 3. has spines on the leaves a wild under-shrub. 6 4 4 many stalks and sidegrowths, 6 4.5 one form only: 6 4 8 root of σόγκος contrasted: χαμαιλέων comp., 6 4 11. fruit-case of κάκτος (1) comp.; 6 6 6 seed of ρόδον comp.; 9 12 1. 'head' of χαμαιλέων ο λευκός comp.' another name for χαμαιλεων (?), 9 12 2 leaf of χαμαιλεων ὁ μελας comp

άκόνιτον (= θηλύφονον = μυόφονον = σκορπιός (3)), wolf's bane, Acont-

tum Anthora

16 4 localities: described: habitat eaten by no animal: 9 16, 5, difficulty of compounding drug: effects: has no anti-

dote; 9 16 7. use requires ex-pert knowledge: legal restric-tions; proportion between times of gathering and of administer-

акориа, Cnicus Acarna 1 10 6. spinous-leaved, 7. 4 3 a 'thistle-like' plant; 6 4 6 de-

ἀκτέος (?) (= ἀκτῆ), elder, Sambucus

nıgra

3 4 2, time of budding

- άκτη (= ἀκτεος), elder, Sambucus mgra 5 4. wood without knots; 1. 6. 4 core fleshy has no core, according to some, 1 8 1 few knots; 4 13 2 shorter-lived by water, 5 3. 3. character of wood.
- άλθαία (= μαλάχη ή άγρία 9 15.5), marsh-mallow, Althaea officin-
 - 9. 15 5 a drug, called in Arcadia μαλάχη ἡ ἀγρία, 9 18 1. root said to thicken water. described. medicinal use

äλιμον, Atriplex Halimus
4 16 5 Very dangerous to trees άλίφλοιος (δρύς), see δρύς (3) άλσίνη, Parietaria cretica 9 13 3 leaf of άριστολοχία comp

άλωπεκουρος, Polypogon monspelien-

11 2 flowers in a spike described.

άμάρακον (άμάρακος), sweet marjor-am, Origanum Majorana

1.9 4, evergreen; 6 1 1 in list of under-shrubs; 6 7 4 propagation roots described, 683 flowering time; 9 7 3 in list Of αρώματα

 ἄμπελος (1) (leaf οἴναρον 9, 13 5),
 γιας ντικ ντινίστα
 1.2.1 has tendrils, 1.2 7 bark,
 1 3.1 a typical 'tree'; 1 3.5 evergreen at Elephantine, 1 5 2
 bark cracked and fibrous' bark park cracked and informal bark m layers; 1.6.1 core fieshy; 1.6.3 roots thun, 1.8 5 roots branching upwards, 1 8 5 lighest shoots 'roughest'. 'eye' analogous to knot in other trees, 1 9.1 effect of pruning, 1.10.4. leaves broad, 1 10 5

leaf divided; 1.10 7. long leaf-stalk. attachment of leaf-stalk; 1 10 8 leaves made of 'bark' and flesh; 1 11 4 seeds all together in a single case, 1 11 5. each grape separately attached; 1 12 1 taste of fruit; 1.12 2. taste of sap, 1 13 1 flower down; 1.18 3 flower surrounds fruit, 1.13.4 some knds sterile, 1 14 1. bears on new shoots, 1 14 4 many cultivated forms 2.1 2 persons. tivated forms, 2 1 3 propagation, 2.2 4. degenerates from seed, 2 3 1. sometimes spontaneously changes character; 2. 3. 2 ἀ ὁ κάπνειος varies in colour of grapes on same bunch; 2 3. 3 sometimes bears fruit on the stem; etc., 25.3 propagation: cannot be grafted; 254 propagation; 25.7. low ground suitable great variety of kinds according to soil, 2 6 12 cuttings set up-side down; 2.71 water-loving; 2 7 2. needs much pruning; 2 7 5 use of dust, 2.76. rootprunng, 3 5 4 autumn budding, 3 17. 3 bark of κολοι-τια (2) comp; 3 18 5 flower and τια (2) comp; 3 18 5 flower and fruit of ροῦς comp, 3 18 12. Cluster of bernes of σμιλαξ (2) comp, 4 4 8 unnamed Indian ree (cotton-plant) planted in rows ilke å; 4 4 11. in India confined to hill-country, 4 5 4. grows on Mount Tinolus and Mysian Olympus; 4.7 7. leaf of δενδρον το ξενόφονο comp; 4 7 8 occurs on island of Tylos, 4 13 2 some kinds short-lived; 4 13 4-6 said to be longest-lived of trees: reason method of prolonging life artificially; 4 14 2 young plants liable to 'sun-scorch'; 414 6 other diseases; 4 14.7. 4 14 6 other diseases; 4 14.7. effects of mjury to roots; effects of mjury to roots; 4 14 8 effect of rain on fruit-ing; 4 14 9 a special pest at Mietus, 4 14 10 effect of hot winds; 4 14 13 effects of frost, 4 15 1. outer bark can be stripped; 4 16 1. survives

splitting of stem; 4 16 6. natural antipathy of a. to ράφανος, 5. 3 4 character of wood, 5 4 1 the less fruitful trees produce more solid wood. 5 9 4. wood, if damp, makes an evil smell when burnt for charcoal, 5 9 6 άθραγενη comp, 8 2 8 à in Melos, 9 1 6 time of tap-ping, 9.13 5 leaf and time of growth of πενταπετες comp 9 18 11 peculiar properties of certain local kinds

äμπελος (2) (Mt Ida), currant grape, Vitis vinifera, var corinthiaca 17 4 a local Idaean kind.

3 17 6 do described ἄμπελος (3) ἡ ποντία, Fucus spiralis

4 6. 2 peculiar to certain waters. 4 6.9 described.

άμπελος (4), η άγρία (= μήλωθρον), bryony, Bryonia cretica

3. 18 12. fruit of σμίλαξ (2) comp 9 14,1 how long drug prepared from it will keep; 9 20.3 properties of root medicinal use. άμυγδαλή, almond, Prunus Amug-

1.63 large central root; 196 leaves produced early, but not shed early; 1 11 1 seed immediately within envelope, 1 11 3 seed in a woody shell, 1 12 1 taste of fruit, 1 13 1 flower 'leafy' flower of some kinds reddish; 1 14 1 bears on last year's wood, 2 2 5 degenerates from seed, etc, 2 2 9 effects of cultivation, 2 2 11 do effect of tapping gum; 2 5 6 trees should be planted far apart, 2 7 6 'punishing' the tree, 2 7 7 tapping the gum, 2 8 1 apt to shed immature fruit; 3 11 4 fruit of μελια comp, 3 12 1 leaf of κρανεια comp, 4 4 7. fruit of τέρμινθος ή Ίνδικη comp, 475 fruit of unnamed Persian tree (see App (13)), comp, 4 14 12 uninjured by special winds; 595 wood-ashes make pungent smoke; 7.13 6 flower appears before leaves and (new growth of) stem, 8 2 2 germination de-

scribed; 9 1 2 sap gummy: 9 1 3 gum scentless, 9 1 5 gum useless, 9 19 1. leaf of ὀνοθήρας comp ἄμωμον, Nepaul cardamom, Amo-

mum subulatum

 9.7 2 an ἄρωμα, Median or Indian

ἀνδράχλη, andrachne, Arbutus Andrachne

15 2 bark readily drops off, 19 3 evergreen; 3 3 1. a mountain tree; 3 3 3 ever-green, 3 4 2 time of budding, 3 4 4 time of fruiting; 8 4 6. do; 3 6 1 slow growing (?); 3 16 5 described, 3 16 6 leaf of κοκκυγέα comp , 4 4 2 leaf of μηλέα ή Περσική comp ; 4.7 5 an unnamed Persian tree (see App (14)), comp, 4 15 1 does not perish if bark is stripped; 4 15 2, bark cracks, 5. 7. 6 wood used for parts of loom; 9 4.3 bark of σμύρνα comp.

άνδράχνη, purslane, Portulaca ole-

7. 1 2-3 time of sowing and germination, 729. root described. åνεμώνη, anemone, Anemone spp. 7.8 3 leaves on the ground

ἀνεμώνη, anemone, Anemone coronaria

7. 7 3 puts forth flower soon after season of growth begins. 7 10 2 flowers in winter

ἀνεμώνη ή λειμωνία, Anemone paronna

6 8 1 flowering-time ἀνεμώνη ἡ ὀρεια, Anemone blanda 6 8 1 flowering-time

äνηθον (= äννητος), dill, Anethum graveolens

1. 11 2 seeds naked; 1 12 2 taste of sap; 6, 2 8, fruit of ναρθηξ and ναρθηκία comp, also setting of flowers and fruit: 7 1 2-3 time of sowing and germination; 7 2 8 root described; 7 4 1 only one kind, 7 6 4. fruit of bosiogedinor comp

äνθεμον, Anthemrs chra, etc (see below)

13 3. flower attached above

each seed: 7 14 2 flowering begins at top: flower and fruit: several kinds (see below)

ἄνθεμον τὸ ἀφύλλανθες, wild chamo-mile, Matricaria Chamomilla

7 8 3 leaves on the ground ανθεμον τὸ φυλλώδες. Anthemis chia 7 8 3 leaves on the stem

άνθερικος, 800 ἀσφόδελος

aννησον, anise, Prmpinella Anisum 1. 12 1 scent

ἄννητος (= ἄνηθον) dill, Anethum graveolens

äπιος (1), pear, Pyrus communis.

var satīva

1 2 7 bark; 1 3 3 a tree whose stem is not single, 1 8 2 has less knots than axpas; 1 10 5 leaves round; 1 11 4 seeds all together in a single case, 1 11 5 seeds in a mem-brane; 1 12 2 taste of sap; 1 13 1 flower 'leafy'; 1 13 3 flower above fruit-case; 1 14 1

bears on last year's wood: 1. 14. 4. a cultivated form of άχράς; many cultivated forms; 2 1.2 propagation; 2 2 4. de-generates from seed 2 2. 5. seed produces wild form: 2 2 12. cannot be made out of axpas by cannot be made out of axos by cultivation, 2.5.3 grafting; 2.5.6 trees should be planted rather far apart, 2.7.7 punishing; the tree, 2.8.1 apt to shed immature fruit, 3.2.1 produces less fruit than axpas, but ripens more, 3.3 2 has better fruit and timber in lowlands, 3 4.2 time of budding; 3 6 2 formation of buds: 3 11 5 mountain and lowland 3 11 5 mountain and lowland forms comp; 3. 12 8. fruit of on comp. as to keeping, 3. 14. 1. leaf of πτελεα comp; 3. 14. 3. leaf of κλήθρα comp, 3. 18. 7. does not differ in kind from άχρας; 4. 2. 5 περσέα comp; 4. 3. 1. size of λωτυς (4) comp., 4. 4. 2. thorns of μηλεα ή Περσικα, comp., 4. 5. 3. abundant in Poncomp., 4. 6. abundant in Poncomp., 4. abundant in Poncomp. comp., 4 5 3 abundant in Pontus, 4 13 1 shorter-lived than axpas, 4 14 2 apt to get wormeaten, 4 14 10 fruit gets wormeaten, 4 eaten, 4 14 12 uninjured by special winds, 5 3 2 leaf of an unnamed tree comp (see App. (20)); 9 4 2 leaf of λιβανωτός

comp. ἄπιος (2) (= ἰσχάς θ θ. 5 = μάφα-Apros

9 5 medicinal use, 9 9 6 described

apaxos, Vicia Sitthorpii 1 6 12 an unnamed plant (see App (1)) comp. 8.8 3. ('the rough hard kind') grows specially among φακοι

aράχιδνα, Lathyrus amphicarpus 1 1 7 fruit underground, 1 6.12. root like a second fruit.

άρία (= ίψος = φελλοδρυς 3 16.3), holm-oak, Quercus Ilex var. agrıfolia

3. 3 8 doubt whether it has a flower, 3 4 2 time of budding; 3 4 4 time of fruiting; 3 16 3 Doman name for φελλόδρυς;

3.17 1 acorn of \$\phi \text{Ads}_c comp\$, 4.7 2 (?) leaf of \$\partial deptyn\$ (6) comp\$; 5 1.1. time of cutting timber; 5 3 3 character of wood, 5 4 2 wood proof against decay, 5 5 1 wood hard to work, 5 9 1 wood makes good charcoal

ἀριστολοχία, birthwort, Aristolochia rotunda

9 13 2 described medicinal use; 9. 14 1 how long drug will keep, 9 15 5 grows in Arcadia, 9 20 4 cf 9 13 2

άρκευθος (= κεδρας (3)), Phoenician cedar, Juniperus phoenicea

- 1 9 3 evergreen; 3. 3 1 a mountain tree; 3 3 3 evergreen, 3 3.8 doubt whether it has a flower, 3 4 1 takes a year to ripen fruit, 3 4 5 time of fruiting, etc., 3 4 6 do., 3. 6 1 slow-growing (?), 3 6 5 shallow-rooting according to Arcadians; 3 12 3-4 described distinguished from xeòpo; (1): 4. 1 3 grows high on mountains, but not tall; 5 7 4 use of wood in house-building, 5 7. 6 other uses of wood does not decay, 9 1 2 sapgummy
- άρνόγλωσσον (= στελέφουρος 7 11 2, according to some, = δρτυς 7, 11 2, according to some), plantam, Plantage major
 - 7.8 3. leaves 'on the ground',
 7 10 3 flowers borne in succession, 7 11 2 flowers in a spike:
 described by comparison with
 αλωπέκουρος

άρον, cuckoo-pint, Arum italicium

1 6 7 roof fleshy; 1 6 8 has a stout root and also fibrous roots: roots not tapering, 1 6 10 cultivation, 1 16 10 (?) flower made of flesh, 7 2 1 propagation, 7 9 4 root described, 7 12 2 root and leaves edible use in surgery special treatment to promote growth of root one kind inedible (see δρακόντων); 7 13 1 leaves described; 7. 13, 2, no stem or flower

ἀρρενόγονον (= θηλύγονον), dog mercury, Mercurialis perennis

9 19 5 properties: described.
 ἀσπαλαθος, Calycotome villosa
 9 7 3 in list of ἀρώματα

άστρις (= αἰγίλωψ (1)), Turkey oak, Quercus Cerris

3 8 2 one of the four Macedonian kinds of oak: acorns and timber

άστέρισκος, Michaelmas daisy, Aster Amellus

4 12 2. seed of μελαγκρανίς comp

άσταφίς, Delphinium Staphisagria 9 12 1 medicinal use.

ἀσφάραγος, asparagus, Asparagus acutifolius

1 10.6 spines for leaves, 6 1 3 do, a wild under-shrub; 6 4 1. one of very few plants which are altogether spinous; 6 4 2. described

ἀσφόδελος (stem ἀνθερικος), (=πόθος (2)), asphodel, Asphodelus ramo-

1 4 3 belongs to 'ferula-like' plants, 1 10 7 attachment of leaves, 6 6 9 leaves of νάρκισσος (1) comp, 7 9 4 root acorn-shaped, 7 12 1 root eduble; 7 13 1 leaves described; 7 13.2-3 stem of 'lpis comp; largest stem of herbaceous plants fruit inflorescence etc described; worm which infests it uses for food of stem and roots, 7 13 4 grown from seed; 9 9 6 leaf of lσχας comp; 9 10 1 stem of λλεβορος comp. by some

ãσχιον, puff-ball, Lycoperdon giganteum

1 6 9 not a root, though underground

ατρακτυλίς (=φονος 6 4 6), distaffthistle, Carthamus lanatus

άφάκη, tare, Vicia sativa var angustifolia

8 1 4. (a pulse) sown late, 8 5 3. shape of pod, 8.8.3. πελεκίνος

several kinds; 7 13 9 roots of various plants comp, 8 8.3 grows specially among #upos

βολβος δ έριοφορος, Pancratrum maritimum

7 13 8 grows on beach de-scribed uses for food and clothing

βουκέρας, $(=\tau \hat{\eta} \lambda \iota \varsigma)$, fenugreek Trigonella Foenum-Graecum

4. 4 10 an Indian plant (see App. (8)), comp 8 8 5 aimoδωρον parasitic on β

βουμελιος, ash, Fraxinus excelsior 3 11 4-5 described, 4 8. 2

common in Egypt Βούπρηστις,?

7 7 3 season of growing βούτομος, sedge, Carex riparia

1 5 3 stem very smooth, 1 10 5 leaves end in a point further described; 4 8 1. m last of τα λοχιμόδη, 4. 10 4 described, 4. 10 6 grows both on land and in water: grows on the floating islands of Lake Copais, 4 10 7 part used for food. 4 11 12 foliage of some κάλαμοι

βρόμος, Oats, Avena sativa

8. 4 1 seed has more coats than other cereals, 8 9 2 exhausts the soil reason like a wild plant.

βρύον, oyster-green, Ulva Lactuca 4 6 2 occurs generally in Greek waters, 4 6 6 described

γηθυον, long onion, Allium Cepa var 1.6 9 part of stem underground,7 1 2-3, time of sowing and of germination, 7 1 6 germination, 7 1 7 bears fruit in 7 2 2-3 root makes offsets, 7.5 1 likes water, 7.5 3 bears transplanting, 7 5 5 seed does not keep well; 7 9 4 root in scales, 7.12 3. root of φάσγανον comp; 9 11 6 'head' of στρύχνος ὁ μανικός comp

γήτειον (Attic for γήθυον), horn-onion, Allrum Cepa var 1. 10. 8 leaves hollow, 7 4 10

described: cultivation (classed as a form of κρόμυου) ykeivos, Acer cieticum

3 3 1 name for lowland form of

σφενδαμνος, 3 11 2 timber.
γλυκεία (sc ρίζα) (=ρίζα Σκυθική q v),
9 13 2, liquorice, Glycyrrhiza alabı a

γλυκυσίδη (= παιωνία q v), 9 8 6. peony, Paeonia officinalis γογγυλίς, turnip, Brassica Rapa

1 6 6 root fleshy, 1 6 7 root of bark and flesh, 7 1 2 time of sowing, 7, 1. 7 germination; 7 2 5 survives and increases in size under a heap of soil: root described, 7 2. 8. do, 7 3 2 seeds described, 7 3 4 seed borne at side, 7 4 3. doubtful if more than one kind . seed, method of sowing, effect of weather; 7 5 3 bears trans-planting; 7 6 2 wild form distinguished: 7 9 4 root has 'bark

δαθκον (1), carrot, Daucus Carota 9 15 5 Arcadián drug described

(see note

δαῦκον (2), Malabarla aurea 9 15 8 grows about Patrai: properties, root black, 9 20 2. cf 9 15 8

δάφνη (1) (ἡ ἡμερος), (berry δαφνίς, 1 11 3), sweet bay, Laurus nobilis

1. 5 2 bark thin, 1 6 2 roots both stout and fine, 164 roots crooked, etc, 181 few knots, 193 evergreen (cultivated and wild forms, see below), 1 11. 3 fleshy seed in a shell (δαφνις), 1 12 1 taste of fruit; 1 14 4 many cultivated forms, 2 1 3 propagation; 2 2 6 sometimes improves from seed; 2 5 6 trees should be planted close together, 3. 3 3. evergreen, 3.4 2 time of budding. 3 7 3 (one kind) produces a cluster, 3 11 3 leaves of media comp, 3 11 4 winter-buds of μελία comp, 3 12.7. leaf of δη comp to that of δ ή λεπτόφυλλος, 3 13 5 leaflet of ἀκτή comp to

leaf of δ. ή πλατυφυλλος; 3.14 3 flower (ν) of κληθρα comp.; 3 15. 4 leaf of τερμινθος comp; 3 16 4 leaf of комарос comp, 3 17.3 leaf of κολοίτια (2) comp to δ η πλατύφυλλος; 4 4 12 leaf of an unnamed Arian shrub comp (see App (10)), 4 4.13 leaf of an unnamed Gedrosian tree comp (see App. (11)), 4.5 8 does not thrive in cold regions. 4 5 4. grows in Propontis. 471. a class of marine Atlantic plants comp; 4. 7 4. leaf of an unnamed Arabian tree (see App (12b)) comp, 4 13 3 after decaying shoots again from same stock, 4. 16. 6. spoils flavour of grape, 5 3 3-4. character of wood, 5 7.7 wood used for walking-sticks, 5.8 3 grows in lowland parts of Latum abundant on Circeian promontory, 5 9 7 fire-drills made of the wood, because it does not wear away, 9 4 2. bark of λιβανωτός comp; 9 4 3. leaf of λιβανωτός comp. (by some), 9 4 9 do, 9.10 1. leaf of ἐλλέβορος ὁ μέλας comp (by some), 9 15 5, δαῦκον (1) comp; 9 20 1 one kind of πέπερι (fruit) comp

δάφνη (2) ή ἀγρία (= ὀνοθήρας), ole-ander, Nersum Oleander

1 9 3 distinguished from δ ή ήμερος

δάφνη (3) ή 'Αλεξανδρεία, Alexandrian laurel, Ruscus Hypophyl-

1 10 8 bears fruit on leaves;

3 17.4. do

δάφνη (4) ή λεπτόφυλλος, sweet bay, Laurus nobilis 3 12 7 (see under δάφνη)

δάφνη (5) η πλατυφυλλος, sweet bay,

Laurus nobilis 3.11 3, 3 13 5, 3 17 3. (see under δαφνη)

δάφνη (6) (= ἐλάα (3) = App (14)), white mangrove, Avicennia

officinalis 47.1. grows in 'Red Sea', 472.

described produces a drug for stanching blood

δίκταμνον, dittany, Origanum Dic-

9 16, 1-2 described: medicinal use popular belief about its use to goats. comp with ψευδο-δικταμνον, 9 16 3 habitat.

δίκταμνον (ετερον), Ballota Pseudodictaninus

9 16 3 Cretan: has nothing in common with true & except the name. described. properties different.

διόσανθος, carnation, Dianthus inodorus

6 1 1 in list of under-shrubs; 6 6 2 a cultivated under-shrub: a coronary plant: scentless; 6 6 11 grown from seed; woody, 6 8 3 flowering time

διοσβάλονος (fruit καρυον κασταναικον), 4 8 11 , chestnut, Castanea

vesca

1. 12. 1. taste of fruit; 3 2. 3. evidence that it is really wild; 3 3 1. a mountain tree; 3 3.8. doubt whether it has a flower: 3. 4 2 time of budding; 3.4.4. time of fruiting; 3 5 5 winter-buds, 4 5 1 in list of northern trees; 4 5 4. abundant on Mount Tmolus and Mysian Olympus, 4 8 11 bark of root of λωτος (2) comp to shell of chestnut

διόσπυρος, Diospyros Lotus
3 13 3 fruit of κερασος comp

δόλιχος, calavance, Vigna sinensis 8 3 2 stem, 8.11 1. seed does not keep

δοναξ (=καλαμος ὁ λακωνικος = κ ὁαυλητικός = κ ό συριγγιας = κ ότοξικός), pole-reed Arundo Donax 4 11 11 a kind of kalamos . habit and habitat

δρακοντιον, edderwort, Dracunculus vulgaris

7.12 2. an medible and poisonous kind of apov, 9 20.3 medicinal use. described.

δρυπίς, Drypis spinosa 1 10 6 spinous-leaved.

δρῦς (1), oak, Quercus Robur
1, 2, 1 has galls (κηκίς); 1, 2, 7
bark; 1, 5, 2 bark thick, bark fleshy, 1.5 3, wood fleshy, 1.5 5.

wood heavy because it contains mmeral matter, 16.1 core hard and close, 162 core called 'oak-black' core large and conspicuous, 1. 6 3 roots many and long, 1.6 4 roots fleshy deep-rooting, 1 8 5 diseased formation (κραδη), 1 9 5 an evergreen specimen, 1 10 6 leaves with leaves notched spinous projections, 1 10 7. attachment of leaves, 1 11 3 seed in a leathery shell, 2 2 3 propagation: 2 2 6 deteriorates from seed; 3 3 1 tree of mountain and plain; 3. 3 3 evergreen in some places: 3 3 8 doubt whether it has a flower (βρύον), 3 4 2 time of budding; 3 4 4 time of fruiting, 3.5 1 periods of budding; etc., 3 5 2 galls, 3. 5 5 winter-buds; 3 6 1 quick growing, 3 6 5 instance of a deep-rooting tree. 3 7 4-6 various galls, etc; 3 8.2 four or five kinds, viz ήμερίς Or ετυμόδρυς, αιγίλωψ, πλατυφυλλος, φηγος, αλίφλοιος ΟΓ εὐθύφλοιος (five recognised by inhabitants of Mt Ida), 3 16 1 leaf growth and bark of πρίνος comp; 3, 16, 3 φελλόδρυς δρθς and πρίνος comp; 4 2 8 common in Thebaid, 4 5 1 in list of northern trees, 453 grows in Pontus, 41410 infested by knips; 4 15.2 survives stripping of bark for some time, 4 15 3 effect of stripping bark in winter, 5 1 2. time of cutting timber: reasons. 5 1 4 do, 5 3 1 core very close and heavy, 5 3 3 character of wood, 5 4 1 wood hard and heavy, 5 4 2 wood proof against decay, 5 4 3 wood does not decay if buried or soaked in water rots in seawater 5 4 8 effect of salt water on different parts, 5 5.1. wood hard to work, 5 6 1. wood contains mineral matter and so gives under weight apt to split; 5 7 2 used for keel of triremes and for merchantmen to make extra keel for hauling : does not glue well on to ἐλάτη οι πεύκη; 5. 7 4. use of wood in houcebuilding, 5 8 3 grows in Lataum on Circeian promontory. 5.9 1 wood makes good charcoal, but inferior to asía and конароз, 5 9 2 charcoal of this wood less esteemed by smiths than that of πεύκη; 8.2 2 germination from acorn described. 9 9 5. leaf of yauaiδρυς comp

δρθς (2) ή άγρία (= φηγός 3 8 2). Valonia oak, Quercus Aegulops 1, 5 2 rough bark; 3, 8 2 see

under δρûs. δρθς (3) η άλιφλοιος (= δ. η εὐθύ-

φλοιος 3 8 2), sea-bark oak, Quercus Pseudo-Robur 3 8 2 one of the five kinds of

oak (Mt. Ida): =δ ή εὐθύφλοιος; 3 8 3-4 acorns, 3.8 5 habit and timber: 3.8 6 φάσκος (qv) grows on it, 387 timber: 5. 1 2 time of culting timber

δρύς (4) ή εὐθυφλοιος (= δ ή ἀλίφλοιος 3 8 2), sea-bark oak, Quercus Pseudo-Robur

3 8 2 one of the five kinds of oak (Mt Ida)

δρύς (5) ή ήμερος (= ετυμόδρυς q.v = ημερίς (2)), true oak, Quercus Robur

3 8 2, one of the five kinds of

oak (Mt Ida)

δρύς (6) ή πλατύφυλλος, broad-leaved oak (scrub oak), Quercus lanugrnosa

3.8 2 one of the five kinds of oak (Mt Ida). fruit, 3.85. habit and timber, 3.86. galls: one of the four Macedonian oaks. has bitter acorns.

δρῦς (7) (φῦκος), Cystoserra ericordes 4 6 2 peculiar to certain waters; 4.6 7-8 described.

δρθς (8) (ποντια), Sargassum vulgare 4 6 9 distinguished from δρῦς (7): has a useful Bálavos

ἐβένη (ἔβενος) (1), ebony, Diospyros Ebenum

1. 5 4. Wood heavy: 1. 5. 5 do. because of close grain, 1, 6, 1,

core hard and close, 4.4.6 described two kinds distinguished (see below); 5. 3. 1 wood very close and heavy, especially the core; 5.3 2 colour of wood of repursos comp: wood of an unnamed tree (see App (20)) comp to a variegated; 5 4 2 wood proof against decay; 9, 20 4 colour and medicinal use of wood

έβένη (2), Diospyros melanoxylon 4 4 6 a kind with inferior wood είλετίας, 800 καλομος ὁ είλετίας έκτομον το μελαμπόδιον see ἐλλέβορος ὁ

μελας

έλάα, olive, Olea Europea

1 8 1 a typical 'tree'; 1 5 4
wood easily broken, not split;
wood has many knots; 1 5 5
wood easily broken, because
tough and not of straight grain; 1 6 2. core not consplcuous, 1 6 3 roots both stout and thin; 1 6 4 roots branching; etc: shallow rooting; roots crooked, etc; 1 8 2 has less knots than korivos, 1.8.6 liable knotsthan korvos, 1.8.6 llable to excrescences, etc. 1 9 3. evergreen; 1 10 1 leaves inverted m summer; 1 10 2 colour of leaves; 1 10 4 leaves narrow; 1 10 7. leaf-stalk short, etc; 1 11 1 seed enveloped in flesh and stone; 1 11 3 fleshy seed in a stone; 1 11 4 effect on frut of rich feeding, 1 12 1 taste of fruit, 1 13 2 flower consists of one 'leaf' only partly divided; 1 13 3 flower surrounds fruit, etc; 1 14 1 bears auvided; 1 13 3 flower surrounds fruit, etc; 1 14 1 bears on last year's wood; 1 14 2 bears fruit both on top and at side; 1 14 4 a cultivated form of κότινος, 2 1 2 propagation, 2 1 4 do, 2 2.5 seed produces wild form, 2 2 12 cannot be made out of κότινος by cultivation; 2 3 1. sometimes changes approximate strong support of the contract of the strong support of the str to κότινος spontaneously; etc., 2 5 8 grafting; 2 5 4. propagation; 2 5 6 do trees should be planted far apart; 2 5. 7 low ground suitable, 2 7. 2 needs much pruning; 2 7. 3

requires pungent manure and much water, 3 2. 1 produces less fruit than κόπνος but ripens more, 3 12 2. flower and fruit nore, 3 12 z. nower and rink of θηλικράτεια comp; 3. 17. 5. size of fruit of συκή ή 'Iδαία comp; 4 2 8 common in Thebadi; 4 2 9. character in Thebad; 4 3 1 grows and bears well in Cyrenaica; 4.4 1. (?) distribu-tion in Asia, 4 7.2. leaf and fruit of ¿λάα (3) comp; 4 7.4 size of fruit of unnamed Arabian tree comp (see App (122b); 4. 13. 1. shorter-lived than kénvos; 4. 13. 2 story of a very old tree at Athens; 4 13. 5. ex-planation of longevity; 4 14 2. diseases; 4 14 8. effect of rain on fruting, 4 14 9 specially apt to shed fruit at Taras; 4 14. 10 other diseases: effect of hot winds: 4 11 suffers of hot winds; 4. 4 11. suffers much from special winds; 4 16 1. improved by lopping branches: 533 character of wood; 5.3.7. images made from the root; 5 4 2 wood proof against decay; 5 4. 4 wood not eaten by teredon, 5 5. 2 core not obvious: wherefore wood not apt to 'draw', 5 5 8. core not apt to 'draw', 5 5 3. core not obvious but exists; 5.6 1. wood apt to split under pressure; 5 9 6 wood good for kindling furnaces; 5 9.7 wood not suitable for fire-sticks, reason; 5 9 8 articles made of the wood have been known to produce shoots instances; 6.2 1. leaf of κνέωρος ο λευκος comp; 6 2 4. will not grow more than a short distance from the sea; 8 2 8 abundant in Melos; 9 18 5 fruit of θηλύγονον comp. to βρυον of è fruit of άρρενόγοvov comp to undeveloped olive.

kh'a (2), Olea cuspidata
4, 4 11 Indian (in hill-country only

 $^{6} \dot{\epsilon} \lambda \dot{\alpha} \dot{\alpha}^{3} (3) (= \delta \dot{\alpha} \phi \nu \eta (6) = \text{App.} (14)),$ white mangrove, Avicennia officınalıs

4 7 1 grows in 'Red Sea'; 47.2. described

 ἐλαίαγνος (properly ἐλεαγνος), goat willow, Salıx Caprea
 4. 10 1-2 in list of plants of L.

Copais. described ἐλάτη (1), silver-fir, Abies cephalonica

1 1.8 branches opposite; 1 3 6 refuses cultivation, 1. 5. 1 erect and tall, 1 5 2 bark in layers, 1 5 3 wood fibrous, 1 5 4 wood easily split; 1 5 5 do. because of straight grain. 1 6 3 root single, 1 6 4 roots fibrous, 165 roots not branching; 181 many knots, 182 many knots, 182 male has more knots than 'female', 183 branches at right angles; 191 growth chiefly upwards, 192 growth affected by position, 1 9. 3 evergreen; 1.10 5. leaves described, 1 12 1 taste of fruit, 1 12 2 taste of sap, 1 13 1 flower yellow, 2 2 2. propagated only by seed; 2 7.3. requires pungent manure: 3.1 2 grows only from seed, 3 3 1 a mountain tree, 3 3.3 evergreen, 3.4 5 time of flowering and fruiting, 3 5 1 period of budding; 3 5 3. do; 3 5 5 winter-buds, 3 6 1. quick growing. even young tree fruits, 3.6 2 formation of buds, 3.6 4 not deep-rooting, 3.6 5 deep-rooting according to Arcadians, etc., 3.7 1-2 dies if topped, formation of within 2.6 E time to according to the contraction of the contractio callus, 3 9 5 timber compared with meven etc, 3 9 6 differences between 'male' and 'female' described, 3 9 7. further comparison with πεύκη: produces λοῦσσον, 3 9 8 do.. core and callus, 4 1 1 likes shade, 4 1 2 grows tall in shade but has inferior timber, 4 1. 3. grows high on mountains, but not tall; 4 4 1 (?) distribution in Asia; 4 5 1 in list of Northern trees: 4 5 3 does not grow in Pontus; 4 15 3 effects of stripping bark at various seasons, 4 16 1 topping fatal; 4 16 1-2 not injured by cutting for resin; 4 16 4 said to perish if entirely deprived of its heart-wood; 5 1 1 time when timber is of best colour, 5 1.2 time of cutting timber. 5 1.4. do; 5 1 5-6, timber comp with πιτυς, 5 1.7 uses of tim-ber; 5 1 8 growth and char-acter; 5 1 9-10 methods of cleaving; 5 3 3 character of wood; 5 3.5. used for doors; 5 4 4 less eaten by teredon than πεύκη; 5 4 6 wood, if barked just before time of budding, does not decay in water: story in proof of this; 5 5 1. knotty parts of wood hard to work, 5 5 2 core most obvious in 4; 5 6 1. wood good for struts: behaviour under pressure; 5 6 2. strongest of all woods, 5. 7. 1-2 use of wood in ship-building; 5 7 4-5 uses of wood in housebuilding and crafts: the most generally useful of woods : more so than πευκη; 5 9 8 wood has a peculiar exudation, 912. sap gummy; 9 2 1 production of resin (pntivn); 9. 2 2. quality of resin

čλατη (2), silver-fir, Abres pectraata 5 8 1 grows to great size in Latium, but finer still in Corsica, 5 8 3 grows in hillcountry of Latium

' ἐλατη' (3), 'sea-fir,' Cystoserra

4 6 2 peculiar to certain waters; 4.6 7-8 described.

4. 6 7-8 described. ἐλατήριον, 800 σικυος ὁ ἄγριος

4 β 1 in list of northern plants. ἐλειοσέλινον (= σέλινον τὸ ἔλειον), marsh celery. Aprum graveolens 7 6 3 comp with σέλινον: medi-

cinal use έλειοχρυσος, gold-flower, Helichrysum seculum

6 8 1 flowering time; 9.19.3. alleged magic properties; described medicinal use

ἐλελίσφακος, salvia, Salvia triloba 6 1 4 a spineless wild undershrub; 6 2.5 like wild σφάκος: leaf described.

έλένιον, calamint, Calamintha incana

2 1. 3 propagation; 6. 1 1 in hst of under-shrubs 6 6 2 a cultivated under-shrub a coronary plant the whole plant scented, 6 6 3 woody only one form, 6 7 2 said by some to have no fruit, 6 7 4. roots described

έλίκη, crack willow, Salix fragilis
3 13 7 Arcadian name for willow

čλιξ, ivy, Hedera Helix 3. 18. 7-8 described: does not develop into κιττός, 3 18 8 kinds, 7 8 1 stem clasping.

έλιξ ή λευκη, white-berried ivy, Hedera Helix

3 18 8 several kinds

čλιξή ποικιλη(= ċ η Θρακια, 3 18 8), ivy, Hedera Helw 3 18 8 several kinds

ελιξη χλοερά, ivy, Hedera Helix 3 18 8. described

έλλεβορίνη, rupture-wort. Hermaria alabra

10 2 seed mixed with ἐλλέβορος ο λευκός to make an emetic

έλλέβορος, hellebore, Helleborus cyclophyllus and Veratrum album

4.5 1 seeks cold regions, 6 2 9 belongs to 'ferula-like' plants belongs to 'ferula-like' plants has a hollow stem, 9 8 4 what part of root cut for medicinal use, 'bulbous' part a purge for dogs; 9 8 6 poisonous effect on those who dig it, precautions; 9 9 2 medicinal use; 9 10 1-4 kinds distinguished (see below), 9 14 1 how long drug will keep, 9 17 1-3 the drug can be made meffectual by use: instances

έλλέβορος ὁ λευκος, white hellebore,

Teratrum album

9. 10 1. has nothing in common with ¿. ¿ uélas except the name : divergent accounts given of the resemblances between the two plants: described; 9 10 2 not poisonous to sheep; when in season distribution; 9 10 3-4. very local local varieties, Οἰταίος, Ποντικός, Ελεατης, Μαλιώτης, Παρνασιος, Αιτωλικός*

Oltaios the best, properties of 'Elearys; 9 15.5 grows in Arcadia; 9 18 2 restores scorpion to life when it has been killed With σκορπίος (3)

έλλεβορος ὁ μέλας (tírug σησαμοειδες 9 14. 4), hellebore, Helleborus

eaclophyllus

9 8 8 superstition as to gathering, 9 10 1 (see under à. 5 λευκός): described: 9 10 2. poisonous to animals, 9 10 3. grows everywhere, some localities specified, 9 10 4 called by some έκτομον το μελαμπόδιον: uses for purification and as charm, 9. 14 4 use of fruit in medicine, 9. 15 5 grows in Arcadia, 9.16 6 leaf of ἐψημερον comp

έλυμος, Italian millet, Setaria italica 4 4 10 inflorescence of opuçor comp , 8 1 1. in list of 'summer crops' distinct from cereals and pulses, 8 11. 1. seed keeps

ἔνθρυσκον, chervil, Scandix australis 7.7 1 a λαχανον.

inercen (?) (? πετυενη), Anga Ira
7 8 1 stem 'clasping,' but,
want of support, 'on but, for want of support, ground '

'Επιμενιδειος, εθε σκίλλα ή 'Ε èпінетрог, stone-crop, Sedum anopetalum

7 7 4 flowerless

έρεβιιθος, chick-pea, Cicer arietinum 2 4 2 seed soaked before sowing, 2 6 6 size of some dates comp; 4 4 4 size of fruit of συκή ή Ίνδικη comp., 4 4 9. not found in India, 6 5 3 leaf of a kind of pulses; 8 1 4 sown both early and late, 8 2 1 germination described, 8 2 3 comes up with several leaves deep-rooting; 8 2 5 flowering time; 8 2.6. time of maturing seed; 8, 3 2 stem; 8 5 1 several kinds three mentioned, κριοί, poβιαῖοι, οι ἀνὰ μέσον white forms sweetest, 8 5 2 pod round seeds comparatively few, 854 attachment of seed;

8 6 5 rain hurtful when ε is in flower, three kinds mentioned, μέλας, πυρρός, λευκός; 8 7 2 comp. with other pulses destroys weeds suitable soil grows well after κύαμος, 8 9 1 exhausts the soil most of pulses; 8 10 1 disenses and pests, 8 10 5 infested by caterpillars, 8 11 2 only seed which does not engender 'worms' etc. seed keeps well; 8 11 6 do especially in hill country

ἐρείκη, heath, Erica arborea
1 14 2 bears fruit on the top,
9 11 11 λιβανωτὶς ἡ ἄκαρπος
grows where i is abundant.

έρευθεδανόν, madder, Rubia tinctorum

6. 1. 4 a spineless wild undershrub; 793 roots red, 9134 do; 9136 described habit: habitat: medicinal use

έρινεός, wild fig, Ficus Carica
1 8 2 has more knots than συκή;

18 2 has more knots than συκή; 1. 14 4. wild form of συκή, 2 2 12 cannot be made into συκή by cultivation, 2 3 1 sometimes changes to συκή spontaneously, 3 3 1 a monitain tree, 3 4 2 time of buding, 4 2 3 fruit of συκή ή κυτρία comp; 4 13 1 longer-lived than συκή, 4 14 4 not liable to diseases of συκή, 5 6 2 wood tough and easy to bend uses, 5 9 5 wood makes pungent smoke

(δένδρον το) ἐριόφορον, cotton-plant, Gossyp.um arboreum

4 4 8 (not named) clothes made from it; 4 7 7-8 described έρπυλλος (1) (è ὁ ήμερος), tufted thyme, Thymus Sibthorpu

194 evergreen; 21 8 propagation, 611 in list of undershrubs, 662 a cultivated under-shrub a coronary plant the whole plant scented, 663 woody only one form, 672 said by some to have no fruit 674 roots described, 6.75 growth peculiar wild forms (see éprulla), 676 cultivation

ἔρπυλλος (2) ὁ ἄγριος, Attic thyme,
Thurnus atticus

 6 7 2 produces seeds, unlike ξ (1); brought from Hymettus; sometimes quite like θύμος, 6 7 5 has various forms

έρύσιμον, Sisymbrium polyceratuum 8 1 4 sown later than cereals and pulses a 'summer crop', 8 3 1 leaf, 8 3 3 flower, 8 6 1 ram not beneficial after sowing, 8 7 3 doubtful if eaten green by animals: described

έρυσίβη (cf έρυσιβάν, έρυσιβώδης 8 3 2.), wheat-rust, Puccinia

graminis

8 10 1. a pest common to all crops (cereals, pulses etc.) ἐτυμόδρυς (=ἡμερίς (2) 3 8, 2 = δρῦς

έτυμόδρυς (= ἡμερίς (2) 3 8. 2 = δρυς η ἡμερος), true oak, Quercus Robur

3 8.2 one of the five kinds of oak (Mt Ida) = ήμερις fruit; 3 8 7 one of the four Macedonian kinds has sweet acorns Εὐβοικόν, see καρνα ἡ Εὐβοικόν, see καρνα ἡ Εὐβοικόν

ευβοικον, see καρυα η Ευβοικη ευζωμον, rocket. Eruca sativa

i 6 6 root woody, 7 1 2-3 time of sowing and germination, 7 2 8 root described; 7 4 1 only one kind, 7 4 2 leaf of a kind of bafar's comp; 7 5 5 seed keeps well, 9 11 6

leaf of στρυχνός ο μαιικός comp εὐθύφλοιος (δρῦς), see δρῦς (4) εὐώνυμος, spindle tree, Εποπηπιιε

europaeus

Stramonum θυια (θυεια), odorous cedar. Juni-

perus foetidissima

1 9 3 evergreen, 3 4 2 time of budding, 3 4 6 time of fruiting, 4 1 3 grows on hill-tops $\hat{v}\mu_a$, 2 a madrepore

(θῦμα, ? a madrepore 4 7 1 grows in Atlantic turns to stone)

θύμβοα (θυμβρου), savory, Satureia Thymbra

1 3 1 (?) a typical under-shrub, 1 12 1 taste of fruit, 1 12 2 taste of sap, 6 1 4 a spineless wild under-shrub, 6 2 3 seed conspicuous not, like θύμος. particular as to situation, 6 7 5 a wild form of έρπυλλος comp 7 1 2-3 time of sowing and of germination, 7 1 6 germina-

tion, 7 5 5 seed keeps well; 7 6 1 wild form distinguished θυμον (1) (θυμος), Cretan thyme. Thymbra capitata

1 12 2 taste of sap, 3 1 3. reproduces itself without seed 6 2 3 two forms, black and white seed inconspicuous: 6 2 4 requires sea-breezes

('θύμον' (2), 'a madrepore 4 7 2 a marine plant which turns to stone described).

θυον (θύα), thyme-wood, Callitris quadrivalvis

5 3 7 described character and use of wood, 5 4 2 wood proof against decay

ὶασιώνη, bindweed. Convolvulus sepium

13. 2 flower consists of one 'leaf'

ϊκμη, ? duckweed, Lemna minor

4 10 1-2 in list of plants of Lake Copais, 4 10 1 requires further investigation

itía (1), oak-mistletoe, Loranthus eu) opaeus 3 7 6 grows on oak and other

trees, 3 16 1 grows on mpivos ίξία (2) (= ἄκανθα (9) = ἄκανος = ίξίνη = χαμαιλεων ο λευκός), pinethistle, Atraciylis gummifera 9 1 3 Cretan produces a gum

ίξινη (gum (ἀκανθικη) μαστίγη 6 4 9. 9 1 2) (= ἄκανθα (0) = ἄκανος = ὶξια (2) = χαμαιλέων ὁ λευκός), pine-thistle, Atractylis gummifera

6. 4 3 a 'thistle-like' plant; 6 4 4 time of growing; 6 4 9. described, 9 1 2 produces a gum called μαστίχη

ioν (=iωνια = iον το λευκόν), gilliflower, Mattheola meana

1. 9 4 evergreen; 2 1. 3 propagation, 4 7 4 colour and scent of unnamed Arabian tiee (see App (12a)) comp; 6 1 1 in list of under-shrubs, 6 6 1 a cultivated undershrub a coronary plant, sweetscented, 6 6 5 sweetest-scented at Cyrene, 6 6.11 grows from

seed; woody; 6 8 5 position and climate important for fragrance. flowers very early in Egypt; 6 8 6. on mountains blooms well, but has inferior scent, 7. 6 4 wiki form quite distinct, alike only in leaf

ίον το λευκον (= λευκοιον (1) = ίωνια ή λευκή), gilliflower, Matthiola in-

3. 18 13 flower of εὐώνυμος comp , 4 7 8 flower of an Arabian tree (see App (15)) comp, 6 6 3 several colour forms, 6 6 7 distinguished from t 70 \(\text{pc} \) acknowledge (8 1-2, flowering-time, 6 8 5. plant lives three years at most degenerates with age: 7 8 3. leaves on the stem

το μέλαν (= ἰωνια ἡ μελαιια), violet, Viola odorata
1. 13 2 has a 'twofold' flower, 6 6 3 only one form, 6.6 7. distinguished from i TO ASUKOP . 6. 8 1-2 a coronary plant: flowering time

 iπιον, ? marestail, Hippuris vulgaris
 4 10 1-2 in list of plants of Lake Copais, 4 10 4 requires further

investigation

lππομάραθον (=μαγύδαρις), Prangos ferulacea

6. 1. 4 a spineless wild undershrub . belongs to 'ferula like' plants

ιπποσέλινου, Alexanders, Smyrnuum

Olusatrum

194 evergreen, 221 propagation, 726 root of τευτλίου comp, 728. root, 763 comp with ελειοσελίνου medicinal use; 9 1 3. root produces a gum: which is like σμύρνα, 9 1 4 propagated from a δάκρυον a popular error about and σμύρνα, 9 15 1 grows in Arcadia

ιπποφαές, see τιθυμαλλος

iππόφεως, spurge, Euphorbia acan-thathamnos

6 5 1 in list of spinous plants which have leaves as well as spines, 6 5 2 has no spines on the leaves

lpic, iris, Iris pallida, etc.
1. 7 2. root fragrant; 4 5 2. grows best in Illyma on shores of Admatic, 6 8 3. a coronary plant. flowering time; 7 13 1. leaves described, 13 2. flower-stem not the only stem: stem comp with ἀσφόδελος. 9 7 3 in list of ἀρωματα; 9.7 4. only European ἄρωμα: best m Illyma preparation; 9 9. 2. perfume

ισχαιμος. Andropogon Ischaemum

9 15 3 Thracian properties. ισχας (= άπιος (2) 9 9 5 = ράφανος n opeia), spurge, Euphorbia Apros

ίτέα, willow, Salıa spp

4 2 lives near water, 1 4 3. amphibious; 1. 5 1 crooked and low, 1 5 4 wood light; 3 1 1. propagation; 3. 1. 2. seems to have no fruit, yet reproduces itself · instance , 3.1 3. sheds its fruit unripened, 3 3.1. tree of mountain and plain; 3 3 4 a question if it bears fruit; 3 4 2 time of budding, 3 6 1, quick or slow grower?, 3 13 7, described: kinds (see below): called in Arcadia λίκη; 3 14 4. leaf of κολυτεα comp, 4 1 1. likes wet ground; 4 5.7 common in some Mediterranean regions, 4 8 1 grows partially in water; 4 10 1 in list of plants of Lake Copals; 4 10 6 grows both on land and in water, 4 18 2 shorter-lived by water, 4 16 2 grows again after being cut or blown down; 4 18 3 instance of a tree which 4 16 3 instance of a tree which survived the lopping of its branches, 5.34 character of wood, 5 7. 7 uses of wood; 5 9 4 wood makes an evil smoke when burnt for charcoal.

irea ή λευκή, white willow, Salux 3.13 7 described

lτεα ή μέλαιτα, Salix amplexicaulis
3 13 7 described

ίφυοι, spike lavender, Lavandula Spica 6 6 11 a coronary plant grown

453

from seed; 6.8 3 flowering time

iψos,? cork-oak, Quercus Suber (G from Plin 16 98. Hesych has $i\psi os = \kappa \iota \sigma \sigma os)$

3 4 2 time of budding

ιωνία (= τον q v = τωνία ή λευκή = το λευκόν = λευκοιον (1)), gilliflower, Matthiola incana

lωνία ή λευκη (= lωνία = loν qv), gilliflower, Mattheola uncana

ίωνία ή μέλαινα (= τον το μέλαν η υ), violet, Viola odorata.

кактоя (1), cardoon, Cynara Cardunculus

10-11. a 'thistle-like' plant: described: peculiar to Sicily

ка́ктоs (2), artichoke, Cynara Scoly-

6 4 11 has erect 'stalk' called πτέρνιξ described; edible, base of receptacle called σκαλίας

κάλαμος, reed

 5. 2 bark fibrous. bark in one layer: 1. 5 3 stem jointed; 162 core membranous, 167 root jointed, 1 6 10 roots large root jointed, 1 6 10 roots large and numerous; 1 8 3 joints regular; 1 8 5 joints analogous to 'knots'; 1 9 4 evergreen, 1 10 5 leaves end in a point, further described, 1 10 9 leaves made of fibre leaf-stalk made nade of fibre lear-static hade of fibre, 2 2 1 (a kind of) propagation, 4 8 1 in list of τx λοιμωδη, 4 8 7 κυαμος ο Αἰγύπτιος comp, 4 8 8 thickness of root of Αύαμος ο Αίγυπrios comp; 4 9 1 class of rivers in which a grows, 4 9 3 has side-growths, 4 10 1 in list of plants of Lake Copais, 4 10 6 grows both on land and in water, 4 10 7 effect of drought. 4 11 1 distinguished from k ο αὐλητικός (see below) a stout and a slender form (à χαρακιας and ὁ πλόκιμος) (see below); 4 11 10-13 other forms, 6 2 8 setting of leaves of raphy and ταρθηκία comp; 9 16 1 δικταμνον kept έν καλάμω

κάλαμος ὁ αὐλητικος (=κ ὁ Λακωνικος

4 10 1. in list of plants of Lake Copais; 4 10 6 grows only in water, 4 11 1 distinguished from the ordinary form of k; 4 11 2 not true that it takes nine years to grow, 4 11 3 conditions of growth, 4 11 4 described by contrast with other κάλαμοι, 4.11 4-7 manufacture of the mouthpieces of pipes; 4 11 8-9 distribution in region of Lake Copais

κάλαμος ὁ είλετιας, Ammophila arun-

drnacea

4. 11 13. the 'male kind' of κ ἐπίγειος, so called by some κάλαμος (ἐπέγειος), bush-grass, Calamogrostis Epigeios

4.11 13 described growth comp to αγρωστις

κάλαμος ο εμώδης, sweet flag, Acorus

Calamus 4 8 3 grows in a Syrian lake;

971 habitat (east of Lebanon). described fragrance; 9 7 3 in list of ἀρώματα

κάλαμος ο Ἰνδικός, bamboo, Bambusa arundinacea

4 11 13 described. κάλαμος ὁ Ἰνδικός ('male'), Male bamboo, Dendrocalamus strictus 4 11 13 distinguished as solid

κάλαμος ὁ Λακωνικός (= κ ὁ αὐλητικός = κ ο συριγγίας = κ ο τοξικός = κ ὁ χαρακίας = δόναξ), pole-

reed, Arundo Donax 4 11 12 colour

καλαμος ο πλόκιμος, spear-grass, Ph. agmites communis

4 11 1 pliant reed, compared with k o xapanias grows on floating islands of Lake Copais.

κάλαμος ο συριγγιας (= κ ὁ αὐλητικός = κ ο Λακωνικός = κ ο τοξικός = κ ο χαρακίας = δόναξ), polereed, Arundo Donax

4 11. 10 described

καλαμος ο τοξικός (Κρητικός) (= κ. ο αὐλητικος = κ ο Λακωιικος = κ δσυριγγιας = κ ο χαρακίας = δό-ναξ), pole-reed, Arundo Donar 4 11 11. described.

κάλαμος ο χαρακίας (= κ ο Λακωνικός etc), pole-reed, Arundo Donax 4. II 1 stout form described: grows in reed-beds of Lake

Copais

κάλαμος (other kinds)
4 11 10 briefly described

каттарь, caper, Capparis spinosa 1. 3. 6. refuses cultivation, 3 2 1. fruits better in wild state; 4.2 6 fruit of βάλανος comp, 6. 1 3. has spines on the shoots 6.4 1 has spines on leaves as well as on stem; 6 5 2 described; 7. 8. 1 stem 'on the ground', 7 10 1 grows and flowers entirely in summer

κάρδαμον, cress, Lepidium sativum 1 12 1 taste of fruit, 7.1 2-3. time of sowing and germina-tion, 7 1, 6 germination, 7 4 1 only one kind, 7.5 5 seed keeps well

καρδάμωμον, cardamom, Elettaria Cardamomum

 7 2. an ἄρωμα, Median or Indian, 9 7 3 in list of ἀρώματα. καρύα (fruit κάρυον), hazel, Corylus avellana

1. 12 1. taste of fruit, 3 2 3 evidence that it is really wild . 3 3 1. a mountain tree, 3 4 2 time of budding; 3 4 4 time of fruiting, 4 5 4 abundant on Tmolus and Mysian Olympus, 8 2 2 germination described

καρύα ή Ευβοική, sweet chestnut, Castanea vesca var (improved form)

1 11 3 seed in a leathery shell; 4.5 4 common in Euboea and Magnesia, 5 4 2 wood proof against decay, 5 4. 4 wood does not decay in water (?) 5. 6 1 wood makes a noise when about to split instance, 5.7 7 uses of wood does not rapidly decay, 5 9 2 charcoal of this wood used in iron-mines

καρύα ή Ἡρακλεωτική (Ἡρακλεώτις) (fruit καρυον), filbert, Corylus

avellana vars

1. 3 3 effect of not pruming, 1 10 6, leaves notched, 1 11 1 seed immediately within enve-

lope, 1 11.3. seed in a woody shell: 3 3 8 doubt whether it has a flower (iovAos); 3.5 5-6. catkins; 3 6 2 formation of buds, 3 6.5 deep-rooting according to Arcadians etc: 3 7 3. catkins; 3 15 1-2. described . kinds

καρύα ή Περσίκη, walnut, Juglans regia

3.62 formation of buds; 3 14.4.

leaf of σημύδα comp

kaoía, ca-sia, Cinnamomum mers
4. 4 14 in list of oriental aromatic plants, 9 4 2 Arabian; 9 5 1 and 3 described; method of collection; 9 7 2. Arabian, 9 7 3 in list of apin-

καυκαλις, Tordylium apulum

7. 7 1 α λάχανον.

κέγχρος, millet, Panacum miliaceum
1 11 2 seeds in a husk; 4 4 10.
inflorescence of ορυζου comp; 4.8 10 fruit of λωτος (2) comp , 4 10 3 size of seeds of σίδη comp; 8. 1 1 in list of 'sum-mer crops' distinct from cereals and pulses, 8.1 4 sown later than cereals and pulses, 8 2 6. time of maturing seed, 8 3 2. stem, 8 3 3 flower, 8 3 4. seed abundant, 8 7. 3 needs httle water comp with μέλινος, 8.9 3 reasons why it might have been expected to exhaust the soil. contrasted with pulses as to 'lightness'; 8.111 seed keeps well, 8.116. do specially in hill-country;
9 18 6 fruit of κραταιγών comp.

λεδρις, jumper, Jumperus communs
 1.9 4 evergreen a dwarf kund
 (cf κεδρος 3 13. 7), 1 10 6.
 leaf spinous at tip, 1 12 1.

taste of fruit

κέδρος (1) (= δζυλεδρος 3 12. 3), prickly cedar, Juniperus Oxycedrus

1.5 3 wood not fleshy, 1 10 6. leaf spinous at tip, 3 6.5 shallow-rooting according to Arcadians, 3 10 2 μίλος comp.; 3 12 3-4 described. two kinds, ή Δυκίη and ή Φοινική (? Φοινι-

κική) (see κέδρος (3)), distinguished from άρκευθος; 3 13 7. has a dwarf form (neopis, cf 1 9 4); 4 3 3. size of fruit of παλίουρος ο 'Αιγύπτιος comp; 452 grows on Thracian and Phrygian mountains, 4 16 1 some think topping fatal, 5 3 7. images made from the wood, 5 4 2 wood proof against de-cay, 5 9 8 wood exudes mois-ture hence 'sweating' statues, 9 1 2 sap gummy

κέδρος (2), Syrian cedar, Juniperus excelsa

3.2 6 characteristic of mountains of Cilicia and Syria; 4 5 5 grows in Syria and is used for ships, 5 7. 1-2 use of wood in ship-building, 5. 7 4. use of wood in house-building, 5 8 1 remarkably fine in some regions e g. Syria

κέδρος (3), η Φοινικική (= ἄρκευθος). Phoenician cedar, Juniperus

phoenicea

3. 12 3. see κέδρος (1), 9 2, 3 said to be burnt for pitch in Syria κέδρος (4) ή Δυκιη

3 12 3. a kind so distinguished by some from κέδρος (3)

κενταύριον, centaury, Centaurea salonrtana

1. 12 1 taste of fruit. 3 3 6 only bears fruit in hill country, 451 seeks cold regions, 795 leaves and stems bitter, yet wholesome, 9 1 1 juice blood-red, 9 11 6 juice mixed with στρύχνος ὁ μανικός to make a

potion κενταυρις, feverwort, Erythraea Cen-

taurrum

9 8 7 superstition as to gather-9 14 1 how long drug will keep

κεντρομυρρινη (=μυάκανθος), butcher's broom, Ruscus aculeatus

3 17 4 bears fruit on its leaves κεραις (= ραφανος ή άγρια 9 15 5), charlock, Raphanus Raphanus-

κέρασος (= λακάρη), bird-cherry, Pru-

nus avium

3.13.1-3 described, 4 15 1 bark

can be stripped; 9 1 2 sap gummy. gummy. 'thunder-truffle,' Tubef κεραύνιον,

aestrium

1. 6 5. has no roots κερκις (1), Judas-tree, Cercis Siliquasti um

1 11 2 seeds in a pod

κερκίς (2). aspen, Populus tremula 3 14 3 described.

κερωνια (= συκή ή Λίγυπτία 1.11 2), carob, Ceratoma Siliqua

1. 11 2 seeds in a pod: 1 18 2 bears on stem and branches; 4 2 4 described

κήλαστρος (κήλαστρον), holly, Ilex Agurfolium

1.3 6 refuses cultivation; 1 9.3. evergreen, 3 3 1. tree of mountain and plain; 3 3, 8 ever-green, 3 4 5-6, time of fruiting; said to lose fruit in winter; 4 1 3 grows in very cold positions; 5 6 2 colour of wood οί φιλύκη comp; 5 7 7 wood. used for walking-sticks

κινάμωμον, cinnamon. Cinnamomum

Cassia

4 4 14 in list of oriental aromatic plants, 9 4 2 Arabian, 9 5 1-2. two kinds, white and black. described habitat. method of collection a story, 9 7 2 in list of ἀρώματα

κίσθος, rock-rose, Cistus spp

6 1 4 a spineless wild under-shrub, 6 2 2 described two forms (see below)

κίσθος ὁ άρρην, Cistus villosus 6 2 1 described

κίσθος ὁ θῆλυς, Cretus salvifolius 6 2 1. described

κιττός, ivy, Hedera Helia

1.3 2 a shrub which becomes tree-like, 1 0 4 evergreen; 1 10 1 leaves change shape with age of plant, 1 10.7 long leaf-stalk; 1 13 1 flower 'downy', 1 13.4 attachment of flower; 3 4 6 time of fruitmg. 3 10 5 fruit and leaf of φιλυρα comp, 3 14 2 leaf of kepais (2) comp, 3 18. 6. kinds distinguished (see below), 3 18 7 distinguished from

čλις; 3 18 9-10 described: habit etc., 3, 18 11 cluster of berries of σμίλαξ (2) comp described, 4 4 1 distribution in Asia; 4 16 5, overgrowth of & dangerous to trees, 5 3 4 character of wood, 5 9 6 wood said to make best fire-sticks. 5 9 7 the stationary fire-stick should be made of k or abpaγένη, 9 13 6 leaf of έρευθεδανόν comp

κιττὸς ὁ ἐλιξ, 800 ἐλιξ

κιττὸς ὁ λευκός, white-berried ivy. Hedera Helix

3 18 6 described several kinds. One = κορυμβιας, one = κ ο 'Αχαρνικός, 3 18 9 roots, 3 18 10 fruit, 9 18 5 properties of fruit κιττός ὁ μέλας, black-berried ivy, Hedera Helix

3 18 6 several kinds, 3 18 9 roots; 3 18 10 fruit

κιχόριον (κιχόρη), chicory, Cichorium Intybus

1 10 7 attachment of leaves, 7 7 1 a λάχανον, a class of plants called 'chicory-like' from their leaves, 7.7 3 season of growing, 7 8 3 leaves on the ground and on the stem, etc. 7 9 2 long in flower, 7 10 3 flowers borne in succession 7 11 3 root, inflorescence and seed-vessel described, 9 12 4 μήκων ή ροιας comp to κ το άγριον, 9 16.4 leaf of ακονιτον comp

comp κλήθρα, alder, Alnus glutinosa 1 4 3 'amphibious'; 3 3 1 tree of mountain and plain, 3 3 6 does not always fruit, 3 4.2 time of budding, 3 4 4 time of fruiting; 3 6 1 slow grow-ing (?), 3 6 5 roots slender and 'plain,' according to Area-dians, 3. 14. 3 described, 3 15 1. leaf of καρυα ή 'Ηρακλεω-τική comp, 4 8 1 grows par-tially in water tially in water

κλινότροχος (?), Acer Pseudo-platanus 3. 11 1 a form of σφενδαμνος κλύμενον, honeysuckle, Loniceia

etrusca 9 8 5 superstition as to time of cutting: 9, 18, 6-7, properties

κνέωρον (berry Κυίδιος κόκκος), Daphne Gnidium

6 1 4. a spineless wild under-shrub; 9. 20 2. berry described; medicinal use and pro-

κνέωρος ο λευκός, Daphne oleoides 6 2. 2 distinguished from k b

μελας, use of root κνέωρος ὁ μελας, Thymelaea hirsula 1 10 4. leaves fleshy, 6. 2. 2 see κ ὁ λευκος

 $\kappa \nu \hat{n} \kappa o s (= \kappa \ \hat{o} \ \hat{r}_{\mu} \kappa \rho o s = \kappa \rho \hat{o} \kappa o s \ \hat{o} \ \hat{a} \kappa a \nu$ θωδης), safflower, Carthamustine-

torius etc. (see below)

1 13 3 flowers attached above each seed, 6 1.3 a wild undershrub has spines on the leaves, 6. 4. 3 a 'thistle-like' plant, 6 4 4 no side-growths, 6 4.5 three forms distinguished and described, one cultivated (see below), 6. 6. 6. seed of pobov comp.

κνήκος ή άγρια, Carthamus leucocaulos 6. 4 5. distinguished from κ. ή nucpos

κυήκος η αγρια (έτερα), Critcus benedictus

6 4 5. described

κυῆκος ἡ μερος, Carthamustinctorius 6 4 5. distinguished from wild kında

Κνιδιος κοκκος, 800 κνέωρον

κυιξ (= κουκιοφορον), doum-palm, Huphaene thebarca

1. 10. 5 reedy leaves; 2 6. 10. a shrubby paim Ethiopian. κοκκυγέα, wig-tree, Rhus Cotinus 3.16 6 described.

κοκκυμηλέα (fruit κοκκυμηλον), plumtree, Prunus domestica

1 10 10 fruit made of flesh and fibre, 1. 11. 1. seed enveloped in flesh and stone, 1 12 1 taste of fruit, 1 13 1 flower 'leafy', 1 13 3. flower above truit-case, 3 6 4 very shallow-rooting few roots, 3 6 5 deep-rooting according to Idacans; etc., 4 2 3 size of fruit of συκή η Kυπρια comp., 4.25 fruit-stone of περσέα comp.

κοκκυμηλέα (ἡ Αίγυπτία) (sebesten), Cordia Muxa

4 2. 10 described

κολοιτία (1) (κολουτέα 3 17 2 cf 3. 17 3. n), Cytisus aeolicus

1. 11 2 tree of Lipari islands seeds in a pod, 3. 17. 2 de-

scribed

κολοιτια (2), Salux cinerea 3 17 3 Idaean: described.

κολοκύντη, gourd, Cucurbita maxima 1 11 4 seeds in a row: 1 12 2. taste of sap; 1. 13. 3. flower attached above fruit. 2 7 5. use of dust; 7. 1. 2-3 time of sowing and of germination, 7.1 6 germination, 7.2 9 rcot described, 7.4 1. several kinds, 7. 5. 5. seed does not keep well

κολυτέα, bladder-senna, Colutea arborescens

[3 14 4 described]

κόμαρος (fruit μεμαικύλου 3. 16 4), arbutus, Arbutus Unedo

1. 5 2. bark readily drops off, 1. 9 3 evergreen, 3 16 4 de-scribed, 3. 16. 6 leaf of kokkuyea comp, 5 9 1. wood makes good charcoal

 $\kappa \acute{o}\mu \eta = \tau \rho \alpha \gamma \sigma \pi \omega \gamma \omega \nu 7 7 1 q v$

κονυζα, Inula spp

6 1 4 a spineless wild undershrub, 6 2 5 two kinds described and compared ('male' 'female') (see below): 7 10 1 grows and flowers entirely in summer

κόνυζα η ἄρρην, Inula viscosa 6 2 5

κόνυζα ή θήλεια, Inula graveolens 6. 2 5

kopiavvov, comander, Comandrum sativum

1. 11 2 seeds naked, 7 1 2-3 time of sowing and germination. 7 1 6 germination, 7 2 8 root described, 7. 8 2 seeds described, 7 4 1 only one kind, 7. 5 4 effect of hot weather, 7 5. 5 seed keeps well. κορυμβίας, εξέ κιττός ὁ λευκος

κόρχορος, blue pimpernel, Anagallis caerulea

7. 7 2. a λάχανον. proverbial for

bitterness

κορωνόπους, hartshorn, Plantago Coronopus

7.8 3 leaves on the ground." ко́отоя, Saussurea Lappa

9 7 3 in list of downara κότινος (? = άγριέλαιος), wild olive,

Olea Oleaster 1 4. 1 more fruitful than έλαα,

1. 8 1. many knots, 1 8 2 more knots than elaa; 1 8 3 knots regular . knots opposite: 8 6 hable to excrescences: 1 14 4 wild form of ἐλάα, 2 2 11. cannot be made into eláa by cultivation effect of transplanting and removing top-growth; 2 3 1 occasionally changes to έλάα spontaneously; 3 2 1. produces more fruit than ἐλάα but ripens less, 3 6 2. knots opposite; 3.15 6 size of fruit of κράταιγος comp, 4 4. 11. Indian olive between A. and έλάα; 4.13 1 longer-lived than έλαα; 4 13.2 story of a very old at Olympia, 4 14 12 suffers less than than than special winds; 5 2 4 story of a tree at Megara, 5. 3 3 character of wood, 5 4.2 wood proof against decay, 5 4 4. wood not eaten by teredon; 5 7 8 uses of wood for carpenter's tools

 $\kappa o \nu \kappa i o \phi o \rho o \nu$ (= $\kappa o \iota \xi$), doum-palm. Hyphaene thebaica

2 6 9. (not named) described; 4 2 7 described

крачела (fruit крачеот 4 4 5). cornelian cherry. Cornus

1.6 1 core hard and close, 1.8 2. has more knots than θηλυκρίνεια, 3 2 1. fruit sweeter and better ripened in wild than in cultivated form; 3 3 1, tree of mountain and plain, 3 4 2 time of budding; 3. 4.3 time of fruiting; 3.6.1. slow-grow-ing(?), 3.12.1-2 described, 4.4.5 fruit of an unnamed Indian tree (see App (6)) comp; 5 4 1 more fruitful than θηλυκράντια, 5 6 4 wood very

strong

κραταίγουος, willow-weed, Polygonum Persicaria

9. 18 6 properties described. κράταιγος (= κραταιγών 3 15.6),

Cratagaus Heldreichis wild form of μεσπιλη 3 15 6. described

κρηπις, ox-tongue. Helminthia echioerdes

7. 8. 3. leaves on the stalk

κριθή, barley, Hordeum satu um

1.6 5 roots numerous; 1 6 6. do, 1 11 5 each seed separately attached . 2 2 9 said to turn sometimes into wheat. 2 4 1 wild & turns into cultivated with cultivation; 4 4.9 India has a corresponding cereal and a wild form of A.; 8.1 1. in list of cereals; 8 1 3 sown early, before πυρός; 8 1 5-6 time of germination in Hellas (and in Egypt?), 8 2 1. germination described; 8. 2. 3 single leaf first appears roots described; 8, 2 6, time of ma-turing seed; 8, 2 7, time of harvest in Hellas and in Egypt, 8 2 9 crop very early in island of Chalkia, 8 3 2 stem, 8 4 1-2 comp in detail with other cereals: kinds distinguished (see below), 8 6 1 conditions for sowing, 8 6. 4 suitable soil; 8.6 5-6. rain hurtful when κ is in flower and when it is ripe; 8.7 1. said to change into alpa under certain conditions, 8 7.5 in many places comes up again next year; etc, 8 8 2 iavourable localities, 8 8 3 αιγιλωψ(2) grows specially among κ, 8 9 1 exhausts the soil, but less than πυρος. reason; 8 10 2 wheat-rust, 8 10 3 effects of weather, 8 11 1. seed keeps less well than mupos, 8.11 3 grain stored without drying; 8 11 7 at Babylon grain jumps on the threshingfloor: reason; 9 11 9 τιθυμαλλος ὁ μυρτίτης gathered at time of barley-harvest, 9 12 4 μήκων ή pocas grows in fields of K.

κριθαὶ αὶ ἀγρίαι (Indian), Sorghum halenense

4 4.9 can be used for bread. κριθαί αι 'Αχιλλείαι, barley, Hordeum

satuum var.

8 4, 2, ear close to leaf: 8, 10, 2, specially hable to wheat-rust. κριθαι αι Ίνδικαί, barley, Hordeum satuum var.

8 4 2 branching

κριθών γενυς τρίμηνου, barley. Hordeum satuum var

8 1 4 sown late.

κρινον (= κρινωνία, cf. λείριον (1)),

hly, Lilium candidum etc 1 13.2 has a 'twofold' flower; 2.21 propagation from exudaion, etc.; 4.8.6 an unnamed Egyptian plant (see App. (18)) comp. 48.9. petals of itower of λωτος (2) comp. 6.6 3. several colour forms, 6.6 8. do., a coronary plant described propagation, 6 6. 9 leaves of vapricoros (1) comp.; 6 8. 3 flowering time: 9. 1. 4 cf. 2 2.1

κρίνον το πορφυρούν, Turk's cap lily, Lilium chalcedonicum

6, 6 3 (see kpivov).

κριοί, see ἐρέβινθος κρόκος, crocus, Crocus spp etc. (see below)

1. 6. 6 root fleshy; 1. 6 7. do. 1 6 11 large fleshy root; 7 7 1 leaf of τραγοπώγων comp, 7 4 flowering time short. three kinds mentioned, εύυσμος, λευκος, ἀκαυθωδης (κες below) 70 i root acorn-shaped, 710 2 flowers in winter, 7.13.1. leaves described; 7 13 2 no stem except flower-stem

κρόκος ὁ ἀκανθώδης (= κνήκος = κ ή ήμερος), safflower, Carthanius tinctorius

7 7.4 (see κρόκος) κροκος ὁ εύοσμος, saffron crocus, Crocus saturus

4 3 1 abundant in Cyrenaica; 6. 5 sweetest-scented at Cyrene, 6 6 10 a coronary plant described propagation; 6 8 3 flowering time a wild (scentless) and a cultivated

kind, 7.7 4 see κρόκος; 9 7 3 m list of ἀρώματα

κρόκος ο λευκός, CTOCUS, CIOCUS cancellatus

7.7 4 · 7.10 2 (see κρόκος) κρομυογήταιον, onion, Allium Cepa

4. 6 2 root of φυκος τὸ πλατύ

comp

κρόμυου, onion, Allium Cepa 1.5 2 'bark' in layers, 1 6 7 root in scales, 1 6 9, no side roots, 1 10 7 attachment of leaves, 1.10 8 leaves hollow, 7 1 7 stem single; 7, 2, 1 propagation, 7 2 3 growth of ρηθυσω and πράσου comp off-sets specially numerous; 7.3.4 seed borne at top, 7.4.7-10. kinds distinguished, Σάρδιου, Κυίδιου, Σομοθράκιου, σητάνιου, σχιστόν, 'Ασκαλώνιου. Cultivation and special points of σχιστόν (see below), 'Ασκαλώνιον: further local varieties, 7. 4. 12 formation of roots of σλόροδον contrasted, 7.5 1 likes water, 7.5.2 said to dislike rainwater, 7.8.2 stem smooth, not branched, 7 9 4 cf 1 6 7. 7 13 4 grows in colonies because of offsets; 9 15 7 root of μῶλυ comp.

κρόμυον το σχιστον, shallot, Allnum

Cepa var 7. 4 7-10 distinguished from other varieties of κρόμυον cultivation

κροτων, castor-oil plant, Ricinus communis

1 10 1 leaves change shape with age of plant, 3 18 7 do

κύαμος, bean, Vicia Faba

3 13 3 size of fruit of Kepagos comp, 3 15 3 fruit of τέρμινθος comp, 3 17 6 size of berry of άμπελος (2) comp, 4 3. 1 size of fruit of λωτός (4) comp, 7 3 1 length of flowering of ωκιμον comp, 8 1 1 in list of pulses, 8 1 3-4, sown early, but can be sown late, 8 1 5 time of germination very slow, 8 2 1 germination described, 8 2 3 comes up

with several leaves roots and side-growths contrasted with other pulses, 8 2 5 flowering time, 8 2 6 time of maturing seed, 8 3 1 leaf, 8 3 2 stem, 8 5 1 more than one kind white form sweetest, 8 5, 4, attachment of seed, 8 6 1, rain not beneficial after sowing, 8 6 5 likes water when in flower, but not later, 8 7, 2 nower, but not later, 8 ?, 2 makes ground fertile for έρε-βιθός, 8 8 6 causes etc. of κ becoming 'cookable' or 'un-cookable'; 8 9.1 improves the soil (cf 8 ? 2); 8.10.5 un-fested by Γυες, 8 11. 1. seed does not keep; 8 11. 3. seed keeps well in some localities

κύαμος (ὁ Αἰγύπτιος), Nelumbuum spe-

crosum

4 8 7-8 described; 4 8 9. stalk. leaves and growth of fruit of λωτός (2) comp

κυδώνιος (fruit μήλον κυδώνιον) (= στρουθίον (1)), quince, Cydonia

vulgarıs

2 2 5. produced from seed of στρούθιον, 4 8 11 size of root of λωτός (2) comp. to μήλον κυδωνιον

7 13 9. (in defective sentence): belongs to τὰ βολβωδη cyclamen, Cyclamen κυκλαμινος,

7 9 4 root has 'bark', 9 9 1 root and juice used, 9 9 3. use in medicine and as charm. 9 18 2 leaf of σκορπιος (3) comp

κύμινον, cummin, Cuminum Cymi-

1 11 2 seeds naked. 7.3 2-3 seeds described popular belief about sowing, 7 4 1 several kinds, 8 3 5 seed very abundant and small, 8 6 1 rain not beneficial after sowing, 8 8 5 a plant parasitic on root (see App (25)), 8. 10. 1 diseases, 9 8 8 cf 7 3 2-3 κυνόρροδον, dog-rose, Rosa camna

4 4 8 an unnamed Indian tree

(cotton plant) comp

κυνόσβατος, wild rose, Rosa sempervirens

3. 18 4 described, 9 8 5 super-stition as to method of cutting. κύνωψ, rib-grass. Plantago lanceolata

7 7.3 time of growing. 7 11 2 (?) flowers in a spike

κυπάριττος. cypress. Cupressus sempervirens

1 5 1 erect and tall: 1 5 3 wood not fleshy, 1 6 4 shallow rooting; 1 6 5. roots not branching, 1 8 2 'male' has more knots than 'female', 1 9 1 growth chiefly upwards, 1 9 3 evergreen, 1 10. 4 leaves fleshy, 2. 2. 2 propagation, 2 2 6 seed of 'female' produces 'male' trees, 2 7 1 dislikes manure and water, 3. 1 6 comes up spontaneously in Crete, 3 2 3 evidence that it is really wild (at least 'male' form), 3 2 6 characteristic of the Cretan Ida, 3 12 4. bark of κέδρος (1) comp ; 4 1 3. grows very high on Cretan mountains, 4 3. 1 grows in Cyrenaica, 4 5 2 abounds in Crete, Lycia, Rhodes, 4 18 12. beer (βρυτος) made from κ in Egypt, 4,16 1 some think topping tatal, 5 3 7 fuor comp images made from the wood, 5 4. 1 the 'male' form the more fruitful, 5 4 2 wood proof against decay. an instance takes a fine polish, 5. 7 4 use of wood in housebuilding

κύπειρον, Cyperus rotundus 9. 7 3. in list of ἀρώματα

κύπειρος, galingale, Cyperus longus 1.5.3. stem very smooth, 1 6 8 a stout root and also fibrous roots, 1 8 1 no knots, 1 10 5 leaves end in a point, further described, 4 8 1 in list of τα λοχμάδη, 4. 8 12 leaves of μαλιναθάλλη comp, 4 10 1 in list of plants of Lake Copals, 4 10 5 described, 4 10 6 grows both on land and in water: grows on the float-ing islands of Lake Copais, 4 11 12 foliage of some καλαμμι comp

κυτινος, see ρόα

κυτισος (1), laburnum, Laburnum ıulaare

 6 1 core hard and close, 4.4 6
 habit of ἐβένη comp., 5. 3 1. wood of the core very close and heavy

κύτισος (2), tree-medick, Medicago arborea

4 16 5 dangerous to trees.

κώμακον, Arlanthus malabarica 9 7 2 an Arabian άρωμα (1 e imported through Arabia : mixed with other ἀρώματα

Iname also given to fruit of a different plant]

κώνειον, hemlock, Contum maculatum

1 5.3 stem fleshy; 6 2 9 belongs to 'ferula-like' plants' has a hollow stem, 7 6 4. leaf of operocelivor comp , 9.8 3 most powerful juice from root; 9 15 8 localities, 9 16.8 medical experience, 9. 16. 9 treatment in Keos: 9 20 1 πέπερι an antidote to k

grown from seed λείριον (τὸ ἔτερον 683) (=νάρκισσος (1) 6 6.9), narcissus, Narcissus

serotinus 6 6 9. a coronary plant: described, flowering time.

Ainra, water chickweed, Callitriche verna

4. 10 1 in list of plants of Lake Copais. λευκάκανθα, milk-thistle, Silubum

ma) ranum

6 4 3 a 'thistle-like' plant

λεύκη, abele, Populus alba 1 10 1 leaves change shape with age of tree leaves inverted m summer, 3 1 1 propaga-tion, 3 3 1 tree of mountain and plain, 3 4 2 time of budding, 3 6 1 quick-growing, 3 14 2 described, 3 18 7 cf 1 10 1, 4 1 1 hkes wet ground, 4 2 stem of συκή ή Κυπρια comp, 4 8 1 grows partially in water, 4 8 2 scarce on Nile, 4 10 2 flower of chaiayres comp, 4 13 2 shorter-lived by water. 4 16 3 instance of a tree which grew again after falling down, 5 9 4 wood makes an evil smoke when burnt for char-

 $\lambda \epsilon \nu \kappa \sigma \sigma \nu (1) (= i \sigma \nu \tau \delta \lambda \epsilon \nu \kappa \sigma \nu = i \omega \nu \iota a$ ή λευκή), gilliflower, Matthrola mcana

λευλοιον (2), snowdrop, Galanthus navalis

13 9 (in defective sentence) belongs to τὰ βολβώδη.

λιδανωτίς 995 medicinal use, 911,10-11 two kinds (see below)

λιβαι ωτὶς η ἄκαρπος, Lactuca giaeca 9 11 10-11 described: medicinal use habitat

λιβανωτις ή κάρπιμος, (fruit καχρυ 9 11. 10), Lecokia cretica

9 11 10 described: medicinal use: habitat prevents moth in clothes

λιβανωτός, (gum λίβανος, frankin-cense, also λιβανωτος 9 4 4-9 etc), frankincense-tree, Bos-

wellia Carteri

4 4 14 in list of oriental ἀρώματα, 9 1.6 time of tapping; 9 4.1 collection of gum; 9 4 2 Arabian: described: habitat, 9 4.8 another account, 9 4 4-10 accounts of travellers, 9.11 3 scent of πάνακες το Ηρακλειον comp, 9 11.10 scent of root of λιβανωτις ή κάρπιμος comp. 9 20 1 an antidote to κώνειον

λίνου, flax, Linum usitatissimum 3 18 3 seeds only, 8.7.1 said

to change into aipa

λινον πύρινον 9 18 6 growth of κραταίγονος comp

λινοσπαρτον, Spanish broom, Spartrum sunceum

1 5 2 bark in layers

λυχνις, rose-campion, Lychnis coronana

6.83 a colonary plant flowering time

7 15 3 many plants called by this name which have nothing in common but the name.

λωτός (1), nettle-tree, Celtrs australıs

1.53 wood not fleshy; 1 6 1. core hard and close, 1 8.2 few knots, 4 2. 5 colour of wood of τερσέα comp, 4 2.9. wood of olive of Thebaid comp; 4 2 12 wood of an unnamed tree (? κοκκυμηλέα ή Αἰγυπτία)

comp, 5 3.1. wood very close and heavy, 5. 3. 7. images
and heavy, 5. 3. 7. images
made from the wood; 5. 4. 2
wood proof against decay
turns black when old, 5. 5. 4
core not obvious but exists,
5. 5. 6 treatment of core for making door-hinges; 5 8 1 grows in some places exceptionally fine

λωτός (2) (aquatic) (root κόρσιον), Nile water-lily, Nymphaea stel-

4 8 9-11 described

λωτός (3) (herb), trefoil, Trifolium

fragiferum
7. 8. 3 leaves 'on the stem', 7. 13 5 seed sometimes takes two years to germinate

λωτός (4) (Libyan tree), Zuzyphus

4 3 1. common in Libya, 4 3 1-2 described. 4 3 4 further described

λωτός (5) (aromatic) (= μελίλωτος),

Trigonella graeca 9 7.3 in list of àpópara

μαγύδαρις (= ἱππομάραθον), Prangos ferulacea

1. 6 12 root most characteristic part, 6 3 7 distinct from σίλφιον, described, distribu-

[6.3 4. name also given to seed ΟΙ σίλφιου]

μαδωνάις (= νυμφαία 9 13 1), yellow water-lily Nuphar luteum

μαλάχη (1), mallow, Lavatera arborea

3. 2 a herb which becomes tree-like under cultivation. 1, 9 2. do , 4 15 1 outer bank can be stripped, 9 18 1 leaf fruit and taste of stem of αλθαία comp

μαλάχη (2), cheese-flower, Malva silvestris

 7. 7 2. a λάχανον, needs cooking, 7.8 1 stem on the ground

μαλάχη (3) ή άγρία (= άλθαία 9 15 5), marsh-mallow, Althaea officinalis

μαλιναθάλλη (= μνάστου), Cyperus esculentus 4. 8 12, described

μανδραγόρας (1), mandrake, Mandra-

gora officinarum

9 8 8. superstition as to gather-9 9 1 root and juice medicinal use of leaf and root.

μανδραγόρας (2), ° deadly night— shade, Atropa Belladonna 6 2 9 belongs to 'ferula-like' plants has hollow stem. fruit described

μάραθον, fennel, Foeniculum rulgare 1. 11. 2 seeds naked, 1 12 2 taste of sap, 4 6 3 фікоз то basic of sap, 4 o 3 ο οκος το τριχάφυλου comp, 6 1 4 aspine-less wild under-shrub belongs to 'ferula-like' plants, 6 2 9 do : has a fibrous stem, 7. 3. 2. seeds described; 9 9 6 leaf of $\theta a \psi i a comp.$

μάσπετον, see σίλφιον

μελαγκρατις (= σχοίνος δ κάρπιμος 4 12 1), bog-rush, Schoenus nigricans

μελάμπυρον (μελαμπυρος). Νεείνα

paniculata

 4 6 infests πυρος ὁ Σικελος; contrasted with aipa: 8 8.3. (μελάμπυρος ο Ποντικός), Specially affects crops of mupos

μελία, manna-ash, Fraxmus Ornus 3 3 1. tree of mountain and plain, 3 4 4 time of fruiting; 3 6 1 slow growing (?), 3 6 5. roots numerous matted and run deep, according to Arcadians; 3 11. 3-4 described. thanks, 3 17 1. leaf of φελλός comp; 4 5 3 grows in Pontus, 4 8 2 common on Nile, 5 1 2 time of cutting tumber, 5 6 4 wood cutti 'moist'. used for elastic bed-steads, 5 7 3 wood used for bent-wood work. use in ship-building, 5 7 8 uses of wood for carpenter's tools

μελίλωτος (= λωτός (5)), Trigonella

graeca

7.15 3 one of the many diverse plants called Auros. μέλινος, (in other authors μελίνη:

see 8 1 1 n), Italian millet, Setarra rtalrca

8, 1 4 sown later than cereals and pulses, 8 2 6 time of maturing seed, 8 3 2 stem. 8 3 3 flower, 8 7 3 needs httle water . comp with κέγχρος μελισσόφυλλον, balm. Melissa offici-

6 1 4 a spineless wild undershruh

μεμαικυλον, 800 κόμαρος

μεσπίλη (fruit μέσπιλον) (= μ ή σατάνειος), medlar, Mespilus

germanica

3 12 5-6, described, three kinds (Idaean account, see below); \$ 13 1 leaf of képaros comp, \$ 15 6 leaf, bark and taste of fruit of κράταιγος comp : 3 17 5 flower of συκή ή 'Idaia comp also taste of fruit, 4 2 10, fruit οf κοκκυμηλέα comp , 4 8. 12 μαλιναθαλλη comp ; 4. 14. 10 fruit gets worm-eaten

μεσπίλη ή ανθηδονοείδης, hawthorn,

Crataeaus Oxnacantha 3, 12 5 described

μεσπίλη ή ἀνθήδων, oriental thorn, Crataegus orientalis.

3 12 5 described

μεσπίλη ή σατάνειος, medlar, Mespilus germanica

3 12 5 described

Μηδική (ποα), lucerne, Medicago

satıra 8 7 7 destroyed by sheep sleeping on it

μηκων, poppy etc , Papaver spp etc

(see below)

1 9 4 evergreen, 1 11 2 seeds in a vessel, 4 8 7 size of flower of κύαμος ο Αἰγύπτιος comp, 4 8 10 size of 'head' of λωτος (2) comp , 4 10 3 σίδη comp (?), 9 8 2 juice of 'head' collected, 9 12, 3-5 kinds (see below) having nothing in common but the name, 9 16 9 medical experience, 9 20 1 seeds of one kind of πέπερι comp

μήκων ή Ηρακλεία (= 'Ηρακλεία), Silene venosa

9. 12 5 described medicinal

1188

μήκων ή κερατίτις, horned poppy. Glaucium flavum var Serpieris 9 12 3 described, medicinal use: habitat.

μήκων ή μέλαινα, Papaver Rhoeas 9. 11 9 mixed with τιθύμαλλος δ

μυρτίτης to make a medicine μήκων (ή δπώδης), opium poppy, Papaver somniferum

1 12 2 juice.

μηκων ή ροιάς, Papaver hybridum 9. 12 4. described edible habitat medicinal use μηκωνιον (= τιθύμαλλος 9 8, 2).

spurge, Euphorbia Peplus

9. 8 2 collection of juice μηλέα (fruit μήλον), apple, Pyrus Malus

1 3 3. a tree whose stem is not single, 1 5 2 bark smooth bark readily drops off: 1.6 1 core fleshy, 1 6. 3 few roots; 1 6 4. shallow rooting, 1 8. 4 knots peculiar, 1 9 1 trunk divides low down; 1 10 4 (?) leaves fleshy; 1 10. 5 leaves oblong, 1 11 4 seeds all together in a single case; 1 11 5 seeds in a membrane, 1 12 1 taste of fruit 1 12 2 taste of sap, 1 13 1 flower 'leafy', 1 13, 3 flower above fruit-case, 1 14. 1 bears on last year's wood some kinds bear also on new wood, 1 14 4 many cultivated forms, 2 1 2 propagation, 2 2 4 degenerates from seed, 2 2 5 seed produces wild form, 2 5 3. grafting, 2 5 6 trees should be planted fanly close together; 2 6 6 some dates round like μήλα, 2 8 1. apt to shed immature fruit, 3 3 1 tree of mountain and plain, 3 3 2. has better fruit and timber in lowlands, 3 4 2 time of budding; 3 4 4 time of fruiting, 3 11.5 mountain and lowland forms compared, 4 5 3 abundant in Pontus; 4 5 4 grows on Mount Tmolus and Mysian Olympus; 4 7 7 size of fruit of δένδρον τὸ έριόφορον comp, 4 10.2 leaf of έλαιαγνος comp (?); 4, 10 3.

size of flower of outy comp; 4 13 2 short-lived, especially certain kinds, 4 13 3 after decaying shoots again from same stock, 4.14.2 apt to get worm-eaten; 4 14 10 fruit gets worm-eaten, 4 14 12 un-injured by special winds, 4 16 1. survives splitting of stem, 533 character of wood, 541 the less fruitful trees produce more solid wood, 6, 4 9 'head' of ιξίνη comp to μήλον

μηλέα ή γλυκεία, Pyrus Malus var ?
4. 13 2 specially short-lived;
4 14 7 has specially weak constatution, a form of μ ή ἐαρινή; 9. 11. 5 leaf of στρύχνος ὁ ὑπνώδης comp

μηλεα ή εαρινή, Pyrus Malus var ? 2 1 3 propagation, 4 7 7 size of cotton-bearing vessel comp, 4 13. 2 specially short-lived; 4 14 7 has weak constitution,

(cf. μ. ἡ γλυκεῖα). μηλεα ἡ ὁξεῖα, Pyrus Malus var ? 4. 13 2. comparatively long-lived μηλεα ή Περσική (Μηδική) citron, Cit-

rus Medica

1 11 4 seeds in a row; 1 13 4. only pistillate flower fruitful; 4 4 2 peculiar to Media and Persia described

μήλον το Κυδώνιον, 800 Κυδώνιος μηλωθρον (= ἄμπελος (4)), bryony,Bryonia cretica

3 18 11. fruit of σμίλαξ (2) comp; 6 1 4. a spineless wild under shrub.

μήνανθος. Limnanthemum nymphordes

4. 10 1-2 in list of plants of Lake Copais, 4. 10 4 requires further investigation

 $\mu \hat{\iota} \lambda a \xi (= \sigma \mu \hat{\iota} \lambda a \xi (2))$, smilax, Smilax aspera

1.10 5 leaf described, 1 10 6 leaf with spinous projections, 6. 8. 3. flower used in garlands

μίλος, yew, Taxus baccata

1. 9 3 evergleen, 3 3. 1 a
mountain tree, 3 3 3. evergreen; 3 4 2 time of budding,
3 4. 5 time of flowering and

fruiting, 3 4 6 time of fruit-

ing; 3 6 1. slow growing (?) 3 10 2 described, 4 1 3 likes shade, 5 7 6 uses of wood.

μίνθη (μινθα) (= ήδυοσμον), green mint. Mentha viridis

 4 1 σισυμβριον turns into μ unless often transplanted; 6 7 2. said by some to have no fruit.

μνάσιον (= μαλιναθάλλη), Cyperus esculentus

4. 8 2 used for food in Egypt: 4 8 6 described.

μυακανθος (= κεντρομυρρίνη), butcher's broom, Ruscus aculeatus 6 5 1 in list of spinous plants

which have leaves as well as spines

ος έλαα]

μύκης, mushroom etc , Fungus
1 1 11. has not all the 'parts' of a plant, 1 5 3 stem very smooth, 1 5 5 no roots; 3 7 6 grows on roots of trees.

[4.7 2 marine growths which turn to stone]. [4 14 3 name given to a disease

μυόφονον (= ἀκόνιτον= θηλύφονον = σκορπίος (3)), wolf's bane, Aconitum Anthora

1. 4 a spineless wild under-shrub belongs to 'ferula-like' plants, 6 2. 9 do, has a fibrous stem.

μυρίκη (1), tamarisk, Tamarix te-

trandra

1 4 3 'amphibious'; 1. 9 3

evergreen, 1 10 4 leaves
fleshy, 3 3 1 tree of mountain
and plain; 3 3 3. evergreen; 3 16 4 bark of komapos comp.; 4 2 6 (?) leaf of βαλανος comp.; 4 6 7. leaf of δρῦς (7) comp, 6 2 1. leaf of κνέωρος ο μέλας comp, 6 4 8 flower of xauatλεων comp

μυρίκη (2), tamarısk, Tamarıx articulata

5 4 8 Arabian: wood very strong μυρρίνη (μύρρινος, μύρτος) (fruit μύρ-TOV), myrtle, Myrtus communis

1. 3 3. effect of not prunng; 1 9 3 evergreen; 1 10 2 leaves close-set and opposite; 1 10 4 leaves narrow, 1 10 8.

leaves regular, 1 12. 1 taste of fruit, 1 13 3. flower above fruit-case, 1 14 1 bears on last year's wood flowers borne on new wood not fertile, 1144 many cultivated forms, 214 propagation, 2 2 6 sometimes improves from seed, 2 5 6 propagation trees should be planted close together, 2 7 2 needs much pruning, 2 7 3 requires pungent manure and much water, 3 6 2 formation of buds, 3.12 4 fruit of κέδρος (1) comp, 3 15. 5 leaf of πύξος comp, 3 16 4. flower of κόμαρος comp; 4 2 6 (?) leaf of Bálavos comp , 4 3 1. arrangement of fruit of Awros (4) comp 4 5 3 does not thrive in cold regions; 4.5 4 grows in Propontis, 5 8 3. grows in lowland parts of Latium and on Circeian promontory (a dwarf kind), 6 8 5 very fragrant in Egypt; 9 11.9 leaf of τιθύμαλλος ο μυρτιτης comp

μῶλυ, moly, Allrum nigrum 9 15 7 localities in Arcadia said to be like the u of Homer described use as cherm

ναίρον 9 7 3 in list of apwhata νâπυ, white mustard, Brassica alba 1. 12 1 taste of fruit, 7 1 2-3, time of sowing and of germination, 7 3 2 seeds described. 7 5 5 seed keeps well νάρδον, spikenard, Nardostachus Jatamansı

9.7 2 an Indian ἄρωμα, 9 7 3 in list of ἀρώματα, 9 7 4 an unnamed Thracian plant (see App (25)) comp

ναρθηκία (= νάρθηξ see 6 2.7), ferula, Ferula communis

6 1 4 spineless belongs to 'ferulalike, plants, 6 2 7 perhaps differs only in size from vapons. 6 2 8 described

ναρθηξ (= ναρθηκία see 6 2 7), ferula, $Ferula\ communis$

1.2 7 flesh turns to wood, 161 core fleshy, 1 6 2 core mem-

branous, 6 2 7. perhaps differs only in size from vaconkies 6 2 8 described, 6 3 1. stalk of σίλφιον comp, 9 9 6 stem of θαψια comp, 9 10 1 leaf of both έλλέβοροι comp by some, 9 16 2 δίκταμνον kept έν νας-DIKL

νάρκισσος (1) (= $\lambda \epsilon i \rho \iota ο \nu$ (2) 6 6 9). narcissus, Narcissus serotinus

6 6 9 a coronary plant, described. 7 13 1 leaves described, 7 13 2 no stem except the flower-stem; 7 13.5-7. stem appears before leaves, viz flower-stem sequence described and comp with σκίλλα

νάρκισσος (2), pheasant's eye nar-cissus, Narcissus poeticus

6.8 1. flowering time νάρτη

9 7 3 in list of downara

(νηπενθές) = μήκων η δπώδης, opium poppy, Papaver somniferum 9 15 1 mythical supposed effects

νυμφαια (= μαδωνάις 9 13 1), yellow water-lily, Nuphar luteum

13 1 fragrant habitat and localities leaf described medicinal use called μαδωνάις in Boeotia.

ξιρις, gladwyn, Iris foetidissima 987 superstition as to gathering $\xi \iota \phi \iota \circ \nu = \xi \iota \phi \circ 7 13 1 = \phi a \sigma \gamma a \nu \circ \nu$, corn-flag, Gladrolus segetum

6 8 1 flowering time. 7.13 2 flower-stem not the only stem. $\xi i \phi \circ \varsigma (= \xi i \phi i \circ \nu \ 7 \ 13 \ 1 = \phi \alpha \sigma \gamma \alpha \nu \circ \nu)$ corn-flag, Gladiolus segetum

oyxvn, wild pear, Purus communis var Pyraster

2 5 6 trees should be planted rather far apart

ύη (οιη), soib, Sorbus domestica

2 2 10 becomes sterile in a warm place, 2 7 7 'correcting' the tiee, 3 2 1 fruit sweeter and better ripened in wild than in cultivated form, 3 5 5 winterbuds, 3 6 5 roots shallow but strong: thick according to Arcadians, 3 11 3 leaf of mexica

comp, 3 12 6-9 described; 3 15 4 leaf of περμινθος comp οίνανθη (1), drop-wort, Spiraea Filipendula

6 6 11 a coronary plant grown from seed, 6 8 1-2 flowering time flower described

olváνθη (2) ή άγρια, wild vine, Vitis silvestris

5. 9 6 άθραγένη comp oloos (= άγνος), withy, Vitex Agnus-

castas

2. 18 1-2 has two forms, 'white' and 'black'; 6 2 2 used for tying-up

ολόσχοινος, see σχοίνος ὁ όλ.

ολύρα, (cultural variety of ζειά), ricewheat, Truicum dicoccum

8.13 sown early, 841 comp in detail with other cereals; 8.92 does not exhaust the soil much reason

δυοθήρας (= δάφυη η άγρια), oleander, Nersum Oleander

9. 19. 1 effect on 'mind': described.

ονόπυξος, Onopordon illyricum 6 4 3 a 'thistle-like' plant

δυοχειλές, bugloss, Echrum diffusum
7 10 3 flowers borne in succession

ονωνίς, rest-harrow, Onones anti-

quorum

6. 1 3 has leaves as well as spines. a wild under-shrub, 6.5 1. in list of spinous plants which have leaves as well as spines; 6.5 3-4 described: troublesome to farmers

δξυάκανθος, cotoneaster, Cotoneaster

Pyracantha

3 evergreen; 3 3 1 tree of mountain and plain; 3, 3 3, evergreen; 3 4 2 time of budding, 3 4.4. time of fruiting; 4.42 thorns of μηλέα ή Περσικη comp, 6 8 3. fruit used in garlands

b§in (b§va), beech, Fagus silvatica 3 3.8 doubt whether it has a flower; 8 6.5 roots few slender and 'plain' according to Arcadians 'shallow - rooting, 3 10 1 described, 3 11 5 mountain and lowland forms compared; 5 1 2 time of cutting timber, 5 1 4 do; 5.4.4 wood does not decay in water; 5 6.4 wood 'moist'. used for elastic bedsteads, 5.7 2 wood used for keel etc of small vissels; 5.7 6 other uses of wood, 5 8.3 grows very fine in lowland part of Latum.

οξύκεδρος (= κεδρος (1) 3. 12. 3), prickly cedar, Juniperus Oxy-

cedrus
3 12 3 some, who call αρκευθος a κεδρος, distinguish κεδρος (1) as δένκεδρος

δπιτιων,
 7 13 9 (m defective sentence)

belongs to τα βολβώδη.

δποβαλσαμον, see βαλσαμον δρειοσέλινον, parsley, Petroselmum sativum

 6 3-4 distinguished from other forms of σέλινον, medicinal use, δρειπτελέα, wych-elm, Ulmus montana

3 14 1 distinguished from πτελέα, δρίγανον (δριγανος) (= δ ἡ μέλαινα),

marjoram, Originum viride etc.
1 9 4 overgreen (partly); 1 12 1.
taste of fruit, 6 1 4 a spineless wild under-shrub; 6 2 3
two forms, 'black' and 'white'
(see belove) seed conspicuous:
not, like 8vjvos, particular as to
stuation, 7 1 3 time of germination, 7 1 6 germination,
7 2 1 propagation; 7 6 1.
wild form distinguished

υριγανος η λευκή, marjoram, Ori-

ganum heracleoticum

6 2 3 distinguished from δ. ή μέλαινα

ορίγανος ή μέλαινα (=ορίγανου), marjoram, Origanum vivide

6 2 8 distinguished from o ή λευκή

όρμινον, Salva Horminum

8 1'4 sown later than cereals and pulses, 8 7 3. doubtful if eaten green by animals described sown at same time as anadum

δροβαίχη, dodder, Cuscuta europaea 8 8 4 grows specially among δροβοι reason. ἀπαρίνη comp.

öροβος, bitter vetch, Erium Ervilia 2 4 2 more digestible if sown in spring; 7 5 4 used to prevent ψύλλαι in ραφανις, 7 6 3 size of fruit of iπποσελινον comp 814 sown both early and late, 8 2 5 flowering time, 8 3 2 stem, 8 5 1 more than one kind white form sweetest, 8 5 2 seeds not in compartments; 8. 5 3. shape of pod, 8. 8 4 5. Shape of pour, 5. S \$\frac{1}{2}\$
5. Shape of pour, 5. S \$\frac{1}{2}\$
5. S \$10 1 a pest, 8 11 2
5. Seed keeps well, 8 11 6 do
5. Specially in hill-country, 9 20 1
5. Shape of one kind of πέπερι (fruit) comp

όρτυξ (= στελέφουρος according to some, 7 11 2), plantain, Plantago Lagopus

όρυζον, rice, Ο/yza satīva

4. 4 10. described

ορχις (1) (μέγας), orchis, Orchis papvlionaceà

9.18 3 properties leaf and stalk όρχις (2) (μικρός), orchis, Orchis longicruris

9 18 3 properties leaf and stalk δοτρια (δοτριίς) (δοτριίς = ιστρις 3 10 3), hop-hornbeam, Ostrya curpunfolia

than 'female' has more knots than 'female', 3 3 1 tree of mountain and plain, 3 6 1 slow-growing (?), 3 10 3 described

ζστρυς (= ἀστρύα 3 10 3), hop-hornbeam, Ostrya carpunifolia

3 10 3 described

ούγγον, Colocasia antiquorum 117 'fruit' underground, 169 grows underground, 1611 described

 $\pi \acute{a}\delta os(?=\pi n\delta \acute{o}s(?)), Piunus Mahaleb$ 4 1 3 likes shade π αιωνια (= γλυκυσιδη 9 8 6), peony.

Paeonia officinalis 9.8 6. superstition as to time of

digging παλιουρος (1), Christ's thorn, Paliurus australis

1 3 1 a typical 'shrub', 1 3 2

becomes tree-like, 153 thorns on wood, 1. 10 6 leaf with

spinous projections; 1. 10 7 stem presently spinous, 3.3 1 tree of mountain and plain; 3 4 2 time of budding; 3 4 4. time of fruiting, 3 11.2 fruit of σφένδαμνος comp, 3. 18 3. kinds described, 4. 8 1 to some extent grows in marshes. 4 12 4 to some extent aquatic, 6 1 3 has spines on the shoots. παλίουρος (2) (ὁ Αἰγύπτιος), Ζιζυρλιιε

Spina-Christi 3 1-2 common in Libya;

4 3 3 described : distinguished from π , of Hellas πανάλεια (= παναλές τὸ Ἡράκλειον).

Opopanax hispidus 9 15. 7. localities

πάνακες (τὸ Σύριον ? 9.7.2: 9.10 1), (Juice χαλβάνη (?) 9.72. 9.92, see note), all-heal, Ferulago galbanıfera

9. 1 2. in list of plants whose juice is a gum; 9 7 2 Syrian. χαλβάνη made from π, 9 7 3 in list of ἀρώματα, 9 9 1 root iruit and juice used, 9 9 2 uses for medicine and perfume, 9. 11 1 kinds (see below), 9 11 4 two further kinds, one fine-leaved, the other not: medicinal use

πανακές 10 'Ασκληπίειου, Ferula nodosa

9 8 7 superstition as to gathering. 9 11. 1 described medicinal use

πάνακες το 'Ηράκλειον (= πανάκεια), Opopanax hispidus 9 11 1 in list of kinds of m:

9 11 3 described medicinal

πάνακες το Χειρώνειον, elecampane, Inula Helenium

9 11 1 described habitat: medicinal use παντάδουσα, star-thistle. Centaurea

Calcitrapa 6 5 1 in list of spinous plants which have leaves as well as

spines. πάπυρος (stalk πάπυρος), papyrus, Cyperus Papyrus

4 8 2 useful for food in Egypt: 4 8 3-4. described uses:

 8 5 stem of σάρι comp;
 3 1 belongs to 'ferula-like' plants

παρθένιου, bachelor's buttons, Pyre-

thrum Parthennum 7 7 2. a λάχανον needs cooking πέζις, bullfist, Lycoperdon Bovista 1 6 5 no roots

num officinale

9 14 1 how long drug will keep, 9. 15 1 grows in Arcadia, 9 20 2 properties of root use in medicine grows in Arcadia

πεύκη, fir, Pinus spp 1 8 6, refuses cultivation; 1 5 1 rect and tail, 154 wood has many knots, 161 core woody, 163 root single, 165 roots not branching; 181 many knots, 193 evergreen (the wild and one cultivated kind). 1 10 4 leaves like teeth of comb (?), 1 10 6 leaf spinous at tap, 1 12 1 taste of frut, 1. 12. 2 taste of sap, 2 2 2 propagated only by seed, 2.5.2. instance of very long roots; 3.1.2 grows only from seed: 3.2.3 evidence that it is really wild, 3.3.1. a mountain tree; 3.3.3 evergreen, 3.3.8 doubt whether it has a flower; 3.4.5 time of budding and fruiting; 3.4.6 time of budding, 3.5.3 do; 3.5.5 winter-buds, 3.5.6 cone, 3.6.1 quick growing; even young tree freuits; 3.6.4. not deep-rooting; 3.7.1. dies if topped, 3.7.3. produces a 'tuit' (xirrapos), 3.9.1-8. kinds according to various authorities (see below): distinction from xirvs; 3.9.4 timber, foliage; 3.9.5 further distinction from xirvs; the disease 'pitch-gint'; 3.9.7 comparison with examples of the seed of wood (when resinous) proof against decay, 5 4 4. more eaten by teredon than ελάτη 5 4 8 effect of salt water on different parts, 5.5 1 knotty parts of wood hard to work; 5 6 1 wood good for struts: behaviour under pressure, 5 6.2 takes glue best of all woods; 5 7 1-2 uses of wood in ship-building, 5 7 4-5 uses in house-building and crafts; 5 8 1. grows to great size in Latium, but finer still in Course 5 8 9. but finer still in Corsica, 5.83. grows in hill-country of Latium; 5 9 3 charcoal of this wood preferred by smiths to that of $\delta \rho \hat{v}_s$, 9 1 2. sap gummy, 9 1 6. time of tapping, 9 2. 1 pro-

ductive of resun ($\delta \eta r(i\eta)$); 9 2 2; quality of resun, 9. 2 3-4 Macedonians only burn the 'male' for pitch ($\eta r(i\tau)$), and the roots of the 'female', aspect etc required for production of good pitch, 9 2 5 Idaean account different ($ses \pi \eta$ 'lòaía and $\pi \eta$ $\eta \pi a pa \lambda(a)$; 9. 2 6. filling up the holes; 9 2.7 do Idaean account; 9 2 8. further rules for collecting pitch age of tree, etc., 9 3 1-3 method of preparing pitch, 9 1 4 does not grow in Syria

πεύκη ἡ ἄκαρπος (= π ἡ θήλεια = π ἡ Ἰδαία), Corsican pine, Pinus Larroro

3.9 2 described, 3 9.4 one of three wild kinds (Idaean account)

πεύκη η ἄκαρπος ('male'), Corsican pine, Pinus Laricio

3 9.2 comp with female '
πεύκη ἡ ἄκαρπος ('female'), Aleppo
pine, Pinus halepensis

3 9 2 comp with 'male'

πεύκη η ἄρρην (= π ή παραλία = πιτυς in 3.9 5), Aleppo pine, Pinus halepensis

3 9 3 timber. produces συκή (Mt Ida), 3 9 4 one of three wild kinds (Idaean account)

πεύκη ἡ ἡμερος (= [π η] κωνόφορος), stone pine, Pinus Pinea

3 9 1. distinguished from other kinds, 3 9 4 Arcadians say it is a πίτυς timber, foliage, resu

πεύκη η θήλεια (= π ή ἄκαρπος = π ή 'Ιδαία), Corsican pine, Pinus Laricio

3 9 3 timber contains alyis, 3 9 4 one of three wild kinds (Idaean account)

πευκή η Ίδαία (= π ή ἄκαρπος = π ή θήλεια), Corsican pine, Pinus Laricio

3 9 1-2, described, 9 2 5 Idaean account of pitch (πίττα)

[πεύκη η] κωνοφορος (= π ή ήμερος), stone pine, Pinus pinea

2 2 6 seeds true; 3 9 4 foliage pitch (πίττα) Arcadians say it is a πίτυς. πεύκη ή παραλία (= π ἡ ἄρρην = πίτυς in 3 9 5), Aleppo pine, Pinus, halepensis

3. 9 1 described; 9 2. 5 Idaean account of pitch (mirra)

πήγανον (πηγάνιον), rue, Ruta graveolens

1. 3 1 a typical under-shrub;
1 3 4 becomes tree-like, 194,
evergreen, 1 10 4 leaves
fleshy, 2 1. 3 propagation,
6 1 1. may be classed as an
under-shrub; 6 5 3 leaf of
δνωνις comp, 6 7 3 strong
plants of άβρότονον comp; 7 2 1.
propagation seed slow to germinate; 7 4 1. only one kind;
7 5 1. dislikes manure, 7.6 1.
wild form distinguished, 9 4 2
colour of leaf of λάκοωνος
comp; 9 5 1 leaf of βάλσαμον
comp, 9 9. 6 leaf of ίσχάς
(ἄπιος (2)) comp

πηδός (?) (? = παδος 4 1 3), PrunusMahaleb

5 7 6 uses of wood

πικρίς, Urospermum prorocides
7 11 4 inedible: flowers in

spring, but also throughout winter and summer thos, Polyporus igniarius (?)

πίλος, Polyporus igniarius (?)
3 7 4 produced by δρύς, described

πισός, pea, Pisum sativum

8 1 1 m list of pulses; 8 1 4 sown late, 8 2 3 comes up with several leaves, 8 3 1, leaf, 8 3 2 stem; 8 5 2 seeds not in compartments; 8 5 3 shape of pod, 8 10 5 infested by worms'

πιτυς (= πιτυς ή άγρια = πεύκη ή ἄρρην in 3 9 5 = πευκη η παραλια in 3. 9 5), Aleppo pine,

Prinus halevensis

1 6 1 core woody, 1 10 4. leaves like teeth of comb, 1 10 6 leaf spinous at tip; 1 12 1 taste of fruit; 2 2 2 propagated only by seed; 3 1.2 do, 3 3 3 evergreen; 3.3 8 doubt whether it has a flower (κύτταρος), 3 4 5 time of budding and fruiting, 3 5 5 winterbuds, 3 6 1 slow growing (?)

even young tree fruits; 3 9 4-8. πεύκη and πίτυς, 3 9 6 distinction from πεύκη; 3. 11 1 bark of opévôauvos comp , 3 17 1 bark of φελλός comp, 4 5 3 does not grow in Pontus 4 14 8 if topped, becomes barren, but is not destroyed. 4.16 1. topping fatal, 5 1 2 time of cutting timber, 5 1 4 do; 5 1 5-6. timber comp with \$\tilde{c}aar\eta, 5 7 1 used in Cyprus for ship building instead of πευκη, 5 7 3 wood used for bent-wood work in triremes, 5. 7. 5 use of wood in ship building and house-building soon rots; 5 7.8 use of wood for carpenter's tools, 5 9 2 charcoal of this wood used in silver mines; 9 1 2 sap gummy, 9 2 1. production of resin (ρητινη), 9. 2 2 quality of resm, 9 2 3, said to be burnt for pitch (πίττα) in Syria

πίτυς ή ἀγρία (= πίτυς = πεύκη ή ἄρρην = πεύκη ή παραλία in 3 9 5) Pinus halepensis (mountain form)

1 9 3 evergreen; 3 3 1 mountain tree (Macedonian)

πίτυς η φθειροποιός, Pinus brutia 2 2 6 seeds come true

πλάτανος, plane, Platanus orientalis
1. 4 2 lives near water, 1 6 3. roots many and long, 171 example of long roots, 185 diseased formation (κραδή); 1. 9 5 evergreen specimens, 1 10 4 leaves broad; 1 10 7 attachment of leaf-stalk, 311 propagation; 3 1 3. produces seed and seedlings; 3.3 3 everseeq and seedlings; 3.3 3 ever-green in some places; 3 4 2. time of budding; 3 6 1 quick growing; 3 11 1 leaf of σφεν-δαμνος comp; 3.11 4 has sort of winter-bud like that of μελία, 4 5 6, found at only one place on Admatic coast: rare in Italy; 4.5 7 common in some Meditarraneae. common in some Mediterranean regions, 4 7 4 size of unnamed Arabian tree (see App. 12a) comp, 4 8. 1 grows partially

in water; not common on Nile; 4 13. 2, trees said to have been planted by Agamemnon, 4 15.2. bark cracks; 4 16 2 again after being cut or blown down instances, 5 3 4. character of wood, 5 7 3. wood used for bent-wood work soon decays, 5 9 4 wood makes an evil smoke when burnt for charcoal, 9 11 6 'head' of στρύχνος è μανικός comp to fruit of π.

πλατυφυλλος (δρῦς) εθε δρῦς (6)

πόα, grass

7.8 3 leaves on the ground '

ποα ή Μηδικη, see Μηδική. πόθος (1), larkspur, Delphinium orrentale

6.8 3 a coronary plant: flowers in summer: flower like υάκινθος πόθος (2) (= ἀσφόδελος), asphodel, Asphodelus ramosus

6 8.3 a coronary plant. flowers in summer flower white used in connexion with funerals

πόλιον, hulwort, Tenerium Polium

1 10 4 leaves fieshy, prevents moth in clothes, 2, 8 3 used for caprification, 7 10 5 evergreen

πολυακαι θος, Carduus acanthodes 6.43 a 'thistle-like' plant πολυποδιου, polypody, Polypodrum vulgare

9.13 6 peculiar shape described: named from cuttle-fish (πολυπους), and used as charm to prevent polyp (πολύπους): other medicinal use habitat; 9 20 4. comes up after rain has no seed

πρασιον, Marrubium spp.

6. 1 4 a spineless wild undershrub, 6 2 5. two kinds; see below

πράσιον (1), horehound, Marrubium peregrinum 6 2 5 leaf described used by

druggists πράσιον (2), horehound, Marrubium vulgare

6 2.5 leaf described

πρασον (1), leek, Allium Porrum
7 1 2-3 time of sowing and of germination; 7 1 6. germina-

tion; 7 1 7 bears fruit in second year: stem single, 7. 2. 2 3 root makes offsets, 7. 3 4 seed borne at top method of sowing; 7 4 10 coat often like γήτειον; 7 4 11 size of 'head' of one year old σκόροδον comp, 7 5 3 improved by transplanting, 7 5 4. pests, 7 5 5 seed keeps well, 7 8.2 stem smooth, not branched, 9 10. 1 leaf of ἐλλεβορος δ λενικός comp by some

πράσον (2) (= ζώστηρ 4 6 2 = φῦκος (1)), grass-wrack, Posidonia

oceanica

4. 6 2 = ζώστηρ, q v πράσον (3) (= $φ\hat{v}$ κος (2)), riband-weed,

Laminaria saccharina

4 6 4 carried by current from Atlantic into Mediterranean described, 4.7 1 refers to 4 6 4 πρίνος, kermes-oak, Quercus coccifera

1.6. 1. core hard and close, 162. core large and conspicuous, 1.93 evergreen; 1 10 6 leaves with spinous projections, 3 3 1 a mountain tree, 3 3 severgreen, 3 3 6 does not always fruit 3 4 1. takes a vear to ripen fruit, 3 4 4-6; time of fruiting, 3 6 4 deep rooting; 3 7 3 produces a scarlet berry, 3 16 1 described, 3 16 2 σμίλαξ (1) comp, 3 16 3 φελλόξους δρῦς από στο comp; 4 3 1 leaf of λανός (4) comp; 3 16 4 leaf of λανός (4) comp; 6 ffect of stripping bark in winter, 5 4 8 wood of μυρίεν, (2) comp for strength, 5 5 4 core not obvious, but exists, 5 7 6 uses of wood, 5 9 7 wood used for fire-sticks, 9 4 3 leaf of σμύρνα comp by some

προυμνη (= σποδιας), bullace, Prunus

insititia

9.1 2 sap gummy πτελέα, elm, Ulmus glabia

18 5 diseased formation (κραδή),
1 10 1 leaves inverted in summer,
1 10 6 leaves notched,
3 1.1 propagation,
3 1.2 seems to have no fruit yet re-

produces itself: instance, 3 1 3. do., proof. 3. 3 1 tree of mountain and plain 3 3 4 & question if it bears fruit, 3 4.2 time of budding; 3 6 1. quick growing; 3 7. 3 produces a sorpus and leaf-galls, 3 11 5 mountain and lowland forms comp, 3 14 1 description: kinds, 3 15 4 leaf-galls of τέρμινθος comp; 3 17 3 leaf of Idaean κολοιτια comp, 3 17 5 leaf of συκή ή Ίδαία comp , 3.18 5 leaf of ρούς comp ; 4 2 3 leaf of συκή ή Κυπρία comp , 4 5 3 grows in Pontus , 4 5 7 common in some Mediterranean regions. 4 9. 2 leaf of τριβολος (3) comp, 4 15 2. survives stripping of bark, 5 1 2 time of cutting timber, 5. 3. 4. character of wood; 5 8 5 method of making door-hinges of the wood; 5 4 3 wood does not decay if exposed to air; 5 6 4 wood strong used for door-hinges, 5 7 3 wood used for bent-wood work use in shipbuilding, 5 7 6 other uses of wood, 5 7 8 uses of wood for carpenter's tools. 9 1 2 sap gummy gum contained in the 'bag', 9. 4 3 leaf of σμυρνα comp (by some).

reps, fern, Nephrodium Filtz-mas

1 10 5 frond described, 4 2 11.
leaf of an unnamed Memphian
shrub (see App (2)) comp, 8 7.7.
destroyed by manure or by
sheep sleeping on it, 9 13 6
leaf of πολυποδιού comp to π. η
μεγαλη, 9. 18 8 distinguished
from θηλύπτερις, 9. 20 5 root
only of use medicinal use.

time of gathering

πυζο, box, Buxus semperarens
1.54 wood heavy, 155. do,
because of close grain; 1.62.
core not conspicuous; 1.82.
few knots, 1.93 everguen,
331 a mountain tree; 333
evergreen, 3.46 time of fruiting. fruit inedible, 361. slow
growing (?), 3155 described,
4.4.1 hard to grow in Baby-

lon. 4 5 1. in list of Northern trees; 5 3 1 wood very close and heavy, 5 3 7. images made from the wood; 5 4 1 wood hard and heavy; 5 4 2 wood proof against decay; 5 4 5 wood not attacked by σκώληξ, 5 5 2. core not obvious; wherefore wood not apt to 'draw', 5. 5 4. core not obvious but exists, 5 7. 7 uses of wood, that grown on Mount Olympus useless, 5 7 8 uses of wood for carpenter's tools, 9. 20 4 wood of \$\frac{\psi}{2}\text{sproof} comp

1.5 2 'bark' fibrous, 1 6 5 roots numerous; 1.6.6.do; 1 11 2 seeds in a husk; 1 11 5 each seed separately attached; 2 2 9 said to turn sometimes into κριθή, 2 4 1 turns into αϊρα wild # turns into cultivated with cultivation; 4 4 9. πυροι grow in India, 4 10 3. taste of seeds of σίδη comp , 7 11 2 inflorescence and general appearance of στελέφουρος comp; 8 1 1 m list of cereals; 8 1 3 sown early, but after κριθή, 8. 1 4. one kind sown late, 8. 1 5 time of ger-mination; 8 2 1 germination described, 8 2 3 single leaf first appears: roots described. 8 2 6 time of maturing seed, 8. 2 7 time of harvest in Hellas and in Egypt, 8 3 2 stem, 8 4 1-2 compared in detail with other cereals, 8 4 3-5 kinds distinguished, local and other (see below), 8 6 1 conditions for sowing, 8 6 4 suitable soil, 8, 6 5-6 rain hurtful when π , is in flower, and when it is ripe, but less so than to spien; 8 7 1 said to change into aipa under certain conditions; 8 7 4 effect of cutting down or grazing young crop in Thessaly and in Babylon, 875. in many places comes up again next year, etc, 882 favourable localities, 883 degenerates

into aipa,—or else aipa is specially apt to grow among π .

8 9 1 exhausts the soil most of cereals; 8 10 1 a pest of π; 8 10, 2 wheat-rust; 8 10 3; effects of weather, 8 10 4 effects of worms in various localities; 8 11 1. seed keeps better than κριθή; 8 11 3 gram stored without drying; 8 11 7 effect of mixing earth with the gram in some places: at Babylon gram jumps on the threshing-floor reason

πυρὸς ὁ Αἰγυπτιος, Triticum vulgars

8. 4 3. in list of varieties of π.; 8 4 6 escapes αἴρα πυρὸς ο ᾿Αλεξανδρειος, Triticum vul-

gare var. 8 4 3. in list of varieties πυρὸς ὁ ᾿Ασσύριος, Trucum vulgare

8. 4. 3 in list of varieties πυρος ὁ Βοιώτιος, Triticum vulgare var

8. 4 5 heaviest grain πυρὸς ὁ Θράκιος, Triticum vulgare var

8 4 3. grain has many coats.

πυρὸς ὁ καχρυδίας 8 4 3. thick stem. πυρὸς ὁ κριθανίας 8. 2 3. branching

πυρὸς ὁ Λακωνικός 8 4 5 grain light. πυρὸς ὁ Λιβυκός

8 4. 3 grain not long in husk thick stem.

πυρος ὁ Ποντικος 8 4.3 -4 lightest grain; 8 4 5 variation in grain, 8.4 6 escapes alox

πυρός δ σιτανίας 8 2 3 branching. πυρος δ Σικελος

8 4 3, 8. 4 5 heaviest grain of kinds imported to Hellas; 8 4.6. fairly free from alpa, especially that of Akragas infested with μελαμπυρου

πυρος ὁ στλεγγυς 8 4 3 in list of varieties, see note

ράμνος, buckthorn, Rhamnus spp. 1 5 3 stem fleshy, 1.9.4 evergreen, 3 18 12 cluster of ber-

ries of σμίλαξ (2) comp., 5 9 7. wood used for fire-sticks, especially for the stationary piece ράμνος ἡ λευκή, buckthorn, Rhamnus

graeca
3. 18 2 distinguished from ἡ ἡ μέλαινα

ράμνος ή μέλαινα, buckthorn, Rhamnus oleoides

3 18 2. distinguished from β η λευκή

papavis, radish, Raphanus sativus

1 2 7 flesh of root turns to wood; 1 6 6 root fleshy, 1 6.7 root of 'bark' and flesh. 7 1 2-3 time of sowing and of germination; 7.1.5 do; 7 1 7. germination; 7.2 5 survives and increases in size under a heap of soil, 7 2 5-6 root described, 7 2 8. do, 7 3 2 seeds described, 7 3 4 seed borne at side; 7. 4 1-2 several kinds (described) Κορινθία. Κλεωναία, λειοθασία, (ΟΓ Θρακία) άμωρέα (see below), Βοιωτία, and one with leaf like ευζωμον, 743. effects of weather; 753 improved by transplanting, 754 pests, 7.6 2 root of wild yoyγυλίς comp, 7 6 3 root of ίπποσέλινον comp; 7 8 2 stem branched, 9 9. 1 method of cutting root of μανδραγόρας (1) comp, 9 12 1 method of cutting up χαμαιλέων ὁ λευκός for medicinal use comp

ραφανις ή ἀμωρεα, horse-radish (?)
7. 4 2 in list of varieties of ρ

jάφανος, cabbage, Brassica creinca

1.3 4 becomes tree-like, 1 6 6
root single, 1 9 4 evergreen;
1 10 4 leaves fleshy, 1 14 2
bears fruit on top and at side,
4 4 12 size of an unnamed Asian
shrub (see App (10)) comp,
4 16 6 spoils flavour of grape
vine-shoot turns away from β,
whence use of β as cure for
effects of wine, 6 1 2 may be
classed as an under-shrub,
7 1 2-3 time of sowing and of
germination, 7 2 1 propagation, 7 2.4 grows again when
stem is cut, effect on flavour.

7 4 1 several kınds, 7. 4, 4 three kınds dıstınguıshed, οὐλός φυλλος, λειόφυλλος, ἀγρία εξεθ below), 7 5 3 bears transplanting, 7 5 4 pests, 7.6.1-2 wild form dıstınguıshed.

ραφανος ἡ ἀγρία (= κεοαις 9 15.5), charlock, Raphanus Raphanustrum

7 4 4 see βάφανος; 7 6 1-2 see βάφανος, 9 15 5 Arcadian a drug also called κεράις

ράφανος ή ορεία (= ἄπιος (2)=ἰσχάς), spurge, Euphorbra Apros

9 12 1 used to kill a pig, mixed with χαμαιλέων δ λευκός ροά (ροιά), (flower κυτινος), pomegranate, Punica Granatum

1. 3 3. a tree which has not however a single stem, 1 5 1. crooked and low; 1 6.1 core fleshy; 1 6 3 few roots, 1.6 4. shallow rooting, 1 6 5 roots branching upwards, 1 9 1. much branched, 1 10 4 leaves narrow, 1 10 10 fruit made of fibre and skin, 1 11 4 seeds all together in a single case 1 11 5 each fruit separately attached (?), 1 11 6 arrangement of stones 1 12 1 taste of fruit, 1 13 1 flower red; 1 13 3 flower above fruit-case: 1 13 4 some kinds sterile; 1 13 5 flower described, 1 14 1 bears on last year's wood, 1 14 4 many cultivated forms, 2 1 2-3 propagation, 2 2.4 degenerates from seed; 2 2 5. do. details, 2 2. 7. in some places improves from seed. 2 2 9 effects of cultivation, 2 2 10 ref to 2 2 9.; 2 2 11 effect of good cultivation: 231. sometimes changes character: sometimes changes character; 2 3 2 ref to 2 2 7, 2 3 3, sometimes bears fruit on the stem, 2 5 5, propagation; 2 5 6 trees should be planted close together, 2 6 8, size of fruit of a kind of polivit (1) comp; 2 6 12. cuttings set upside down, 271 water-loving; 2 7 3 requires pungent manure and much water, 2 8 1, apt to

shed immature fruit; 3 5 4. autumn budding, 3 6.2. formation of buds, 3 18 4 fruit and growth of κυπόσβατος comp; 3 18 13 size and leaf of εὐώννρος comp; 4 3 3 stones eaten with fruit, 4 5 3 grows well in Pontus with shelter, 4 5 4 grows on Mt Tmolus and Mysian Olympus, 4. 10 3 flower of σίδη comp seeds of σίδη contrasted, 4 13 2 short-lived, especially the stoneless form (see below), 4. 18 3 after decaying shoots again from same stock, 4.14 10 fruit gets worm-eaten, 4 14 12 uningred by special winds, 4 16 1 survives splitting of stem; 6 1 3. has spines on the shoots; 7 13 4. fruit kept by mserting stalk in bulb of σκίλλα, 9 5 2 size of βαλσαρα comp

ροὰ ἡ ἀπυρηνος, Punica Granatum

4. 13 2 specially short-hved ροδωνία (flower ροδον, fruit μήλον 6 6. 6), rose, Rosa centifolia etc.

1. 9.4 evergreen, 1 13 1 colour alluded to, 1.13 2 has a 'two-fold' flower, 1 13 3 flower above frut-case; 1 13 5 flower of ρόα comp, 2 2 1 propagation, 4 8 7 colour of flower of κύαμος ο Αλγύπτος comp; 6 1 1 in list of under shrubs; 6 13 has spines on the shoots, 6 6 4-6 a cultavated under-shrub a coronary plant, many kinds. localities: propagation and cultavation, 6 8 2 flowering time, 6. 8. 5 bush lives five years and them degenerates unless pruned: position and climate important for fragrance. flowers very early in Egypt, 6 8. 6 blooms well on mountains, but has inferior scent, 9 19 1 colour of flower of δνοθήρας comp

ρόδον τὸ ἄγριον, wild rose, Rosa dumetorum

6. 2 1 flower of κίσθος comp

poùs (drug poùs 3 18. 5.), sumach Rhus Corvaria

3. 18. 1 has more than one form (see below), 3 18. 5 'male' and 'female' forms described: used for dyeing: produces a drug called poos

ρους ή λευκή 3. 18 2 distinguished from ρ ή

μελαινα

ρούς η μέλαινα 3. 18 2 distinguished from ρ ή

ρύτρος, globe-thistle, Echinops spin-

6 4. 4 a 'thistle-like' plant: branches from the top.

σάρι (stalk σάρι), Cyperus auricomus
 4.8 2 useful for food in Egypt;
 4.8 5 described

σέλινον, celery, Aprum graveolens

1.2 2 takes two years to mature, 1 6 6 root single, but with large side-growths; 1.9 4 evergreen (partly); 1 10.7 time of seaf-growth, 1 12 2 taste of sap, 2 4 3 effect of trampling and rolling in seed; 6 3 1 leaf of σιλφιον comp; 7 1 2-3 time of sowing and germination; 7. 1 6 germination, 7. 1 7 bears fruit in second year, 7 2 2 root makes offsets, 7. 2 5 root described, 7 2 8 do, 7. 3 4-5 methods of sowing and transplanting; 7 4 6 kinds distinguished; 7 5 3 bears transplanting, 7 6 3. wild forms (ἐπτοσέλινον, ἐλειοσέλινον, ἐλ

σέλινον το έλειον (= έλειοσελίνον), marsh celery, Aprim graveo-

4 8.1 in list of marsh plants;
 9 11 1. leaf of λιβανωτὶς ἡ καρπιμος comp

σέσελι, hartwort, Tordylium officinale

9 15 5 an Arcadian drug σημύδα (?), Judas-tree, Cercis Siliquastrum

3 14 4 described, 5 7 7 (?) wood used for walking-sticks

σήσαμον (seed σήσαμη), sesame, Sesamum ındıcum

1.11 2 seed-vessel, 3 13 6 seeds of berry of arth comp, 3.18 13 fruit of εὐώνυμος comp, 4814 size of fruit of an unnamed Egyptian plant (see App (20)) comp , 6 5 3 seed of a kind of τρίβολος comp, 811 in list of summer crops' distinct from cereals and pulses; 8 1.4 sown later than cereals and pulses: 8 2 6 time of maturing seed 8 2 0 time of maturing seed, 3 3 1 leaf; 8, 3 2 stem, 8 3 5. flower, 8 3 4 seed abundant, 8. 5 1 a white kind, which is the sweetest; 8 5. 2. seeds in compartments, 8 6. 1. rain out beneficial after sowing. not beneficial after sowing: 8. 7 3. not eaten green by any animal · ἐρύσιμον comp . sown at same time as ορμινον; 8 9 3. exhausts the soil; 9 9.2 fruit of ἐλλέβορος comp; 9 14.4 do σίδη, waterilly, Nymphaea alba

10 1-2. in list of plants of Lake Copais, 4 10 3-4 described size of fruit of βούτομος comp (to seed of σ), 4 10 6 grows only in water, 4 10 7 part used for food

outua, bottle-gourd, Lagenaria vul-

garıs 1 11 4 seeds in a row, 1 13 3 flower attached above fruit. 7 2 9 root described, 7 3 5 takes shape of vessel in which it is grown

σίκυος (σικυον), cucumber, Cucumis

1 10 10 fruit made of flesh and fibre, 1 12 2 taste of sap, 1 13 3 flower attached above fruit; 1 13.4 some flowers sterile, 2 7 5 use of dust, 7 1 2-3 time of sowing and germination, 7.1 6 germination, 7 2 9 root described; 7 3 1 long in flower, flower described; 7 3 5 effect of soaking seed in milk, 7 4 1 several kinds, 7 4 6 do viz. Δακωνικός, σκυταλιας, Βοιώτιος, 7 5 2 said to dislike rainwater, 7 5 3 bears transplanting; 7 5 5 seed does not keep well; 7 5 6 seed not liable to pests: 7 13. 1 leaf of anov comp

σίκυος ὁ ἄγριος, (drug ἐλατήριον 9 9 4), squirting cucumber, Ecballium Elaterium

4. 5 1. in list of Northern plants. 7 6 4 quite distinct from cultivated σ : 7 8 1 stem 'on the ground', 9 9 4 medicinal use. έλατήριον made from seed 9 4 1-2 how long drug will keep conditions, 9. 15. 6. grows in Arcadia.

σίλφιον (leaf μάσπετον 6 3 1), (seed φύλλον, μαγύδαρις 6 3. 4), sil-phium, Ferula tingitana

 6 12 root most characteristic part, 3 1 6 comes up spontaneously; 3. 2 1 fruits better in wild state; 4 3 1. grows in Cyrenaica, 4 3 7 consideration postponed, 6 3. 1-2 described belongs to ferulalike' plants rules as to cutting and treatment, 6 3 3 distri-bution, 6 3 4-6 another account, inconsistent in some points, 652 grows in mountain country, 7 3 2 seeds of ἀδρά-φαξυς comp, 9 1 3 stem and root produce a gum, 9.14 gum pungent, 917 time of tapping details about juices of stem and root

σισύμβριον, bergamot-mint. Mentha

aquatrea

1.31 (?) a typical 'under-shrub': 2 1 3 propagation, 2 4. 1 turns into $\mu i \nu \theta \eta$, unless often transplanted; 6.1 1 in list of under-shrubs, 6 6 2 a cultivated under-shrub, a coronary plant the whole plant scented : 6 6 3 woody only one form; 6 7 2 said by some to have no fruit. but the wild form certainly seeds, 6 7 4 roots described; 6 7. 6 cultivation; 9 16 3. leaf of δίκταμνον (έτερον) comp

σισυρίγχιον, Barbary nut. Iris Sisyrınchrum

1. 10 7 attachment of leaves:

7. 13 9 (in defective sentence) belongs to τὰ βολβώδη: peculiar growth of root upper part edible

σκαλίας, see κάκτος (2)

σκαμμωνία, scammony, Convolvulus Scammonia

4.5 1 seeks cold regions; 9 1 3 root produces a gum, 9. 1 4. gum has medicinal properties 9. 1 root and juice used

9 20 5 juice only used σκάνδιξ, wild chervil, Scanduz Pecten-Veneris

 7.7 1 a λάχανον, a class of plants called σκανδικώδη, 7 8 1 stem on the ground '

σκίλλα, squill, Urginea maritima 1. 6 7 root in scales; 1 6 8 root fleshy and bark-like: root root fieshy and bark-like; root not tapering, 1 6 9 no side roots, 1 10 7 no leaf-stalk attachment of leaves, 2 5 5 cuttings of $\sigma_{\rm ver}$ etc set in the bulb. of σ , 7.2 2 root makes offsets, 7 4 12. formation of roots of $\kappa_{\rm physor}$ comp; 7 9 4, of 16 7; 7.12 1. root edible (of the kind called $\dot{\eta}$ ' $E\pi\mu_{\rm per}i\delta\epsilon_{\rm cop}$), 7 13 1 leaves described 7 13 2 flower-stem of the only stem; 7.13 3 not the only stem; 7. 13 3 'successive' flowering of ἀσφό-7 13 4. very δελος comp, 7 13 4. very tenacious of life; hence various uses use as a charm; 7 13 5-7 stem appears before leaves: sequence described and comp with that of νάρκισσος (1), 9 18, 3 leaf of υρχις comp

σκίλλα ή Επιμενίδειος, French sparrow-grass, Ornthogalum pyren-

arcum7 12 1. see above

σκόλυμος (= ? λειμωνία 6 4 3), golden thistle, Scolymus hispanicus
4. 3. a 'thistle-like' plant

π. ο. a unsur-like plant leaves spinous; 6 4.4 time of flowering; 6 4.7 described, 7 4 5 leaf of θριδακίνη ή Δακο-νικη comp; 7 10 1 grows and flowers entirely in summer, 7 15.1 flowering describes 7 15 1 flowering depends on the heavenly bodies, 9 12 1 leaf of ranailéwy à leukos comp,

9 13.4 an unnamed plant of Tegea comp.

σκολόπενδρον, hart's tongue. Scolopendrum vulgare

9. 18 7 leaf of hulóviov comp.

σκόροδον (σκόρδον), garlic, Allum saturum

 6 9 no side-roots, 1, 10, 7. attachment of leaves; 7. 1 7. stem single; 7 2 1. propaga-tion; 7 2 3 offsets specially numerous; 7. 4 1. several kinds, 7 4 7 do, 7. 4 11. do.; eg τὸ Κύπριον. cultivation etc. 7 4. 12. formation of roots of κρόμυον contrasted, 7. 8 2 stem smooth, not branched; 7 13 4 grows in colonies because of offsets; 9 8 6 eaten as precaution by diggers of **ἐλλέβορος**

σκορπίος (1), Genista acanthoclada 6. 1 8 has spines for leaves; 6 4 1. one of very few plants which are altogether spinous; 6 4. 2 described

σκορπίος (2), leopard's bane, Doro-

nıcum cordatum

9 13 6 peculiar shape, resembles scorpion, and is useful against its sting

σκορπίος (3) (9 σκορπίον) (= ἀκονίτον = θηλύφονον 9 18 2 = μυόφονον), wolf's bane, Acontum Anthora

18 2 properties: habitat: fatal to scorpion

σκυθική (= γλυκεία, ες ρίζα 9 13.2), liquorice, Glycyrrhiza glabra

9. 13 2 fragrant grows on Lake medicinal use: use Maiotis against thirst

σμίλαξ (1), holm-oak, Quercus Ilex

typica 3. 16 2 described

σμίλαξ(?)(2)(=μίλαξ), smilax, Smilax aspera

3 18 11-12 described; 7 8 1. stem clasping

σμύρνα (gum σμύρνα 9 1 2), myrrh, Balsamodendron Myrrha

4 4 12 gum of an Arian ἄκανθα (see App (9)) comp, 4 4 14. in list of Oriental ἀρώματα, 9.1 2 sap gummy (called σμυρνα), 9 1. 6 time of tapping, 9 4 1 collec-

tion of gum, 9 4 2 Arabian: habitat, 9 4 3 described (two accounts), 9 4 4-10 accounts of travellers, 9 7 3 in list of άρώματα

σόγκος, sow-thistle, Sonchus Nymani 4 6 10 growth of φοινιξ (2) comp, 6 4 3 a 'thistle-like' plant, but has not the characteristic 'head' of such plants, 6 4 5 stalk of a kind of akavos comp . 6.4 8 root.

σπάλαξ (?) (= ἐφήμερον), meadow saffron, Colchicum parnassicum

 6. 11 large fleshy roots σπειραία, privet, Ligustrum vulgare
1,14 2, bears fruit at top; 6 1.4

a spineless wild under-shrub.

(σπογγία, sponge 4. 6 5. found on North Coast of

Crete; 4 6 10. distinguished from 'plants') σποδιάς (=προύμνη), bullace, Prunus

ınsıtıtıa 3. 6 4 very shallow rooting; few

στελέφουρος (= άρνόγλωσσον 7 11 2

according to some) (= oprus 7. 11 2 according to some), plantam, Plantago Lagopus στοιβή (= φεως 6 1 3), Poterium

spinosum 1 10

10 4 leaves fleshy; 6 1 3. has leaves as well as spines a wild under-shrub, 6 5 1 in list of such plants, 6 5 2 has no spines on the leaves

στρουθίον (1) = (κυδωνίος), quince, Cydonia rulgaris

2 2 5 seed produces κυδωνιος $\sigma \tau \rho o \upsilon \theta \iota o \upsilon (2) (= \sigma \tau \rho o \upsilon \theta o s), so a p-wort,$ Saponaria officinalis

6 4 3 a 'thistle-like' plant, but has not the characteristic 'head' of such plants, 6 8 3 a coronary plant flowering time: nary plant scentless

 $\sigma \tau \rho o \hat{v} \theta o s (= \sigma \tau \rho o v \theta i o v (2)). so a p-wort.$ Saponaria officinalis

9 12 5 leaf of μήκων ή 'Ηρακλεία comp

στρυχνος 7. 15 4 several plants called by

this name, which have nothing in common but the name , three mentioned (see below): 9.11, 5-6 kinds (see below), 9, 15, 5, two kınds grow in Alcadia.

στρύχνος ὁ ἐδώδιμος, garden nightshade, Solanum nigrum

3. 18 11 fruit of σμίλαξ (2) comp; 7 7 2. a λάχανον can eaten raw; 7 15 4 more or less cultivated: has berries

στρύχνος ὁ μανικός (= θρύορος 9 11 6. = mepitros 9.11.6) thorn-apple. Datura Stramonium

7.15 4 causes madness, or, in a large dose, death, 9 11 6. described, medicinal use, 9, 19, 1. effect on 'mind' στρύχνος ο ὑπνώδης, Withania somni-

fera 7 15 4. induces sleep: 9 11. 5.

described . medicinal use: habitat.

στύραξ, storax, Storax officinalis 9. 7 3. in list of ἀρώματα

συκάμινος, mulberry, Morus nigra 1.6 1 core hard and close . 1 9 7 time of leafing, 1 10 10. fruit made of fibre and skin; 1 12 1 taste of fruit, 1 13 1. flower 'downy', 1 13 4 attachment of flower, 5 3 4 character of wood; 5 4 2 do wood little liable to decay, turns black when old, 5 6 2 wood tough and easy to bend: uses; 5 7 3 wood used for bent-wood work, use in ship building.

συκαμινος ή Αίγυπτια, sycamore

Ficus Sycamorus 1 1 7 position of fruit; 1 13.2.

bears on stem, 4 1. 5. barren in uncongenial climate, 4 2 1-2. peculiar to Egypt described: 4 2 4 κερωνια distinguished.

συκή (1) (fruit σύκον), fig. Freus Carrea

1 3 1 a typical 'tree', 1. 3 5, evergreen at Elephantine; 1.5.1. crooked and low, 1 5 2. bark bank in one layer: smooth 1 5 3 wood fleshy; 1. 5 3. wood not fibrous, 1, 6, 1, core fleshy, 1 6 3, roots many and long; 1. 6 4 roots crooked; 1. 7 2. roots very long, 1. 8. 1.

no knots; 1 8 2 has less knots than ἐρινεός, 1. 8 5 young branches 'roughest', 1 9 7 time of shedding leaves, 1 10 4 leaves broad; 1 10 5 leaf divided etc; 1 10 8 leaves made of 'bark' and flesh; 1 11 4 seeds all together in a single case, 1 11 6 arrangement of seeds, 1 12 1 taste of fruit, 1 12 2 taste of sap, 1.14 1. bears on new shoots: sometimes also on old wood (?) 1, 14. 4 cultivated form of èρινεός many cultivated forms, 2. 1 2 propagation, 2 2 4. degenerates from seed etc. 2 2. 12 cannot be made out of encreés by cultivation, 2 3 1 sometimes changes to έρινεός spontaneously; 2 3 3 sometimes bears fruit from behind the leaves other anomalies; 2 5 3 gratting, 2 5 4, propagation; 2 5. 5. cuttings set in a bulb of $\sigma\kappa(\lambda\lambda\eta)$, 2 5. 6 easily propagated trees should be planted far apart, 2 5 7 low ground suitable, 2 6 6 dates said to vary as much as figs in colour etc., 2 6 12 cuttings set upside down, 2. 7. 1 effects of watering, 2 7 5 use of dust, 2 7. 6 root-pruning etc, 2 8 1 apt to shed immature fruit caprification. 282-4 do and pseudocaprification, 3 3 8 sheds έρινά; 3 4 2 time of budding, 3 5.4 autumn budding, 3 6 2 formation of buds, 3 7. 3 produces tout and 5 hurber; [3. 17 4. a local Idaean kind (see below); 3. 17. 5 do described,] 4 2 3 taste of fruit of σ ή Κυπρία comp., 4 4 4 fruit of ή συκή Ίνδική comp, 4 5 3 grows well in Pontus with shelter, 4 7 7 size of marine trees of island of Tylos comp., 4 13 1 shorter - lived than έρινεός. 4 13 2 short-lived, 4 14 2 apt to get worm-eaten: young plants hable to 'sunscorch'; 4 14 3 destroyed by 'worms'

which breed in it: gets scab in some regions; 4 14, 4-5. other diseases; 4 14, 8 effects on fruit of rain and drought; 4 14 10 infested by knips, 4. 14 12 suffers most from special winds, 4 15. 2 survives stripping of bark for some time; 4 15 2 instance of bark growing agam; 4. 16 1 survives splitting of stem, 5 3 3 character of wood, 5 6 1 wood strong only against a vertical strain; 5 9.5 wood makes pungent smoke; 5 9 6. wood good for kindling furnaces; 7 13 2. root of ἀσφόδελος eaten with figs

συκή (2) ή Αίγυπτία (= κερωνία 1 11 2.), carob, Ceratonia Sulqua συκή (3) ή Ίδαία (fruit σύκον), Ame-

lanchier vulgaris 3. 17 4-5. described.

συκή (4) ή Ίνδική, banyan, Ficus bengalensis

1 7.3 roots again from branches;

4 4 4-5 described συκή (5) ή Κυπρία, sycamore, Ficus Sycamorus var

4 2 3 described.

συκή (6) ή Δακωνική, Freus Carrea

var 2.7 1 water-loving; 2 8 1. caprification not used

συκή (7) (ή 'Αραβική), Freus Carica var ? 4 7 8 an evergreen Arabian kind

(συκή (8) (° an alcyonidian polyp) 4 6 2 peculiar to certain waters; 4 6 9 described)

σφάκος, sage, Salvia calycina 6 1 4 a spineless wild undershrub, 6 2 5. like cultivated ἐλελίσφακος: leaf of one kind of

πράσιον comp σφενδαμνος, maple, Acer monspessulanum

3 3 1 a tree of mountain and plan; 3 3 8 doubt whether it has a flower, 3 4 4 time of fruiting, 3 6 1 slow-grow-ing (?); 3 6 5 roots shallow and few according to Arcadians, 3 11 1-2. described; 5 1 2 tune of cutting timber, 5 1 4

do.: 5 3 3. character of timber: 5 7.6 uses of wood
oxivos (fruit oxivis 9 4.7), mastich,
Pistacia Lentiscus

9 1 2 produces a gum, 9 4.7 λιβανωτός comp. by some

σχοίνος (1), rush, Juncus spp etc.
1 5 3 not jointed; 1 8 1 no knots, 4.8 1. in list of ta λοχμώδη, 4 12 1-3. kinds distinguished

σχοίνος (2) (ὁ εὐώδης ?), ginger-grass, Cymbopogon Schoenanthus

9. 7. 1 habitat (E of Lebanon): described fragrance; 9 7. 3 in list of ἀρώματα

σχοίνος (3) ὁ κάρπιμος, (= μελαγκραvis, 4.12 1), bog-rush, Schoenus nigricans

4. 12. 1-3 described

σχοίνος (4) ὁ ὁλόσχοινος, Scirpus Holoschoenus

4. 12. 2 described; 9 12. 1 used for stringing pieces of χαμαιλέων δ λευκός

σχοῖνος (5) ὁ ὀξύς, Iuneus acutus 4, 12, 1-2 described.

σχοίνος (6) 4 7 3 stone 'σχοΐνοι' in 'Red Sea ')

τέρμινθος (τερέβινθος), terebinth, Pistacra Terebinthus

1. 9 3 evergreen (wild form). 3 2 6 characteristic of Syria, 3 3 1 a mountain tree; 3 3 3 evergreen, 3 4.2 time of budding, 3 4 4 time of fruiting, 3 15 3-4 described, 4 4 7 τ ή Ίνδικη comp; 4 16 1-2 not injured by cutting for resin, 5 3 2 character of wood uses, 5 7 7 fruit and resin useful, wood not used in crafts, 9 1 2 sap gummy, 9 1 6 time of tapping, 9 2 1 method of tapping; 9 2 2 produces best resin (pyrivy); 9 2 2 said to be burnt for pitch (πίττα) in Syria: cf 3 2 6, 9 3 4 method of preparing pitch in Syria, 9 4 7 σμύρνα comp by some, 9 4 8 some say σμύρνα = τ . 9 5 1 fruit of βάλσαμον comp.

τετραγωνία, Euonymus latifolius 3. 4. 2 time of budding; 3. 4. 6 time of fruiting

τετράλιξ, yellow star-thistle, Centaurea solstitualis

4 4 a 'thistle-like' plant: time of growing.

τεύτλις (= τεύτλον)

7. 7. 2 a λάχανον; needs cooking. τεύτλον (τεύτλιον) = τεύτλις, beet, Beta maritima

1. 3 2 becomes large in cultivation, 153. stem fleshy; 166 root single, but with large side-growths, 1 6 7 root fleshy; 1. 9. 2, cf 1. 3 2; 1 10 4. leaves fleshy, 7. 1. 2-3 time of seaves nessly, 7. 1. 2-3 time of sowing and germination; 7.1 5. do; 7.1. 6. germination; 7.2.2 root makes offsets; 7.2.5-6. root described, 7.2.7. root of λάπαθον comp., 7.2.8. root; 7.3.2. seeds; 7.4.1 several kinds; 7.4.4. two kinds, το λευκόν (Συκελικόν) and τὸ μέλαν; 7.5.5 seed lears wall 7. 5 5 seed keeps well

τήλις (= βουκέρας), fenugreek, Trugonella Foenum-graecum

3 17 2 leaf of κολουτέα (κολοιτία (1) comp

(produces ιπποφαές ? τιθύμαλλος 9 15 6 see note) (= μηκωνιον 9 8 2), spurge, Euphorbia Peplus etc

9 8 2 junce of stalk, how collected; 9 11 1 several kinds; 9 11 5 do, leaf of στρύχνος δ ύπνωδης comp, 9 11.7-9 kinds (see below), 9 15.6. Arcadian: localities

τιθύμαλλος ο άρρην, Επρhorbia Sib-

thorpu 11 8 described: medicinal иье.

τιθύμαλλος ὁ μυρτίτης (fruit κάρυον 9 11 9), Euphorbia Myrsinites 9 11 9 described: habitat: time of gathering medicinal use

τιθυμαλλος ο παράλιος, sea-spurge, Euphorbia Paralias

9. 11. 7 described medicinal nse.

τιφη, one-seeded wheat, Triticum monococcum 1. 6 5 roots numerous; 2. 4 1.

3 16 3. described called apía by Dorians

φελλός, (?= ίψος cf Plin 16 98), cork-oak, Quercus Suber

1.27 bark, 1 5 2 bark rough and fleshy, 1 5 4 wood light, 3 17 1 grows in Tyrrhenia. described, 4 15 1 is the stronger for having its bark stripped, 5 3 6 wood of polvis (1) comp

φέως (= στοιβη 6 1. 3), Potersum spinosum

φηγός (= δρῦς ἡ ἀγρία), Valonia oak, Quercus Aegilops

3. 3. 1 a mountain tree, 3 4 2 time of budding; 3 6 1. slow-growing (?), 3 8 2 one of the five 'Idaean' kinds of oak described fruit; 3.8 3-4. acorns; 3 8. 4 timber, 3 8 7 one of the four 'Macedonian' kinds of oak, 4 13 2, ancient trees at Ilium, 5 1, 2 time of cutting timber

φιλύκη, alaternus, Rhamnus Ala-

ternus

1.9 3 evergreen, 3 3 1 a mountain tree, 3 3 3 evergreen, 3 4 2 time of budding; 3 4 4 time of fruiting; 5 6 2 easiest wood for turning

φίλυμα (= φιλυρα ή θηλεια), lime (or silver lime), Tilia platyphyllos,

(or tomentosa)

1.5 2 bark thin bark in layers, 1 5 5 wood phable, 1 10 1 leaves inverted in summer, 1 12 4 leaves, but not frut, eaten by animals, 3 3 1 a mountain tree, 3 4 2 time of budding, 3 4 6 time of fruiting fruit inedible, 3 5 5-6 winter-buds, 3 10 4-5 described 'male' and 'female' forms distinguished (see below), 3 11 1 bark of σφενδαμνος comp, 3 13 1 bark of κέρασος comp , 3 13 3 grows where κέρασος grows, 3.17 5 leaf of συκή ή Ίδαία comp, 441 hard to grow in Babylon, 4 5 1 in hst of Northern trees, 4 8 1 grows partially in water, 4 15 1 outer bark can be stripped,

4 15 2 survives stripping of bark for some time; 5 1. 2, time of cutting timber, 5 1.4. do, 5 3 3 character of wood; 5 5. 1 wood easy to work; blunts tools, 5 6 2 wood soft and easy to work; 5 7 5 various uses of wood and bark, 5 9 7 wood used for fire-sticks

φίλυρα ή ἄρρην (= φιλυρεα), mock-privet, Phillyrea media

3. 10 4-5. distinguished from φ ή θήλεια

φίλυρα ἡ θήλεια (= φίλυρα), silver-lime, Tilia tomentosa 3.10 4-5 distinguished from φ ἡ

ἄρρην

φιλυρέα, mock-privet, Phillyrea medra 1. 9 3 evergreen, 3. 4 6. (?)

time of fruiting

φλεώ (φλεώς), Erranthus Ravennae 481 in list of τὰ λοχμώδη, 4101 in list of plants of Lake Copais, 4 10 4 described, 4 10 6 grows both on land and in water, grows on the floating islands of Lake Copais, 4 10 7. part used for food, 4 11 12 toliage of some καλαμοι comp

φλόγινον (= φλοξ), wall-flower, Cheuranthus Cherri

8 1-2, a coronary plant. flowering time φλόμος ή μέλαινα, mullein, Verbascum

sinuatum

9. 12 3 leaf of μηκων ή κερατίτις

φλόξ (= φλόγινον), Cheiranthus Cheiri wall-flower.

6 6 2 a cultivated under-shrub: a coronary plant seen 6 6 11 grown from seed scentless:

φοινιξ (1), date-palm, Phoenix dactylifera

2 7 'flesh' turns to wood: 1 4 3 (?) tolerant of sea-water, 1.5 1 few branches; 1.5 2 rough bark, 1 5 3 wood fibrous, 1 6 2 core not distinguishable, 1.9 1 growth chiefly upwards, 1 9 3 evergreen, 1 10 5 reedy leaves; 1111 seed immediately within envelope. envelope not single;

1. 11 3 seed solid and 'dry' throughout; 1. 13 5 'male' only flowers, 1142 bears fruit at top, 2 2 2 propagation, 2 2 6 seeds come true, 2 2 8 z 2 o seeds come true, 2 2 8 effect of locality, 2 2 10 effects of climate, 2 6 1 propagation from fruit, 2 6 2 propagation from 'head', 2 6 3 cultivation, 2 6 4 do, 2 6 5 cultivation in Syria, 2 6 8 vanious kinds, [2 6 9 branching kind see коикьофорог], [2 6 10. shrubby kind see kots]; 2612 cuttings set upside down. 2 8 1 apt to shed immature 2 8 1 apt to shed immature fruit; 2 8 4 artificial fertilisation; 3 3 5 not fruitful wherever it grows, 3 13 7 dwarf form (? φ δ χαμαιροφός), 4 1 5. cf 2 2 10, 4 2 7 κουκόφορου comp, 4 3 1 grows in parts of Libya, 4 3 5 grows well in waterless Libya. salt in soil, water supply, 4 3 7 kept alive by dew in dry regions; 4 4 3. sown in pots, 4.4 13 dangerous to eat unripe dates (in Gedto eat unripe dates (in Gedrosia), 4.7 8 occurs on the island of Tylos, 4 13 2 story of the very old ϕ on Delos, 4 14 8 if topped, becomes barren, but is not destroyed. 4 15. 2 survives stripping of bark; 5 3. 6. character of wood used for images; 5 6 1 wood strong behaviour under pressure 5 9 4 wood makes a very evil smoke when buint for charcoal, 6 4 11 seed-vessel of sacros (1), when stripped of seeds, comp to 'bram' of ϕ , 9 4 4 mats in Arabia made of leaves of φ.

φοΐνιξ (2), Nannorhops ritchiana

4 4 8 Bactrian

φοινιέ (3), ὁ χαμαιρριφής, dwarf palm, Chamaerops humilis

2. 6 11. described, 3 13 7 (?) φοῖνιξ (4), Callophyllis lacmata 4, 6 2, peculiar to certain waters, 4 6. 10 described

φόνος (= άτρακτυλις 6 4 6), distaffthistle, Carthamus lanatus

6 4.6 reason for name

φύκος (1) τὸ πλατύφυλλον (= ζώστηρ 6 2. = πράσον (2)), grass-wrack, Posidonia oceanica

4.6 2 occurs generally in Greek waters . root described.

φύκος (2) θαυμαστόν το μέγεθος, τι-

band-weed, (= πράσον (3)), Laminaria saccharina 4.6 4 described grows in Atlantic washed into Mediterranean:

4 7 1 refers to 4 6 4. φῦκος (3) τὸ πόντιον

4 6 4 collected by sponge-fishers φῦκος (4) τὸ τριχόφυλλον, Cystoserra foeniculosa

4 6 3 described.

φῦκος (5), litmus, Roccella tinctoria 4 6 5 Cretan. dye described φῦκος (6), grass-wrack, Cymodocea nodosa (and Zostera marina)

4 6. 6 described: comp to ἄγρωστις

χαλβάνη, see πάνακες (τὸ Σύριον) χάλκειος, Carlina corymbosa 6.4 3 a 'thistle-like' plant χαμαίβατος (= βατος), Rubus ulmi-

folius 3 18 4 described.

χαμαιδάφνη, periwinkle, Vinca herbacea 3 18 13 leaf of evώνυμος comp

χαμαιδρυς, germander, Teucrium Chamaedrys

9 9 5 medicinal use described

χαμαιλεων, chamaeleon 6 4 3 a 'thistle-like' plant, but leaves not spinous (see n. on 6 4 8), 6 4 8 flower turns into 'down', 9 12 1-2, kinds (see below)

χαμαιλεων ο λευκός (= ἄκανθα (9) 9 12 1 = ἄκανος = ἰξια (2) = iξίνη), pine-thistle, Atractylis

gummı fer a

9 12 1 described medicinal use: fatal to dogs and pigs how administered grows everywhere

χαμαιλεων ο μιλας. Cardonatrum

corymbosum

9. 12 2 described: medicinal use habitat fatal to dogs: 9 14. 1 how long drug will keep

χελιδόνιον, greater celandine, Chelidonium maius

7 15 1. flowering depends on the heavenly bodies. χόνδρυλλα, Chondrilla juncea

 7 1. a λάχανον classed as 'chicory-like' from its leaves; 7. 11 4 growth of ὑποχοιρίς contrasted.

ψευδοδίκταμνον, Ballota acetabulosa 9.16 2 comp with δίκταμνον as to appearance and properties said by some to be only a degenerate form of δίκταμνον · method of keeping.

йкіног, basil, Ocymum basilicum 1 6.6-7 root woody, 1.10.7

time of leaf-growth, 7. 1 2-3 time of sowing and germins. tion; 721. propagation, 7.24. grows again when stem is cut; 2 7-8 root described, 731. long in flower, 7 3 2-3 seeds described, 7 3. 4 seed very abundant seed borne at top. abindant seed borne at 60β, 7 4 1 only one kind, 7, 5, 2, watered at mid-day, 7, 5, 4, effect of hot weather; 7, 5, 5, seed does not keep well; 7, 7, 2, leaf of κόρχορο comp, 7, 9, 2, degrees heave at home in Supression. flowers borne in succession, cf. 7 3 1; 9 18.5. leaf of appendγονον and of θηλύγονον comp. axpos, Lathyrus Ochius

8 1 3 sown early, 8 3.1. leaf; 8 3 2 stem; 8.10 5. infested by 'worms.'

APPENDIX OF UNNAMED PLANTS

The following plants (arranged in the order of mention) which are described or indicated, but not named, in the Enquiry, seem possible to identify -

- (όμοιον τῶ αράκω), tine-tare, Lαthyrus tuberosus
 - 1 6 12 root described
- 2. (ύλημα ίδιον τι περι Μέμφιν), Μιmosa asperata
- 4 2 11. described 'sensitive' μεγαλόκαρπον), Jack-3. (δενδρον
- fruit, Artocarpus integrifolia 4. 4 5 used for food by Indian
- 4 (φυλλον τοίς των στρουθών πτεροίς όμοιον), banana, Musa saprentum
- 4. 4 5 described (καρπὸς σκολιὸς ἐσθιόμενος δὲ yaukus), mango, Mangriera in-
- dica4. 4. 5 fruit described, causes
- dysentery 6. (καρπός όμοιος τοῖς κρανεοις). 10jube, Zizyphus Jujuba 4. 4. 5

- 7 (όμοιον τερμίνθω), pistachio-nut. Pıstacıa vera
- 4 4 7 described
- 8 (ὅμοιον τῆ όψει καὶ το βούκερας), Phaseolus Mungo
 - 4. 4 9-10 called by Hellenes pakos, and similarly used
- (ἄκανθα ἐψ΄ ἦς γίνεται δάκρυον) (= ἄκανθα (4) ἡ Ἰνδική), Balsamo-dendron Mulul
 - 4 4 12 grows in Aria: scribed
- 10. (ύλημα ήλικον ράφανος), Αβαtoetida, Scorodosma foetidum
 - 4 4 12 described: fatal to horses.
- 11 (όμοιον τῆ δάφνη φύλλον ἔχον). Nerum odorum 4 4 13 effect on animals
- 12α (δένδρα μέγαλα), mangrove, Bruginera gymnorhiza 4 7. 4. described.
